# 001 | Whole-person quality of life

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 001, Whole-person quality of life. Native state: Health, function, time, autonomy, relationships, safety, income, environment and future capacity. Potential direct or institutional human pathway: Whole-person quality of life interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Improvement in one life dimension paid for by another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-life state model plus coordinated capacity across health, time, income and environment can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, security, time and relational capacity all improve without hidden depletion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 001 | Whole-person quality of life

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 001, Whole-person quality of life. Native state: Health, function, time, autonomy, relationships, safety, income, environment and future capacity. Potential direct or institutional human pathway: Whole-person quality of life interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Improvement in one life dimension paid for by another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-life state model plus coordinated capacity across health, time, income and environment can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, security, time and relational capacity all improve without hidden depletion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 001 | Whole-person quality of life

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 001, Whole-person quality of life. Native state: Health, function, time, autonomy, relationships, safety, income, environment and future capacity. Potential direct or institutional human pathway: Whole-person quality of life interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Improvement in one life dimension paid for by another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-life state model plus coordinated capacity across health, time, income and environment can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, security, time and relational capacity all improve without hidden depletion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 001 | Whole-person quality of life

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 001, Whole-person quality of life. Native state: Health, function, time, autonomy, relationships, safety, income, environment and future capacity. Potential direct or institutional human pathway: Whole-person quality of life interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Improvement in one life dimension paid for by another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-life state model plus coordinated capacity across health, time, income and environment can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, security, time and relational capacity all improve without hidden depletion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 001 | Whole-person quality of life

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 001, Whole-person quality of life. Native state: Health, function, time, autonomy, relationships, safety, income, environment and future capacity. Potential direct or institutional human pathway: Whole-person quality of life interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Improvement in one life dimension paid for by another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-life state model plus coordinated capacity across health, time, income and environment can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, security, time and relational capacity all improve without hidden depletion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 001 | Whole-person quality of life

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 001, Whole-person quality of life. Native state: Health, function, time, autonomy, relationships, safety, income, environment and future capacity. Potential direct or institutional human pathway: Whole-person quality of life interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Improvement in one life dimension paid for by another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-life state model plus coordinated capacity across health, time, income and environment can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, security, time and relational capacity all improve without hidden depletion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 002 | Nutrition and metabolism

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 002, Nutrition and metabolism. Native state: Diet, metabolic state, affordability, culture, timing, microbiome and activity. Potential direct or institutional human pathway: Nutrition and metabolism interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Biological benefit shifts cost to adherence, affordability or another metabolic pathway.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Adaptive nutrition and access architecture with feedback and affordability constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Metabolic markers, adherence, affordability and quality of life improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 002 | Nutrition and metabolism

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

# 003 | Sleep and recovery

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 003, Sleep and recovery. Native state: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve. Potential direct or institutional human pathway: Sleep and recovery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: More sleep opportunity can displace work, care or circadian alignment.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Recovery controller integrating timing, environment, workload and physiology can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Recovery, cognition, safety and schedule burden improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 003 | Sleep and recovery

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 003, Sleep and recovery. Native state: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve. Potential direct or institutional human pathway: Sleep and recovery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: More sleep opportunity can displace work, care or circadian alignment.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Recovery controller integrating timing, environment, workload and physiology can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Recovery, cognition, safety and schedule burden improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 003 | Sleep and recovery

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 003, Sleep and recovery. Native state: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve. Potential direct or institutional human pathway: Sleep and recovery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: More sleep opportunity can displace work, care or circadian alignment.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Recovery controller integrating timing, environment, workload and physiology can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Recovery, cognition, safety and schedule burden improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 003 | Sleep and recovery

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 003, Sleep and recovery. Native state: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve. Potential direct or institutional human pathway: Sleep and recovery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: More sleep opportunity can displace work, care or circadian alignment.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Recovery controller integrating timing, environment, workload and physiology can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Recovery, cognition, safety and schedule burden improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 003 | Sleep and recovery

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 003, Sleep and recovery. Native state: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve. Potential direct or institutional human pathway: Sleep and recovery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: More sleep opportunity can displace work, care or circadian alignment.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Recovery controller integrating timing, environment, workload and physiology can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Recovery, cognition, safety and schedule burden improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 003 | Sleep and recovery

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 003, Sleep and recovery. Native state: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve. Potential direct or institutional human pathway: Sleep and recovery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: More sleep opportunity can displace work, care or circadian alignment.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Recovery controller integrating timing, environment, workload and physiology can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Recovery, cognition, safety and schedule burden improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 004 | Reproductive and sexual health

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 004, Reproductive and sexual health. Native state: Endocrine, reproductive, sexual, relational, consent, fertility and safety state. Potential direct or institutional human pathway: Reproductive and sexual health interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Local treatment shifts hormonal, relational, financial or future burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Longitudinal reproductive-state architecture plus consent/safety controls can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, safety and desired reproductive outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 004 | Reproductive and sexual health

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 004, Reproductive and sexual health. Native state: Endocrine, reproductive, sexual, relational, consent, fertility and safety state. Potential direct or institutional human pathway: Reproductive and sexual health interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Local treatment shifts hormonal, relational, financial or future burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Longitudinal reproductive-state architecture plus consent/safety controls can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, safety and desired reproductive outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 004 | Reproductive and sexual health

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 004, Reproductive and sexual health. Native state: Endocrine, reproductive, sexual, relational, consent, fertility and safety state. Potential direct or institutional human pathway: Reproductive and sexual health interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Local treatment shifts hormonal, relational, financial or future burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Longitudinal reproductive-state architecture plus consent/safety controls can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, safety and desired reproductive outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 004 | Reproductive and sexual health

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 004, Reproductive and sexual health. Native state: Endocrine, reproductive, sexual, relational, consent, fertility and safety state. Potential direct or institutional human pathway: Reproductive and sexual health interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Local treatment shifts hormonal, relational, financial or future burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Longitudinal reproductive-state architecture plus consent/safety controls can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, safety and desired reproductive outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 004 | Reproductive and sexual health

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 004, Reproductive and sexual health. Native state: Endocrine, reproductive, sexual, relational, consent, fertility and safety state. Potential direct or institutional human pathway: Reproductive and sexual health interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Local treatment shifts hormonal, relational, financial or future burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Longitudinal reproductive-state architecture plus consent/safety controls can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, safety and desired reproductive outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 004 | Reproductive and sexual health

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 004, Reproductive and sexual health. Native state: Endocrine, reproductive, sexual, relational, consent, fertility and safety state. Potential direct or institutional human pathway: Reproductive and sexual health interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Local treatment shifts hormonal, relational, financial or future burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Longitudinal reproductive-state architecture plus consent/safety controls can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, autonomy, safety and desired reproductive outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 005 | Disability and accessibility

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 005, Disability and accessibility. Native state: Capabilities plus environmental demands, interfaces and support. Potential direct or institutional human pathway: Disability and accessibility interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Person compensates for inaccessible environment.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Environment-first accessibility architecture plus assistive capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability, independence and participation rise while compensatory load falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 005 | Disability and accessibility

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 005, Disability and accessibility. Native state: Capabilities plus environmental demands, interfaces and support. Potential direct or institutional human pathway: Disability and accessibility interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Person compensates for inaccessible environment.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Environment-first accessibility architecture plus assistive capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability, independence and participation rise while compensatory load falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 005 | Disability and accessibility

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

Candidate Atlas goal: Capability, independence and participation rise while compensatory load falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 006 | Mobility and physical function

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 006, Mobility and physical function. Native state: Strength, pain, balance, endurance, environment, assistive devices. Potential direct or institutional human pathway: Mobility and physical function interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Function gains can increase pain, fatigue or caregiver burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Adaptive rehabilitation plus environment and device redesign can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, comfort, autonomy and caregiver load improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 006 | Mobility and physical function

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 006, Mobility and physical function. Native state: Strength, pain, balance, endurance, environment, assistive devices. Potential direct or institutional human pathway: Mobility and physical function interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Function gains can increase pain, fatigue or caregiver burden.

Candidate Atlas goal: Function, comfort, autonomy and caregiver load improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 006 | Mobility and physical function

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 006, Mobility and physical function. Native state: Strength, pain, balance, endurance, environment, assistive devices. Potential direct or institutional human pathway: Mobility and physical function interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Function gains can increase pain, fatigue or caregiver burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Adaptive rehabilitation plus environment and device redesign can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, comfort, autonomy and caregiver load improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 007 | Family and caregiving

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 007, Family and caregiving. Native state: Needs, capacities, schedules, money, emotional load, dependency and support network. Potential direct or institutional human pathway: Family and caregiving interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: One caregiver silently absorbs system failure.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Care-load ledger, shared coordination and external capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Dependent wellbeing and caregiver wellbeing both improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 007 | Family and caregiving

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 007, Family and caregiving. Native state: Needs, capacities, schedules, money, emotional load, dependency and support network. Potential direct or institutional human pathway: Family and caregiving interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: One caregiver silently absorbs system failure.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Care-load ledger, shared coordination and external capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Dependent wellbeing and caregiver wellbeing both improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 007 | Family and caregiving

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 007, Family and caregiving. Native state: Needs, capacities, schedules, money, emotional load, dependency and support network. Potential direct or institutional human pathway: Family and caregiving interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: One caregiver silently absorbs system failure.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Care-load ledger, shared coordination and external capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

If unmet, record the limiting constraint and next ethically admissible construction search.

# 007 | Family and caregiving

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 007, Family and caregiving. Native state: Needs, capacities, schedules, money, emotional load, dependency and support network. Potential direct or institutional human pathway: Family and caregiving interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: One caregiver silently absorbs system failure.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Care-load ledger, shared coordination and external capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Dependent wellbeing and caregiver wellbeing both improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 007 | Family and caregiving

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 007, Family and caregiving. Native state: Needs, capacities, schedules, money, emotional load, dependency and support network. Potential direct or institutional human pathway: Family and caregiving interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: One caregiver silently absorbs system failure.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Care-load ledger, shared coordination and external capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Dependent wellbeing and caregiver wellbeing both improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 007 | Family and caregiving

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 007, Family and caregiving. Native state: Needs, capacities, schedules, money, emotional load, dependency and support network. Potential direct or institutional human pathway: Family and caregiving interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: One caregiver silently absorbs system failure.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Care-load ledger, shared coordination and external capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Dependent wellbeing and caregiver wellbeing both improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 008 | Safety and personal security

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 008, Safety and personal security. Native state: Threat exposure, environment, support, mobility and response capacity. Potential direct or institutional human pathway: Safety and personal security interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Protection shifts restriction or surveillance burden onto protected person.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Safety architecture that increases protection without reducing autonomy can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Threat falls while freedom, privacy and response burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 008 | Safety and personal security

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 008, Safety and personal security. Native state: Threat exposure, environment, support, mobility and response capacity. Potential direct or institutional human pathway: Safety and personal security interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Protection shifts restriction or surveillance burden onto protected person.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Safety architecture that increases protection without reducing autonomy can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Threat falls while freedom, privacy and response burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 008 | Safety and personal security

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 008, Safety and personal security. Native state: Threat exposure, environment, support, mobility and response capacity. Potential direct or institutional human pathway: Safety and personal security interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Protection shifts restriction or surveillance burden onto protected person.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Safety architecture that increases protection without reducing autonomy can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Threat falls while freedom, privacy and response burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 008 | Safety and personal security

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 008, Safety and personal security. Native state: Threat exposure, environment, support, mobility and response capacity. Potential direct or institutional human pathway: Safety and personal security interacts with a person through the native system, if the linkage is empirically identified.

# 008 | Safety and personal security

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 008, Safety and personal security. Native state: Threat exposure, environment, support, mobility and response capacity. Potential direct or institutional human pathway: Safety and personal security interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Protection shifts restriction or surveillance burden onto protected person.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Safety architecture that increases protection without reducing autonomy can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Threat falls while freedom, privacy and response burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 009 | Housing and domestic environment

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 009, Housing and domestic environment. Native state: Shelter, cost, commute, safety, air, heat, crowding and social context. Potential direct or institutional human pathway: Housing and domestic environment interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Affordability, commute, health and neighborhood burdens trade places.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-cost housing and location architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Housing quality, affordability, access and neighborhood outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 009 | Housing and domestic environment

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Candidate Atlas goal: Housing quality, affordability, access and neighborhood outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 010 | Human longevity and life-course planning

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 010, Human longevity and life-course planning. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity. Potential direct or institutional human pathway: Human longevity and life-course planning interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Longer life shifts burden to morbidity, savings or care system.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Life-course capital and care architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Added years are healthy, funded, connected and autonomous. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 010 | Human longevity and life-course planning

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 010, Human longevity and life-course planning. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity. Potential direct or institutional human pathway: Human longevity and life-course planning interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Longer life shifts burden to morbidity, savings or care system.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Life-course capital and care architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Added years are healthy, funded, connected and autonomous. Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Life-course capital and care architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Added years are healthy, funded, connected and autonomous. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 010 | Human longevity and life-course planning

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 010, Human longevity and life-course planning. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity. Potential direct or institutional human pathway: Human longevity and life-course planning interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Longer life shifts burden to morbidity, savings or care system.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Life-course capital and care architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Added years are healthy, funded, connected and autonomous. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 011 | Psychology and social legibility

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: High function hides biological and relational cost.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 011 | Psychology and social legibility

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: High function hides biological and relational cost.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 011 | Psychology and social legibility

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: High function hides biological and relational cost.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 011 | Psychology and social legibility

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: High function hides biological and relational cost.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 011 | Psychology and social legibility

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: High function hides biological and relational cost.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 011 | Psychology and social legibility

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: High function hides biological and relational cost.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 012 | Identity and self-model

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 012, Identity and self-model. Native state: Attributes, history, roles, values, capabilities and contexts. Potential direct or institutional human pathway: Identity and self-model interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Recognition in one schema suppresses other valid dimensions.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Selective multi-context identity graph with provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility and autonomy improve without forced overexposure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 012 | Identity and self-model

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 012, Identity and self-model. Native state: Attributes, history, roles, values, capabilities and contexts. Potential direct or institutional human pathway: Identity and self-model interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Recognition in one schema suppresses other valid dimensions.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

If unmet, record the limiting constraint and next ethically admissible construction search.

# 013 | Relationships and intimacy

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 013 | Relationships and intimacy

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 013 | Relationships and intimacy

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 013 | Relationships and intimacy

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 013 | Relationships and intimacy

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 013 | Relationships and intimacy

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 014 | Parenting and child development

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 014 | Parenting and child development

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 014 | Parenting and child development

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 014 | Parenting and child development

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 014 | Parenting and child development

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 014 | Parenting and child development

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 015 | Purpose and self-actualization

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 015, Purpose and self-actualization. Native state: Capabilities, values, opportunity, health, autonomy and social contribution. Potential direct or institutional human pathway: Purpose and self-actualization interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Achievement can be purchased with health or belonging.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-person capability architecture and burden guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Achievement, health, autonomy and contribution improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 015 | Purpose and self-actualization

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 015, Purpose and self-actualization. Native state: Capabilities, values, opportunity, health, autonomy and social contribution. Potential direct or institutional human pathway: Purpose and self-actualization interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

# 016 | Existential wellbeing

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 016, Existential wellbeing. Native state: Meaning, mortality awareness, belonging, agency and life coherence. Potential direct or institutional human pathway: Existential wellbeing interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Meaning needs displaced into consumption, work or crisis care.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Voluntary meaning-reflection and support architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Distress falls while agency, belonging and functioning improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 016 | Existential wellbeing

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 016, Existential wellbeing. Native state: Meaning, mortality awareness, belonging, agency and life coherence. Potential direct or institutional human pathway: Existential wellbeing interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Meaning needs displaced into consumption, work or crisis care.

# 016 | Existential wellbeing

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 016, Existential wellbeing. Native state: Meaning, mortality awareness, belonging, agency and life coherence. Potential direct or institutional human pathway: Existential wellbeing interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Meaning needs displaced into consumption, work or crisis care.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Voluntary meaning-reflection and support architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Distress falls while agency, belonging and functioning improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 017 | Spiritual life

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 017, Spiritual life. Native state: Belief, practice, meaning, community, conscience and autonomy. Potential direct or institutional human pathway: Spiritual life interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Community benefit can shift burden to autonomy or dissent.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Voluntary, transparent, safeguarding-centered spiritual/community architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Meaning and belonging improve without coercion or exclusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 017 | Spiritual life

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

Adapter 017, Spiritual life. Native state: Belief, practice, meaning, community, conscience and autonomy. Potential direct or institutional human pathway: Spiritual life interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Community benefit can shift burden to autonomy or dissent.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Voluntary, transparent, safeguarding-centered spiritual/community architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Meaning and belonging improve without coercion or exclusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 017 | Spiritual life

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 017, Spiritual life. Native state: Belief, practice, meaning, community, conscience and autonomy. Potential direct or institutional human pathway: Spiritual life interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Community benefit can shift burden to autonomy or dissent.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Voluntary, transparent, safeguarding-centered spiritual/community architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Meaning and belonging improve without coercion or exclusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 017 | Spiritual life

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 017, Spiritual life. Native state: Belief, practice, meaning, community, conscience and autonomy. Potential direct or institutional human pathway: Spiritual life interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Community benefit can shift burden to autonomy or dissent.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Voluntary, transparent, safeguarding-centered spiritual/community architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Meaning and belonging improve without coercion or exclusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 017 | Spiritual life

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 017, Spiritual life. Native state: Belief, practice, meaning, community, conscience and autonomy. Potential direct or institutional human pathway: Spiritual life interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Community benefit can shift burden to autonomy or dissent.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Voluntary, transparent, safeguarding-centered spiritual/community architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Meaning and belonging improve without coercion or exclusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 018 | Religion and community institutions

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 018, Religion and community institutions. Native state: Doctrine, governance, resources, safeguarding and member experience. Potential direct or institutional human pathway: Religion and community institutions interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Institutional continuity can externalize harm or dissent costs.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Transparent governance, reporting, safeguarding and exit rights can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Community value rises while coercion and hidden harm fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 018 | Religion and community institutions

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 018, Religion and community institutions. Native state: Doctrine, governance, resources, safeguarding and member experience. Potential direct or institutional human pathway: Religion and community institutions interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Institutional continuity can externalize harm or dissent costs.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

Adapter 020, Trust and fidelity between people. Native state: History, promises, evidence, uncertainty and reciprocity. Potential direct or institutional human pathway: Trust and fidelity between people interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Trust is maintained by one side absorbing ambiguity or proof burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Dynamic provenance and expectation architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Trust, autonomy and verification cost improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 020 | Trust and fidelity between people

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 020, Trust and fidelity between people. Native state: History, promises, evidence, uncertainty and reciprocity. Potential direct or institutional human pathway: Trust and fidelity between people interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Trust is maintained by one side absorbing ambiguity or proof burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Dynamic provenance and expectation architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Trust, autonomy and verification cost improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 021 | Healthcare delivery

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 021, Healthcare delivery. Native state: Clinical state, logistics, caregiver capacity, finance and post-discharge environment. Potential direct or institutional human pathway: Healthcare delivery interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Hospital optimization shifts work to home/caregiver.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential discharge/care orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, readmission risk, caregiver load and cost improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 021 | Healthcare delivery

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 021, Healthcare delivery. Native state: Clinical state, logistics, caregiver capacity, finance and post-discharge environment. Potential direct or institutional human pathway: Healthcare delivery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Hospital optimization shifts work to home/caregiver.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential discharge/care orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, readmission risk, caregiver load and cost improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 021 | Healthcare delivery

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 021, Healthcare delivery. Native state: Clinical state, logistics, caregiver capacity, finance and post-discharge environment. Potential direct or institutional human pathway: Healthcare delivery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Hospital optimization shifts work to home/caregiver.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential discharge/care orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, readmission risk, caregiver load and cost improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 021 | Healthcare delivery

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 021, Healthcare delivery. Native state: Clinical state, logistics, caregiver capacity, finance and post-discharge environment. Potential direct or institutional human pathway: Healthcare delivery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Hospital optimization shifts work to home/caregiver.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential discharge/care orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, readmission risk, caregiver load and cost improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 021 | Healthcare delivery

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 021, Healthcare delivery. Native state: Clinical state, logistics, caregiver capacity, finance and post-discharge environment. Potential direct or institutional human pathway: Healthcare delivery interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Hospital optimization shifts work to home/caregiver.

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential discharge/care orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, readmission risk, caregiver load and cost improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 021 | Healthcare delivery

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 021, Healthcare delivery. Native state: Clinical state, logistics, caregiver capacity, finance and post-discharge environment. Potential direct or institutional human pathway: Healthcare delivery interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Hospital optimization shifts work to home/caregiver.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential discharge/care orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Health, readmission risk, caregiver load and cost improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 022 | Diagnostics

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 022, Diagnostics. Native state: Underlying disease state, uncertainty, test characteristics and downstream actions. Potential direct or institutional human pathway: Diagnostics interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: False certainty moves burden to overtreatment or missed disease.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Bayesian multi-source diagnostic schema + uncertainty communication can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Accuracy, timeliness, burden and downstream safety improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 022 | Diagnostics

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

# 024 | Neuroscience and neurodegeneration

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 024, Neuroscience and neurodegeneration. Native state: Neural, glial, vascular, metabolic, network and functional state. Potential direct or institutional human pathway: Neuroscience and neurodegeneration interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Compensatory recruitment hides reserve depletion.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multimodal state estimator + restorative capacity controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function and reserve rise while damage and compensation fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 024 | Neuroscience and neurodegeneration

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 024, Neuroscience and neurodegeneration. Native state: Neural, glial, vascular, metabolic, network and functional state. Potential direct or institutional human pathway: Neuroscience and neurodegeneration interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Compensatory recruitment hides reserve depletion.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multimodal state estimator + restorative capacity controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function and reserve rise while damage and compensation fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 024 | Neuroscience and neurodegeneration

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 024, Neuroscience and neurodegeneration. Native state: Neural, glial, vascular, metabolic, network and functional state. Potential direct or institutional human pathway: Neuroscience and neurodegeneration interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Compensatory recruitment hides reserve depletion.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multimodal state estimator + restorative capacity controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function and reserve rise while damage and compensation fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 024 | Neuroscience and neurodegeneration

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 024, Neuroscience and neurodegeneration. Native state: Neural, glial, vascular, metabolic, network and functional state. Potential direct or institutional human pathway: Neuroscience and neurodegeneration interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Compensatory recruitment hides reserve depletion.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

If unmet, record the limiting constraint and next ethically admissible construction search.

# 025 | Aging biology

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 025, Aging biology. Native state: Coupled damage, repair, senescence, immunity, metabolism and regeneration. Potential direct or institutional human pathway: Aging biology interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Repairing one hallmark moves bottleneck elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Moving-bottleneck RVG controller across damage/repair channels can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Healthspan metrics rise without new dominant damage carrier. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

Candidate Atlas goal: Clearance, tolerance and tissue integrity improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 027 | Infectious disease

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 027, Infectious disease. Native state: Pathogen dynamics, host immunity, behavior, network spread and treatment. Potential direct or institutional human pathway: Infectious disease interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Control shifts burden across people, resistance or livelihoods.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-carrier containment + treatment + livelihood capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Disease burden falls without disproportionate social/economic harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 027 | Infectious disease

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 027, Infectious disease. Native state: Pathogen dynamics, host immunity, behavior, network spread and treatment. Potential direct or institutional human pathway: Infectious disease interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Control shifts burden across people, resistance or livelihoods.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Control shifts burden across people, resistance or livelihoods.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-carrier containment + treatment + livelihood capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Disease burden falls without disproportionate social/economic harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 027 | Infectious disease

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 027, Infectious disease. Native state: Pathogen dynamics, host immunity, behavior, network spread and treatment. Potential direct or institutional human pathway: Infectious disease interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Control shifts burden across people, resistance or livelihoods.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-carrier containment + treatment + livelihood capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Disease burden falls without disproportionate social/economic harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 027 | Infectious disease

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 027, Infectious disease. Native state: Pathogen dynamics, host immunity, behavior, network spread and treatment. Potential direct or institutional human pathway: Infectious disease interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Control shifts burden across people, resistance or livelihoods.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-carrier containment + treatment + livelihood capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Disease burden falls without disproportionate social/economic harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 027 | Infectious disease

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 027, Infectious disease. Native state: Pathogen dynamics, host immunity, behavior, network spread and treatment. Potential direct or institutional human pathway: Infectious disease interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Control shifts burden across people, resistance or livelihoods.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-carrier containment + treatment + livelihood capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Disease burden falls without disproportionate social/economic harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 028 | Microbiome

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 028, Microbiome. Native state: Host physiology plus microbial ecology and diet/environment. Potential direct or institutional human pathway: Microbiome interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Changing one taxon shifts ecosystem function elsewhere.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Functional ecosystem state model and adaptive intervention can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Host outcomes and ecosystem stability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 028 | Microbiome

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 028, Microbiome. Native state: Host physiology plus microbial ecology and diet/environment. Potential direct or institutional human pathway: Microbiome interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Changing one taxon shifts ecosystem function elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Functional ecosystem state model and adaptive intervention can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Host outcomes and ecosystem stability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 028 | Microbiome

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 028, Microbiome. Native state: Host physiology plus microbial ecology and diet/environment. Potential direct or institutional human pathway: Microbiome interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Changing one taxon shifts ecosystem function elsewhere.

### OBSERVATION / RECORD REQUIRED

Investigate whether Functional ecosystem state model and adaptive intervention can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Host outcomes and ecosystem stability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 029 | Genomics and proteomics

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 029, Genomics and proteomics. Native state: Variants, expression, proteins, pathways, context and phenotype. Potential direct or institutional human pathway: Genomics and proteomics interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Marker-driven intervention misses network/context effects.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-omic causal state architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Target outcome improves without network collateral burden. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 029 | Genomics and proteomics

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 029, Genomics and proteomics. Native state: Variants, expression, proteins, pathways, context and phenotype. Potential direct or institutional human pathway: Genomics and proteomics interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Marker-driven intervention misses network/context effects.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

# 030 | Surgery and rehabilitation

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 030, Surgery and rehabilitation. Native state: Anatomy, function, pain, recovery capacity, home support and risk. Potential direct or institutional human pathway: Surgery and rehabilitation interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Technical success shifts burden to recovery/function.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Prehabilitation + procedure + recovery orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Anatomy, function, pain and recovery burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 030 | Surgery and rehabilitation

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 030, Surgery and rehabilitation. Native state: Anatomy, function, pain, recovery capacity, home support and risk. Potential direct or institutional human pathway: Surgery and rehabilitation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Technical success shifts burden to recovery/function.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Prehabilitation + procedure + recovery orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Anatomy, function, pain and recovery burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 030 | Surgery and rehabilitation

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 030, Surgery and rehabilitation. Native state: Anatomy, function, pain, recovery capacity, home support and risk. Potential direct or institutional human pathway: Surgery and rehabilitation interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Technical success shifts burden to recovery/function.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Prehabilitation + procedure + recovery orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Anatomy, function, pain and recovery burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 030 | Surgery and rehabilitation

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 030, Surgery and rehabilitation. Native state: Anatomy, function, pain, recovery capacity, home support and risk. Potential direct or institutional human pathway: Surgery and rehabilitation interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Technical success shifts burden to recovery/function.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Prehabilitation + procedure + recovery orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Anatomy, function, pain and recovery burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 030 | Surgery and rehabilitation

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 030, Surgery and rehabilitation. Native state: Anatomy, function, pain, recovery capacity, home support and risk. Potential direct or institutional human pathway: Surgery and rehabilitation interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Technical success shifts burden to recovery/function.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Prehabilitation + procedure + recovery orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Anatomy, function, pain and recovery burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 030 | Surgery and rehabilitation

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 030, Surgery and rehabilitation. Native state: Anatomy, function, pain, recovery capacity, home support and risk. Potential direct or institutional human pathway: Surgery and rehabilitation interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Technical success shifts burden to recovery/function.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Prehabilitation + procedure + recovery orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Anatomy, function, pain and recovery burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 031 | Early-childhood development and education

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 031, Early-childhood development and education. Native state: Development, safety, language, nutrition, play, attachment and resources. Potential direct or institutional human pathway: Early-childhood development and education interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Academic gains can shift stress to child/family.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Integrated developmental support architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Learning, wellbeing and caregiver capacity improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 031 | Early-childhood development and education

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 031, Early-childhood development and education. Native state: Development, safety, language, nutrition, play, attachment and resources. Potential direct or institutional human pathway: Early-childhood development and education interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Academic gains can shift stress to child/family.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Integrated developmental support architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Learning, wellbeing and caregiver capacity improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 031 | Early-childhood development and education

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 031, Early-childhood development and education. Native state: Development, safety, language, nutrition, play, attachment and resources. Potential direct or institutional human pathway: Early-childhood development and education interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Academic gains can shift stress to child/family.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Integrated developmental support architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Learning, wellbeing and caregiver capacity improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 031 | Early-childhood development and education

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 031, Early-childhood development and education. Native state: Development, safety, language, nutrition, play, attachment and resources. Potential direct or institutional human pathway: Early-childhood development and education interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Academic gains can shift stress to child/family.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Integrated developmental support architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Learning, wellbeing and caregiver capacity improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 031 | Early-childhood development and education

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 031, Early-childhood development and education. Native state: Development, safety, language, nutrition, play, attachment and resources. Potential direct or institutional human pathway: Early-childhood development and education interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Academic gains can shift stress to child/family.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Integrated developmental support architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Learning, wellbeing and caregiver capacity improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

Candidate Atlas goal: Learning, wellbeing and caregiver capacity improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 032 | K-12 education

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 032, K-12 education. Native state: Knowledge, skills, wellbeing, context, resources and learning trajectory. Potential direct or institutional human pathway: K-12 education interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Score gains shift burden to stress, teaching-to-test or exclusion.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Capability graph + adaptive learning + wellbeing constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Learning, wellbeing, teacher load and equity improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 032 | K-12 education

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 032, K-12 education. Native state: Knowledge, skills, wellbeing, context, resources and learning trajectory. Potential direct or institutional human pathway: K-12 education interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Score gains shift burden to stress, teaching-to-test or exclusion.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

Investigate whether Capability graph + adaptive learning + wellbeing constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Learning, wellbeing, teacher load and equity improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 033 | Higher education

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 033, Higher education. Native state: Capability, knowledge, network, finances and career pathways. Potential direct or institutional human pathway: Higher education interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Credential value shifts debt or mismatch to student/employer.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Capability/provenance portfolio + adaptive pathways can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Learning, employability, affordability and wellbeing improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 033 | Higher education

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 033, Higher education. Native state: Capability, knowledge, network, finances and career pathways. Potential direct or institutional human pathway: Higher education interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Credential value shifts debt or mismatch to student/employer.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

# 033 | Higher education

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 033, Higher education. Native state: Capability, knowledge, network, finances and career pathways. Potential direct or institutional human pathway: Higher education interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Credential value shifts debt or mismatch to student/employer.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Capability/provenance portfolio + adaptive pathways can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Learning, employability, affordability and wellbeing improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 034 | Vocational and workforce learning

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 034, Vocational and workforce learning. Native state: Skills, task demand, wages, mobility and employer needs. Potential direct or institutional human pathway: Vocational and workforce learning interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Training success without placement or wage gain.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Skill-to-task provenance and placement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Skill, earnings, job quality and employer performance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 034 | Vocational and workforce learning

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 034, Vocational and workforce learning. Native state: Skills, task demand, wages, mobility and employer needs. Potential direct or institutional human pathway: Vocational and workforce learning interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Training success without placement or wage gain.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Skill-to-task provenance and placement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Skill, earnings, job quality and employer performance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 034 | Vocational and workforce learning

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 034, Vocational and workforce learning. Native state: Skills, task demand, wages, mobility and employer needs. Potential direct or institutional human pathway: Vocational and workforce learning interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Training success without placement or wage gain.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Skill-to-task provenance and placement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Skill, earnings, job quality and employer performance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 034 | Vocational and workforce learning

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 034, Vocational and workforce learning. Native state: Skills, task demand, wages, mobility and employer needs. Potential direct or institutional human pathway: Vocational and workforce learning interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Training success without placement or wage gain.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Skill-to-task provenance and placement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Skill, earnings, job quality and employer performance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 034 | Vocational and workforce learning

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 034, Vocational and workforce learning. Native state: Skills, task demand, wages, mobility and employer needs. Potential direct or institutional human pathway: Vocational and workforce learning interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Training success without placement or wage gain.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Skill-to-task provenance and placement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Skill, earnings, job quality and employer performance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 034 | Vocational and workforce learning

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 034, Vocational and workforce learning. Native state: Skills, task demand, wages, mobility and employer needs. Potential direct or institutional human pathway: Vocational and workforce learning interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Training success without placement or wage gain.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Local enforcement shifts fear, distrust, displacement or recurrence.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Evidence-first response selection + prevention/support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety and trust improve while unnecessary coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 037 | Policing and public safety systems

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 037, Policing and public safety systems. Native state: Threat, context, evidence, community trust, capacity and alternatives. Potential direct or institutional human pathway: Policing and public safety systems interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Local enforcement shifts fear, distrust, displacement or recurrence.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Evidence-first response selection + prevention/support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety and trust improve while unnecessary coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 037 | Policing and public safety systems

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 037, Policing and public safety systems. Native state: Threat, context, evidence, community trust, capacity and alternatives. Potential direct or institutional human pathway: Policing and public safety systems interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Local enforcement shifts fear, distrust, displacement or recurrence.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Evidence-first response selection + prevention/support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety and trust improve while unnecessary coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 037 | Policing and public safety systems

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 037, Policing and public safety systems. Native state: Threat, context, evidence, community trust, capacity and alternatives. Potential direct or institutional human pathway: Policing and public safety systems interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Local enforcement shifts fear, distrust, displacement or recurrence.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Evidence-first response selection + prevention/support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety and trust improve while unnecessary coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 038 | Corrections, rehabilitation and reintegration

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 038, Corrections, rehabilitation and reintegration. Native state: Risk, harm, needs, skills, housing, work and social support. Potential direct or institutional human pathway: Corrections, rehabilitation and reintegration interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Custody may defer burden to reentry, family or community.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Rehabilitation + restitution + housing/work capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety and reintegration improve while recurrence falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 038 | Corrections, rehabilitation and reintegration

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 038, Corrections, rehabilitation and reintegration. Native state: Risk, harm, needs, skills, housing, work and social support. Potential direct or institutional human pathway: Corrections, rehabilitation and reintegration interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Custody may defer burden to reentry, family or community.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Rehabilitation + restitution + housing/work capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety and reintegration improve while recurrence falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 038 | Corrections, rehabilitation and reintegration

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 038, Corrections, rehabilitation and reintegration. Native state: Risk, harm, needs, skills, housing, work and social support. Potential direct or institutional human pathway: Corrections, rehabilitation and reintegration interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Custody may defer burden to reentry, family or community.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

Candidate Atlas goal: Access, accuracy, staff workload and cost improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 040 | Governance and institutional design

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 040, Governance and institutional design. Native state: Authority, incentives, information, accountability, resources and affected populations. Potential direct or institutional human pathway: Governance and institutional design interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Local agency success exports burden to another agency/population.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-boundary outcome ledger + accountability and capacity design can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service quality, legitimacy, cost and resilience improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 040 | Governance and institutional design

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 040, Governance and institutional design. Native state: Authority, incentives, information, accountability, resources and affected populations. Potential direct or institutional human pathway: Governance and institutional design interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Local agency success exports burden to another agency/population.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-boundary outcome ledger + accountability and capacity design can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service quality, legitimacy, cost and resilience improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. ## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 040, Governance and institutional design. Native state: Authority, incentives, information, accountability, resources and affected populations. Potential direct or institutional human pathway: Governance and institutional design interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Local agency success exports burden to another agency/population.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-boundary outcome ledger + accountability and capacity design can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service quality, legitimacy, cost and resilience improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 040 | Governance and institutional design

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 040, Governance and institutional design. Native state: Authority, incentives, information, accountability, resources and affected populations. Potential direct or institutional human pathway: Governance and institutional design interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Local agency success exports burden to another agency/population.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-boundary outcome ledger + accountability and capacity design can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service quality, legitimacy, cost and resilience improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 041 | Beauty and aesthetics

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 041, Beauty and aesthetics. Native state: Biology, preference, culture, identity, safety, cost and perception. Potential direct or institutional human pathway: Beauty and aesthetics interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Aesthetic gain shifts health, money or self-perception burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Personalized aesthetic/safety state architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Desired aesthetics, health, autonomy and affordability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 041 | Beauty and aesthetics

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 041, Beauty and aesthetics. Native state: Biology, preference, culture, identity, safety, cost and perception. Potential direct or institutional human pathway: Beauty and aesthetics interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Aesthetic gain shifts health, money or self-perception burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Personalized aesthetic/safety state architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Desired aesthetics, health, autonomy and affordability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 041 | Beauty and aesthetics

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 041, Beauty and aesthetics. Native state: Biology, preference, culture, identity, safety, cost and perception. Potential direct or institutional human pathway: Beauty and aesthetics interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Aesthetic gain shifts health, money or self-perception burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Personalized aesthetic/safety state architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Desired aesthetics, health, autonomy and affordability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 041 | Beauty and aesthetics

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 041, Beauty and aesthetics. Native state: Biology, preference, culture, identity, safety, cost and perception. Potential direct or institutional human pathway: Beauty and aesthetics interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Aesthetic gain shifts health, money or self-perception burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

# 042 | Fashion and apparel

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 042, Fashion and apparel. Native state: Identity, fit, comfort, durability, labor, inventory and lifecycle. Potential direct or institutional human pathway: Fashion and apparel interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Style success shifts fit, waste or labor burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Adaptive sizing + provenance + circularity architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fit, identity, durability, labor and waste metrics improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 042 | Fashion and apparel

Individual human / person | Schema mismatch

# 044 | Hospitality

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 044, Hospitality. Native state: Guest needs, staff capacity, time, room state, logistics and locality. Potential direct or institutional human pathway: Hospitality interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Guest delight shifts hidden labor or local burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether End-to-end experience and workload orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Guest experience, staff wellbeing and economics improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 044 | Hospitality

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 044, Hospitality. Native state: Guest needs, staff capacity, time, room state, logistics and locality. Potential direct or institutional human pathway: Hospitality interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Guest delight shifts hidden labor or local burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether End-to-end experience and workload orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Guest experience, staff wellbeing and economics improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 044 | Hospitality

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 044, Hospitality. Native state: Guest needs, staff capacity, time, room state, logistics and locality. Potential direct or institutional human pathway: Hospitality interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Guest delight shifts hidden labor or local burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

Candidate Atlas goal: Guest experience, staff wellbeing and economics improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 044 | Hospitality

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 044, Hospitality. Native state: Guest needs, staff capacity, time, room state, logistics and locality. Potential direct or institutional human pathway: Hospitality interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Guest delight shifts hidden labor or local burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether End-to-end experience and workload orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Guest experience, staff wellbeing and economics improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 044 | Hospitality

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 044, Hospitality. Native state: Guest needs, staff capacity, time, room state, logistics and locality. Potential direct or institutional human pathway: Hospitality interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Guest delight shifts hidden labor or local burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether End-to-end experience and workload orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Guest experience, staff wellbeing and economics improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 044 | Hospitality

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 044, Hospitality. Native state: Guest needs, staff capacity, time, room state, logistics and locality. Potential direct or institutional human pathway: Hospitality interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Guest delight shifts hidden labor or local burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 047, Music and entertainment. Native state: Creative contribution, rights, attention, audience value and platform economics. Potential direct or institutional human pathway: Music and entertainment interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Engagement gain shifts creator income or audience wellbeing.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Contribution/provenance + value-distribution architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Creator value and audience experience improve without exploitative load. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 047 | Music and entertainment

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 047, Music and entertainment. Native state: Creative contribution, rights, attention, audience value and platform economics. Potential direct or institutional human pathway: Music and entertainment interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Engagement gain shifts creator income or audience wellbeing.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Contribution/provenance + value-distribution architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Creator value and audience experience improve without exploitative load. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 047 | Music and entertainment

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 047, Music and entertainment. Native state: Creative contribution, rights, attention, audience value and platform economics. Potential direct or institutional human pathway: Music and entertainment interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Engagement gain shifts creator income or audience wellbeing.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Contribution/provenance + value-distribution architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Creator value and audience experience improve without exploitative load. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 047 | Music and entertainment

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 047, Music and entertainment. Native state: Creative contribution, rights, attention, audience value and platform economics. Potential direct or institutional human pathway: Music and entertainment interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Engagement gain shifts creator income or audience wellbeing.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Contribution/provenance + value-distribution architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Creator value and audience experience improve without exploitative load. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 048 | Gaming and virtual worlds

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 048, Gaming and virtual worlds. Native state: Player goals, time, identity, economy, safety and creator contribution. Potential direct or institutional human pathway: Gaming and virtual worlds interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Revenue shifts time, financial or social burden to players.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-reality value and safety controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fun, agency, creator value and safety improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 048 | Gaming and virtual worlds

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 048, Gaming and virtual worlds. Native state: Player goals, time, identity, economy, safety and creator contribution. Potential direct or institutional human pathway: Gaming and virtual worlds interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Revenue shifts time, financial or social burden to players.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-reality value and safety controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fun, agency, creator value and safety improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 048 | Gaming and virtual worlds

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 050, Experience design and events. Native state: Attention, emotion, logistics, accessibility, staff load and community impact. Potential direct or institutional human pathway: Experience design and events interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Experience gains shift queues, labor, exclusion or neighborhood burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether End-to-end experience-state orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Experience, access, worker load and local impact improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 050 | Experience design and events

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 050, Experience design and events. Native state: Attention, emotion, logistics, accessibility, staff load and community impact. Potential direct or institutional human pathway: Experience design and events interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Experience gains shift queues, labor, exclusion or neighborhood burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether End-to-end experience-state orchestration can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Experience, access, worker load and local impact improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 051 | Currency and monetary experience

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 051, Currency and monetary experience. Native state: Purchasing power, liquidity, settlement, access, trust and macro context. Potential direct or institutional human pathway: Currency and monetary experience interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Nominal stability hides distributional or transaction burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential monetary-state and settlement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, settlement, purchasing stability and systemic resilience improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 051 | Currency and monetary experience

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 051, Currency and monetary experience. Native state: Purchasing power, liquidity, settlement, access, trust and macro context. Potential direct or institutional human pathway: Currency and monetary experience interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Nominal stability hides distributional or transaction burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential monetary-state and settlement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, settlement, purchasing stability and systemic resilience improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 051 | Currency and monetary experience

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 051, Currency and monetary experience. Native state: Purchasing power, liquidity, settlement, access, trust and macro context. Potential direct or institutional human pathway: Currency and monetary experience interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Nominal stability hides distributional or transaction burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential monetary-state and settlement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, settlement, purchasing stability and systemic resilience improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 051 | Currency and monetary experience

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 051, Currency and monetary experience. Native state: Purchasing power, liquidity, settlement, access, trust and macro context. Potential direct or institutional human pathway: Currency and monetary experience interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Nominal stability hides distributional or transaction burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential monetary-state and settlement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, settlement, purchasing stability and systemic resilience improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 051 | Currency and monetary experience

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 051, Currency and monetary experience. Native state: Purchasing power, liquidity, settlement, access, trust and macro context. Potential direct or institutional human pathway: Currency and monetary experience interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Nominal stability hides distributional or transaction burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential monetary-state and settlement architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, settlement, purchasing stability and systemic resilience improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 052 | Payments and remittances

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 052, Payments and remittances. Native state: Amount, fees, FX, settlement time, access, fraud and recipient liquidity. Potential direct or institutional human pathway: Payments and remittances interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Speed or compliance shifts cost/friction to sender or receiver.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether End-to-end transfer optimization with transparent provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Cost, speed, safety and recipient value improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 052 | Payments and remittances

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

# 052 | Payments and remittances

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 052, Payments and remittances. Native state: Amount, fees, FX, settlement time, access, fraud and recipient liquidity. Potential direct or institutional human pathway: Payments and remittances interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Speed or compliance shifts cost/friction to sender or receiver.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether End-to-end transfer optimization with transparent provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Cost, speed, safety and recipient value improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 053 | Banking and liquidity

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 053, Banking and liquidity. Native state: Deposits, credit, liquidity, capital, customer state and network exposures. Potential direct or institutional human pathway: Banking and liquidity interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Risk shifts to customer, NBFI, taxpayer or future period.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Network consequential balance sheet + capacity buffers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Liquidity, access, resilience and customer outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 053 | Banking and liquidity

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 053, Banking and liquidity. Native state: Deposits, credit, liquidity, capital, customer state and network exposures. Potential direct or institutional human pathway: Banking and liquidity interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Risk shifts to customer, NBFI, taxpayer or future period.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Network consequential balance sheet + capacity buffers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

Candidate Atlas goal: Liquidity, access, resilience and customer outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 053 | Banking and liquidity

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 053, Banking and liquidity. Native state: Deposits, credit, liquidity, capital, customer state and network exposures. Potential direct or institutional human pathway: Banking and liquidity interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Risk shifts to customer, NBFI, taxpayer or future period.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Network consequential balance sheet + capacity buffers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Liquidity, access, resilience and customer outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 053 | Banking and liquidity

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 053, Banking and liquidity. Native state: Deposits, credit, liquidity, capital, customer state and network exposures. Potential direct or institutional human pathway: Banking and liquidity interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Risk shifts to customer, NBFI, taxpayer or future period.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Network consequential balance sheet + capacity buffers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Liquidity, access, resilience and customer outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 053 | Banking and liquidity

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 053, Banking and liquidity. Native state: Deposits, credit, liquidity, capital, customer state and network exposures. Potential direct or institutional human pathway: Banking and liquidity interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Risk shifts to customer, NBFI, taxpayer or future period.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Network consequential balance sheet + capacity buffers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Liquidity, access, resilience and customer outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 053 | Banking and liquidity

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 053, Banking and liquidity. Native state: Deposits, credit, liquidity, capital, customer state and network exposures. Potential direct or institutional human pathway: Banking and liquidity interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Risk shifts to customer, NBFI, taxpayer or future period.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

Investigate whether Network consequential balance sheet + capacity buffers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Liquidity, access, resilience and customer outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 054 | Credit and underwriting

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 054, Credit and underwriting. Native state: Cashflow, assets, obligations, trajectory, capability and uncertainty. Potential direct or institutional human pathway: Credit and underwriting interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Risk reduction denies productive capacity or shifts cost elsewhere.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Dynamic provenance/capacity underwriting can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Default risk and productive opportunity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 054 | Credit and underwriting

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 054, Credit and underwriting. Native state: Cashflow, assets, obligations, trajectory, capability and uncertainty. Potential direct or institutional human pathway: Credit and underwriting interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Risk reduction denies productive capacity or shifts cost elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Dynamic provenance/capacity underwriting can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Default risk and productive opportunity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 054 | Credit and underwriting

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 054, Credit and underwriting. Native state: Cashflow, assets, obligations, trajectory, capability and uncertainty. Potential direct or institutional human pathway: Credit and underwriting interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Risk reduction denies productive capacity or shifts cost elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Dynamic provenance/capacity underwriting can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Default risk and productive opportunity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 054 | Credit and underwriting

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 054, Credit and underwriting. Native state: Cashflow, assets, obligations, trajectory, capability and uncertainty. Potential direct or institutional human pathway: Credit and underwriting interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Risk reduction denies productive capacity or shifts cost elsewhere.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Dynamic provenance/capacity underwriting can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Default risk and productive opportunity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 054 | Credit and underwriting

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 054, Credit and underwriting. Native state: Cashflow, assets, obligations, trajectory, capability and uncertainty. Potential direct or institutional human pathway: Credit and underwriting interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Risk reduction denies productive capacity or shifts cost elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Dynamic provenance/capacity underwriting can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Default risk and productive opportunity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 054 | Credit and underwriting

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 054, Credit and underwriting. Native state: Cashflow, assets, obligations, trajectory, capability and uncertainty. Potential direct or institutional human pathway: Credit and underwriting interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Risk reduction denies productive capacity or shifts cost elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Dynamic provenance/capacity underwriting can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Default risk and productive opportunity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 055 | Insurance and resilience

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 055, Insurance and resilience. Native state: Hazard, exposure, prevention, coverage, recovery and incentives. Potential direct or institutional human pathway: Insurance and resilience interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Risk transfer leaves hazard untouched or creates moral hazard.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention + resilience + coverage architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Losses, recovery time, affordability and insurer viability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 055 | Insurance and resilience

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 055, Insurance and resilience. Native state: Hazard, exposure, prevention, coverage, recovery and incentives. Potential direct or institutional human pathway: Insurance and resilience interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Risk transfer leaves hazard untouched or creates moral hazard.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

# 056 | Capital markets and investing

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 056, Capital markets and investing. Native state: Price, cashflow, externalities, network risk and long-horizon value. Potential direct or institutional human pathway: Capital markets and investing interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Portfolio gain can externalize future or nonmarket cost.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential asset ledger with carrier constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Risk-adjusted return and protected carrier outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 056 | Capital markets and investing

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 056, Capital markets and investing. Native state: Price, cashflow, externalities, network risk and long-horizon value. Potential direct or institutional human pathway: Capital markets and investing interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Portfolio gain can externalize future or nonmarket cost.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential asset ledger with carrier constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Risk-adjusted return and protected carrier outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 056 | Capital markets and investing

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 056, Capital markets and investing. Native state: Price, cashflow, externalities, network risk and long-horizon value. Potential direct or institutional human pathway: Capital markets and investing interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Portfolio gain can externalize future or nonmarket cost.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential asset ledger with carrier constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Risk-adjusted return and protected carrier outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 057 | Private wealth and family capital

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 057, Private wealth and family capital. Native state: Financial, human, social, health and intergenerational capital. Potential direct or institutional human pathway: Private wealth and family capital interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Return maximization shifts life or family burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-capital balance sheet + goals/capacity controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Wealth, resilience, health and intergenerational outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 057 | Private wealth and family capital

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 057, Private wealth and family capital. Native state: Financial, human, social, health and intergenerational capital. Potential direct or institutional human pathway: Private wealth and family capital interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Return maximization shifts life or family burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-capital balance sheet + goals/capacity controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Wealth, resilience, health and intergenerational outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 057 | Private wealth and family capital

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 057, Private wealth and family capital. Native state: Financial, human, social, health and intergenerational capital. Potential direct or institutional human pathway: Private wealth and family capital interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Return maximization shifts life or family burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-capital balance sheet + goals/capacity controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Wealth, resilience, health and intergenerational outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 057 | Private wealth and family capital

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 057, Private wealth and family capital. Native state: Financial, human, social, health and intergenerational capital. Potential direct or institutional human pathway: Private wealth and family capital interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Return maximization shifts life or family burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-capital balance sheet + goals/capacity controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Wealth, resilience, health and intergenerational outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 057 | Private wealth and family capital

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 057, Private wealth and family capital. Native state: Financial, human, social, health and intergenerational capital. Potential direct or institutional human pathway: Private wealth and family capital interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Return maximization shifts life or family burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-capital balance sheet + goals/capacity controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Wealth, resilience, health and intergenerational outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 057 | Private wealth and family capital

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 057, Private wealth and family capital. Native state: Financial, human, social, health and intergenerational capital. Potential direct or institutional human pathway: Private wealth and family capital interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Return maximization shifts life or family burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-capital balance sheet + goals/capacity controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Wealth, resilience, health and intergenerational outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 058 | Labor and talent markets

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 058, Labor and talent markets. Native state: Capability, workload, pay, health, learning and opportunity. Potential direct or institutional human pathway: Labor and talent markets interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Employer output shifts invisible effort or underutilizes capability.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Capability-state + workload + mobility architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Productivity, pay, health and retention improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 058 | Labor and talent markets

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 058, Labor and talent markets. Native state: Capability, workload, pay, health, learning and opportunity. Potential direct or institutional human pathway: Labor and talent markets interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Employer output shifts invisible effort or underutilizes capability.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Capability-state + workload + mobility architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Productivity, pay, health and retention improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 058 | Labor and talent markets

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 058, Labor and talent markets. Native state: Capability, workload, pay, health, learning and opportunity. Potential direct or institutional human pathway: Labor and talent markets interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Employer output shifts invisible effort or underutilizes capability.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Productivity, pay, health and retention improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 059 | Organizations and enterprises

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 059, Organizations and enterprises. Native state: Functions, dependencies, people, cash, knowledge and customer value. Potential direct or institutional human pathway: Organizations and enterprises interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Department success moves burden to another team/customer.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Enterprise consequential graph + capacity placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Customer, worker, financial and resilience outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 059 | Organizations and enterprises

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 059, Organizations and enterprises. Native state: Functions, dependencies, people, cash, knowledge and customer value. Potential direct or institutional human pathway: Organizations and enterprises interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Department success moves burden to another team/customer.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Enterprise consequential graph + capacity placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Customer, worker, financial and resilience outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. # 059 | Organizations and enterprises

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 059, Organizations and enterprises. Native state: Functions, dependencies, people, cash, knowledge and customer value. Potential direct or institutional human pathway: Organizations and enterprises interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Department success moves burden to another team/customer.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Enterprise consequential graph + capacity placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Customer, worker, financial and resilience outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 060 | Entrepreneurship and venture creation

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 060, Entrepreneurship and venture creation. Native state: Unmet burden, carrier, willingness to pay, build cost and adoption. Potential direct or institutional human pathway: Entrepreneurship and venture creation interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: No category exists because burden is hidden or dispersed.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Mutual-Uptick blocker discovery + missing-capacity build can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Customer and surrounding carriers gain while venture captures part of released value. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 060 | Entrepreneurship and venture creation

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 060, Entrepreneurship and venture creation. Native state: Unmet burden, carrier, willingness to pay, build cost and adoption. Potential direct or institutional human pathway: Entrepreneurship and venture creation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: No category exists because burden is hidden or dispersed.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Mutual-Uptick blocker discovery + missing-capacity build can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Customer and surrounding carriers gain while venture captures part of released value. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 060 | Entrepreneurship and venture creation

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 060, Entrepreneurship and venture creation. Native state: Unmet burden, carrier, willingness to pay, build cost and adoption. Potential direct or institutional human pathway: Entrepreneurship and venture creation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: No category exists because burden is hidden or dispersed.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Mutual-Uptick blocker discovery + missing-capacity build can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Customer and surrounding carriers gain while venture captures part of released value. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 060 | Entrepreneurship and venture creation

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 060, Entrepreneurship and venture creation. Native state: Unmet burden, carrier, willingness to pay, build cost and adoption. Potential direct or institutional human pathway: Entrepreneurship and venture creation interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: No category exists because burden is hidden or dispersed.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Mutual-Uptick blocker discovery + missing-capacity build can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Customer and surrounding carriers gain while venture captures part of released value. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 060 | Entrepreneurship and venture creation

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 060, Entrepreneurship and venture creation. Native state: Unmet burden, carrier, willingness to pay, build cost and adoption. Potential direct or institutional human pathway: Entrepreneurship and venture creation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: No category exists because burden is hidden or dispersed.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Mutual-Uptick blocker discovery + missing-capacity build can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Customer and surrounding carriers gain while venture captures part of released value. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 060 | Entrepreneurship and venture creation

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 060, Entrepreneurship and venture creation. Native state: Unmet burden, carrier, willingness to pay, build cost and adoption. Potential direct or institutional human pathway: Entrepreneurship and venture creation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: No category exists because burden is hidden or dispersed.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Mutual-Uptick blocker discovery + missing-capacity build can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Customer and surrounding carriers gain while venture captures part of released value. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 061 | Artificial intelligence

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 061, Artificial intelligence. Native state: Model state, source reality, user intent, provenance, uncertainty and downstream action. Potential direct or institutional human pathway: Artificial intelligence interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Model utility shifts verification and error burden to humans.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Persistent schema/provenance layer + self-audit and escalation can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Utility, correctness, verification load and resource efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 061 | Artificial intelligence

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 061, Artificial intelligence. Native state: Model state, source reality, user intent, provenance, uncertainty and downstream action. Potential direct or institutional human pathway: Artificial intelligence interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Model utility shifts verification and error burden to humans.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Persistent schema/provenance layer + self-audit and escalation can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Utility, correctness, verification load and resource efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 061 | Artificial intelligence

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 061, Artificial intelligence. Native state: Model state, source reality, user intent, provenance, uncertainty and downstream action. Potential direct or institutional human pathway: Artificial intelligence interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Model utility shifts verification and error burden to humans.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Persistent schema/provenance layer + self-audit and escalation can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Utility, correctness, verification load and resource efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 061 | Artificial intelligence

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 061, Artificial intelligence. Native state: Model state, source reality, user intent, provenance, uncertainty and downstream action. Potential direct or institutional human pathway: Artificial intelligence interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Model utility shifts verification and error burden to humans.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Investigate whether Self-updating attack schema + carrier prediction + safe containment/failover can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Loss, compromise, analyst load and downtime all fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 064 | Data infrastructure

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 064, Data infrastructure. Native state: Datasets, lineage, semantics, permissions, quality and downstream uses. Potential direct or institutional human pathway: Data infrastructure interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Cleaning one layer shifts ambiguity downstream.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance graph + semantic reconciliation layer can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Quality, reuse, privacy and maintenance burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 064 | Data infrastructure

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 064, Data infrastructure. Native state: Datasets, lineage, semantics, permissions, quality and downstream uses. Potential direct or institutional human pathway: Data infrastructure interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Cleaning one layer shifts ambiguity downstream.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance graph + semantic reconciliation layer can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Quality, reuse, privacy and maintenance burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 064 | Data infrastructure

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 064, Data infrastructure. Native state: Datasets, lineage, semantics, permissions, quality and downstream uses. Potential direct or institutional human pathway: Data infrastructure interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Cleaning one layer shifts ambiguity downstream.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance graph + semantic reconciliation layer can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Quality, reuse, privacy and maintenance burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 064 | Data infrastructure

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 064, Data infrastructure. Native state: Datasets, lineage, semantics, permissions, quality and downstream uses. Potential direct or institutional human pathway: Data infrastructure interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Cleaning one layer shifts ambiguity downstream.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance graph + semantic reconciliation layer can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Quality, reuse, privacy and maintenance burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 064 | Data infrastructure

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 064, Data infrastructure. Native state: Datasets, lineage, semantics, permissions, quality and downstream uses. Potential direct or institutional human pathway: Data infrastructure interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Cleaning one layer shifts ambiguity downstream.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance graph + semantic reconciliation layer can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Quality, reuse, privacy and maintenance burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 064 | Data infrastructure

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 064, Data infrastructure. Native state: Datasets, lineage, semantics, permissions, quality and downstream uses. Potential direct or institutional human pathway: Data infrastructure interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Cleaning one layer shifts ambiguity downstream.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance graph + semantic reconciliation layer can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Quality, reuse, privacy and maintenance burden improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 065 | Privacy

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 065, Privacy. Native state: Data state, purposes, consent, exposure, value and future misuse. Potential direct or institutional human pathway: Privacy interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Utility shifts surveillance/risk burden to individuals.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Selective disclosure + provenance + minimization architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Utility and organizational value improve while exposure falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 065 | Privacy

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 065, Privacy. Native state: Data state, purposes, consent, exposure, value and future misuse. Potential direct or institutional human pathway: Privacy interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Utility shifts surveillance/risk burden to individuals.

Adapter 067, Internet and communications. Native state: Topology, capacity, latency, content, trust and user needs. Potential direct or institutional human pathway: Internet and communications interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Speed shifts attention, misinformation or energy burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential routing + fidelity/provenance layers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Performance, reliability, trust and energy efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 067 | Internet and communications

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 067, Internet and communications. Native state: Topology, capacity, latency, content, trust and user needs. Potential direct or institutional human pathway: Internet and communications interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Speed shifts attention, misinformation or energy burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential routing + fidelity/provenance layers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Performance, reliability, trust and energy efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 067 | Internet and communications

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 067, Internet and communications. Native state: Topology, capacity, latency, content, trust and user needs. Potential direct or institutional human pathway: Internet and communications interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Speed shifts attention, misinformation or energy burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential routing + fidelity/provenance layers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Performance, reliability, trust and energy efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 067 | Internet and communications

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 067, Internet and communications. Native state: Topology, capacity, latency, content, trust and user needs. Potential direct or institutional human pathway: Internet and communications interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Speed shifts attention, misinformation or energy burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential routing + fidelity/provenance layers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Performance, reliability, trust and energy efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 068 | Media and information ecosystems

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 068, Media and information ecosystems. Native state: Claims, evidence, incentives, attention, creators and audiences. Potential direct or institutional human pathway: Media and information ecosystems interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Attention gain shifts cognition or information quality burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Claim provenance + quality + incentive reconciliation can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Reach, creator value and information quality improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 068 | Media and information ecosystems

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 068, Media and information ecosystems. Native state: Claims, evidence, incentives, attention, creators and audiences. Potential direct or institutional human pathway: Media and information ecosystems interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Attention gain shifts cognition or information quality burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Claim provenance + quality + incentive reconciliation can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Reach, creator value and information quality improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 068 | Media and information ecosystems

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 068, Media and information ecosystems. Native state: Claims, evidence, incentives, attention, creators and audiences. # 070 | Knowledge and ontologies

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 070, Knowledge and ontologies. Native state: Entities, relations, provenance, incompatible schemas and uncertainty. Potential direct or institutional human pathway: Knowledge and ontologies interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Integration collapses distinctions or explodes complexity.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-schema translation + minimal sufficient ontology can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Interoperability and fidelity rise while complexity stays controlled. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 070 | Knowledge and ontologies

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 070, Knowledge and ontologies. Native state: Entities, relations, provenance, incompatible schemas and uncertainty. Potential direct or institutional human pathway: Knowledge and ontologies interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Integration collapses distinctions or explodes complexity.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-schema translation + minimal sufficient ontology can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Interoperability and fidelity rise while complexity stays controlled. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 071 | Energy and power grids

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 071, Energy and power grids. Native state: Generation, load, storage, network constraints, prices and reliability. A human may be a researcher, operator, regulated party or downstream recipient of this Energy and power grids system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Efficiency moves load, congestion or rebound elsewhere.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential grid controller + capacity placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Reliability, affordability, emissions and congestion improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 071 | Energy and power grids

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 071, Energy and power grids. Native state: Generation, load, storage, network constraints, prices and reliability. A human may be a researcher, operator, regulated party or downstream recipient of this Energy and power grids system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Efficiency moves load, congestion or rebound elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential grid controller + capacity placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Reliability, affordability, emissions and congestion improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 071 | Energy and power grids

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 071, Energy and power grids. Native state: Generation, load, storage, network constraints, prices and reliability. A human may be a researcher, operator, regulated party or downstream recipient of this Energy and power grids system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Efficiency moves load, congestion or rebound elsewhere.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential grid controller + capacity placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Reliability, affordability, emissions and congestion improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 071 | Energy and power grids

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 071, Energy and power grids. Native state: Generation, load, storage, network constraints, prices and reliability. A human may be a researcher, operator, regulated party or downstream recipient of this Energy and power grids system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Efficiency moves load, congestion or rebound elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

If unmet, record the limiting constraint and next ethically admissible construction search.

# 072 | Water and irrigation

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 072, Water and irrigation. Native state: Withdrawals, consumptive use, return flows, storage, aquifers and ecology. A human may be a researcher, operator, regulated party or downstream recipient of this Water and irrigation system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Local savings reduce return flow or increase consumption.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Basin-wide accounting + catchment + allocation capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Farm value and basin availability/ecology improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 072 | Water and irrigation

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Yield/income, soil, water and nutrition improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 074 | Supply chains and logistics

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 074, Supply chains and logistics. Native state: Inventory, demand, transport, suppliers, lead times and risk. A human may be a researcher, operator, regulated party or downstream recipient of this Supply chains and logistics system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Lean optimization moves inventory/risk downstream.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Carrier-aware flow controller + buffer placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service, working capital, resilience and labor improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 074 | Supply chains and logistics

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 074, Supply chains and logistics. Native state: Inventory, demand, transport, suppliers, lead times and risk. A human may be a researcher, operator, regulated party or downstream recipient of this Supply chains and logistics system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Lean optimization moves inventory/risk downstream.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Carrier-aware flow controller + buffer placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service, working capital, resilience and labor improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 074 | Supply chains and logistics

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 074, Supply chains and logistics. Native state: Inventory, demand, transport, suppliers, lead times and risk. A human may be a researcher, operator, regulated party or downstream recipient of this Supply chains and logistics system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Lean optimization moves inventory/risk downstream.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Carrier-aware flow controller + buffer placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service, working capital, resilience and labor improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 074 | Supply chains and logistics

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 074, Supply chains and logistics. Native state: Inventory, demand, transport, suppliers, lead times and risk. A human may be a researcher, operator, regulated party or downstream recipient of this Supply chains and logistics system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Lean optimization moves inventory/risk downstream.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Carrier-aware flow controller + buffer placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service, working capital, resilience and labor improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 074 | Supply chains and logistics

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 074, Supply chains and logistics. Native state: Inventory, demand, transport, suppliers, lead times and risk. A human may be a researcher, operator, regulated party or downstream recipient of this Supply chains and logistics system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Lean optimization moves inventory/risk downstream.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Carrier-aware flow controller + buffer placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service, working capital, resilience and labor improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 074 | Supply chains and logistics

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 074, Supply chains and logistics. Native state: Inventory, demand, transport, suppliers, lead times and risk. A human may be a researcher, operator, regulated party or downstream recipient of this Supply chains and logistics system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Lean optimization moves inventory/risk downstream.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Carrier-aware flow controller + buffer placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Service, working capital, resilience and labor improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 075 | Manufacturing

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 075, Manufacturing. Native state: Materials, energy, machines, labor, quality, maintenance and waste. A human may be a researcher, operator, regulated party or downstream recipient of this Manufacturing system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Cost gain shifts maintenance, injuries or waste.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Closed-loop production and maintenance architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Cost, quality, safety, uptime and waste improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 075 | Manufacturing

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

# 076 | Waste and circular materials

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 076, Waste and circular materials. Native state: Material composition, location, contamination, residual value and logistics. A human may be a researcher, operator, regulated party or downstream recipient of this Waste and circular materials system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Disposal removes item from local ledger but not system.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Material provenance + recapture + transformation capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Waste, cost and virgin input demand fall while value recovery rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 077 | Transportation and mobility

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 077, Transportation and mobility. Native state: Trips, time, safety, access, energy, congestion and land use. A human may be a researcher, operator, regulated party or downstream recipient of this Transportation and mobility system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Faster local travel creates congestion, emissions or exclusion.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Multimodal consequential mobility controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, time, safety, energy and neighborhood outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 077 | Transportation and mobility

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 077, Transportation and mobility. Native state: Trips, time, safety, access, energy, congestion and land use. A human may be a researcher, operator, regulated party or downstream recipient of this Transportation and mobility system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Faster local travel creates congestion, emissions or exclusion.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multimodal consequential mobility controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, time, safety, energy and neighborhood outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 077 | Transportation and mobility

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 077, Transportation and mobility. Native state: Trips, time, safety, access, energy, congestion and land use. A human may be a researcher, operator, regulated party or downstream recipient of this Transportation and mobility system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Faster local travel creates congestion, emissions or exclusion.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Multimodal consequential mobility controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, time, safety, energy and neighborhood outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 077 | Transportation and mobility

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 077, Transportation and mobility. Native state: Trips, time, safety, access, energy, congestion and land use. A human may be a researcher, operator, regulated party or downstream recipient of this Transportation and mobility system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Faster local travel creates congestion, emissions or exclusion.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Multimodal consequential mobility controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, time, safety, energy and neighborhood outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 077 | Transportation and mobility

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 077, Transportation and mobility. Native state: Trips, time, safety, access, energy, congestion and land use. A human may be a researcher, operator, regulated party or downstream recipient of this Transportation and mobility system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Faster local travel creates congestion, emissions or exclusion.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multimodal consequential mobility controller can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, time, safety, energy and neighborhood outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 078 | Cities and urban systems

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 078, Cities and urban systems. Native state: Housing, jobs, transport, health, utilities, safety and public space. A human may be a researcher, operator, regulated party or downstream recipient of this Cities and urban systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: One department shifts burden to another neighborhood/system.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether City consequential digital twin + coordinated capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, health, resilience, affordability and service improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 078 | Cities and urban systems

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 078, Cities and urban systems. Native state: Housing, jobs, transport, health, utilities, safety and public space. A human may be a researcher, operator, regulated party or downstream recipient of this Cities and urban systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: One department shifts burden to another neighborhood/system.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether City consequential digital twin + coordinated capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, health, resilience, affordability and service improve. Investigate whether Landscape-scale leakage/carrier accounting + livelihoods can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Biodiversity and community outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 080 | Ecology and biodiversity

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 080, Ecology and biodiversity. Native state: Species, habitats, flows, extraction, communities and climate. A human may be a researcher, operator, regulated party or downstream recipient of this Ecology and biodiversity system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Protection displaces extraction or pressure elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Landscape-scale leakage/carrier accounting + livelihoods can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Biodiversity and community outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 080 | Ecology and biodiversity

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 080, Ecology and biodiversity. Native state: Species, habitats, flows, extraction, communities and climate. A human may be a researcher, operator, regulated party or downstream recipient of this Ecology and biodiversity system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Protection displaces extraction or pressure elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Landscape-scale leakage/carrier accounting + livelihoods can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Biodiversity and community outcomes improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 081 | Cell biology

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 081, Cell biology. Native state: Signaling, organelles, metabolism, damage, repair and cell-state transitions. A human may be a researcher, operator, regulated party or downstream recipient of this Cell biology system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Pathway correction displaces stress to another process.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-state cellular controller + capacity targeting can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Target function improves without compensatory cellular damage. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 081 | Cell biology

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 081, Cell biology. Native state: Signaling, organelles, metabolism, damage, repair and cell-state transitions. A human may be a researcher, operator, regulated party or downstream recipient of this Cell biology system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Pathway correction displaces stress to another process.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-state cellular controller + capacity targeting can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Target function improves without compensatory cellular damage. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 081 | Cell biology

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 081, Cell biology. Native state: Signaling, organelles, metabolism, damage, repair and cell-state transitions. A human may be a researcher, operator, regulated party or downstream recipient of this Cell biology system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Pathway correction displaces stress to another process.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

# 084 | Chemistry and reaction systems

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 084, Chemistry and reaction systems. Native state: Species, reaction network, kinetics, energy, byproducts and separation. A human may be a researcher, operator, regulated party or downstream recipient of this Chemistry and reaction systems system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Yield gain shifts energy/byproduct/separation burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential reaction-network optimization + recovery loops can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Yield, energy, waste and safety improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 084 | Chemistry and reaction systems

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 084, Chemistry and reaction systems. Native state: Species, reaction network, kinetics, energy, byproducts and separation. A human may be a researcher, operator, regulated party or downstream recipient of this Chemistry and reaction systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Yield gain shifts energy/byproduct/separation burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential reaction-network optimization + recovery loops can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Yield, energy, waste and safety improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 084 | Chemistry and reaction systems

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 084, Chemistry and reaction systems. Native state: Species, reaction network, kinetics, energy, byproducts and separation. A human may be a researcher, operator, regulated party or downstream recipient of this Chemistry and reaction systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Yield gain shifts energy/byproduct/separation burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential reaction-network optimization + recovery loops can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Yield, energy, waste and safety improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 084 | Chemistry and reaction systems

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 084, Chemistry and reaction systems. Native state: Species, reaction network, kinetics, energy, byproducts and separation. A human may be a researcher, operator, regulated party or downstream recipient of this Chemistry and reaction systems system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Yield gain shifts energy/byproduct/separation burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential reaction-network optimization + recovery loops can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Yield, energy, waste and safety improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 084 | Chemistry and reaction systems

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 084, Chemistry and reaction systems. Native state: Species, reaction network, kinetics, energy, byproducts and separation. A human may be a researcher, operator, regulated party or downstream recipient of this Chemistry and reaction systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Yield gain shifts energy/byproduct/separation burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential reaction-network optimization + recovery loops can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Yield, energy, waste and safety improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 084 | Chemistry and reaction systems

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 084, Chemistry and reaction systems. Native state: Species, reaction network, kinetics, energy, byproducts and separation. A human may be a researcher, operator, regulated party or downstream recipient of this Chemistry and reaction systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Yield gain shifts energy/byproduct/separation burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Consequential reaction-network optimization + recovery loops can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Yield, energy, waste and safety improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 085 | Materials science

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 085, Materials science. Native state: Microstructure, defects, stress, temperature, lifecycle and manufacturing. A human may be a researcher, operator, regulated party or downstream recipient of this Materials science system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Strength gain shifts brittleness, weight or recyclability.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Defect-aware multiproperty design + recovery architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Performance, durability, mass, cost and recyclability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 085 | Materials science

# 086 | Classical mechanics and control

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 086, Classical mechanics and control. Native state: Physical state, dynamics, sensors, actuators and disturbance. A human may be a researcher, operator, regulated party or downstream recipient of this Classical mechanics and control system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Control success shifts energy, heat or another state variable.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Representation-aware full-state controller + regenerative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Tracking, stability, energy and wear improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 086 | Classical mechanics and control

Individual human / person | Schema mismatch

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Representation-aware full-state controller + regenerative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Tracking, stability, energy and wear improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 086 | Classical mechanics and control

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 086, Classical mechanics and control. Native state: Physical state, dynamics, sensors, actuators and disturbance. A human may be a researcher, operator, regulated party or downstream recipient of this Classical mechanics and control system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Control success shifts energy, heat or another state variable.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Representation-aware full-state controller + regenerative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Tracking, stability, energy and wear improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 087 | Thermodynamics and nonequilibrium systems

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 087, Thermodynamics and nonequilibrium systems. Native state: Energy, entropy, gradients, reservoirs, flows and constraints. A human may be a researcher, operator, regulated party or downstream recipient of this Thermodynamics and nonequilibrium systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Local efficiency moves entropy production/heat elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-boundary energy/exergy and recovery architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Useful work rises while irreversible losses and collateral loads fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 087 | Thermodynamics and nonequilibrium systems

Individual human / person | Schema mismatch

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-boundary energy/exergy and recovery architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Useful work rises while irreversible losses and collateral loads fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 087 | Thermodynamics and nonequilibrium systems

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 087, Thermodynamics and nonequilibrium systems. Native state: Energy, entropy, gradients, reservoirs, flows and constraints. A human may be a researcher, operator, regulated party or downstream recipient of this Thermodynamics and nonequilibrium systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Local efficiency moves entropy production/heat elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-boundary energy/exergy and recovery architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Useful work rises while irreversible losses and collateral loads fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 087 | Thermodynamics and nonequilibrium systems

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 087, Thermodynamics and nonequilibrium systems. Native state: Energy, entropy, gradients, reservoirs, flows and constraints. A human may be a researcher, operator, regulated party or downstream recipient of this Thermodynamics and nonequilibrium systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Local efficiency moves entropy production/heat elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-boundary energy/exergy and recovery architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Useful work rises while irreversible losses and collateral loads fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 087 | Thermodynamics and nonequilibrium systems

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 087, Thermodynamics and nonequilibrium systems. Native state: Energy, entropy, gradients, reservoirs, flows and constraints. A human may be a researcher, operator, regulated party or downstream recipient of this Thermodynamics and nonequilibrium systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Local efficiency moves entropy production/heat elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-boundary energy/exergy and recovery architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Useful work rises while irreversible losses and collateral loads fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 087 | Thermodynamics and nonequilibrium systems

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 087, Thermodynamics and nonequilibrium systems. Native state: Energy, entropy, gradients, reservoirs, flows and constraints. A human may be a researcher, operator, regulated party or downstream recipient of this Thermodynamics and nonequilibrium systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Local efficiency moves entropy production/heat elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-boundary energy/exergy and recovery architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Useful work rises while irreversible losses and collateral loads fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 088 | Electromagnetism and circuits

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 088, Electromagnetism and circuits. Native state: Fields, voltages, currents, topology, storage and losses. A human may be a researcher, operator, regulated party or downstream recipient of this Electromagnetism and circuits system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Local regulation moves loss or instability to another branch.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Full-network state estimation + capacity/recovery placement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Stability, efficiency, reliability and component stress improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 088 | Electromagnetism and circuits

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 088, Electromagnetism and circuits. Native state: Fields, voltages, currents, topology, storage and losses. A human may be a researcher, operator, regulated party or downstream recipient of this Electromagnetism and circuits system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Local regulation moves loss or instability to another branch.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

A human may be a researcher, operator, regulated party or downstream recipient of this Pure mathematics and formal systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Representation collapses distinctions or expands proof complexity.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Minimal sufficient schema preserving required relations can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while ambiguity and proof/representation cost fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 090 | Pure mathematics and formal systems

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 090, Pure mathematics and formal systems. Native state: Objects, relations, axioms, language, proofs and translations. A human may be a researcher, operator, regulated party or downstream recipient of this Pure mathematics and formal systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Representation collapses distinctions or expands proof complexity.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Minimal sufficient schema preserving required relations can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while ambiguity and proof/representation cost fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 090 | Pure mathematics and formal systems

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 090, Pure mathematics and formal systems. Native state: Objects, relations, axioms, language, proofs and translations. A human may be a researcher, operator, regulated party or downstream recipient of this Pure mathematics and formal systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Representation collapses distinctions or expands proof complexity.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Minimal sufficient schema preserving required relations can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while ambiguity and proof/representation cost fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 091 | Statistics and causal inference

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 091, Statistics and causal inference. Native state: Data-generating process, sampling, measurement, confounding and uncertainty. A human may be a researcher, operator, regulated party or downstream recipient of this Statistics and causal inference system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Local fit hides transportability or selection bias.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance-aware multi-model causal state + identifiability guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive/causal validity improves without hidden subgroup harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 091 | Statistics and causal inference

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 091, Statistics and causal inference. Native state: Data-generating process, sampling, measurement, confounding and uncertainty. A human may be a researcher, operator, regulated party or downstream recipient of this Statistics and causal inference system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Local fit hides transportability or selection bias.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance-aware multi-model causal state + identifiability guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive/causal validity improves without hidden subgroup harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 091 | Statistics and causal inference

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 091, Statistics and causal inference. Native state: Data-generating process, sampling, measurement, confounding and uncertainty. A human may be a researcher, operator, regulated party or downstream recipient of this Statistics and causal inference system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Local fit hides transportability or selection bias.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

# 092 | Logic and reasoning systems

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 092, Logic and reasoning systems. Native state: Premises, inference rules, contradictions, uncertainty and goals. A human may be a researcher, operator, regulated party or downstream recipient of this Logic and reasoning systems system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Consistency in one calculus loses expressivity/context elsewhere.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-logic translation + contradiction provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Validity, expressivity and computational tractability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 092 | Logic and reasoning systems

Individual human / person | Schema mismatch

# 093 | Geography and territorial systems

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 093, Geography and territorial systems. Native state: People, ecosystems, infrastructure, flows and administrative boundaries. A human may be a researcher, operator, regulated party or downstream recipient of this Geography and territorial systems system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Administrative optimization ignores cross-border flows.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Flow-based territorial state model can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, resilience and cross-boundary fairness improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 094 | Informal economy

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 094 | Informal economy

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 094 | Informal economy

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 094 | Informal economy

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 094 | Informal economy

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 094 | Informal economy

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 095 | Illicit and black markets

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 095 | Illicit and black markets

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 095 | Illicit and black markets

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 095 | Illicit and black markets

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 095 | Illicit and black markets

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 096 | Orbital and space economy

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 096, Orbital and space economy. Native state: Spacecraft, debris, spectrum, energy, logistics and operator incentives. A human may be a researcher, operator, regulated party or downstream recipient of this Orbital and space economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Mission gain shifts debris/collision/spectrum burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Orbital consequential ledger + shared capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Mission value, safety, debris and resource efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 096 | Orbital and space economy

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 096, Orbital and space economy. Native state: Spacecraft, debris, spectrum, energy, logistics and operator incentives. A human may be a researcher, operator, regulated party or downstream recipient of this Orbital and space economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Mission gain shifts debris/collision/spectrum burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Orbital consequential ledger + shared capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Mission value, safety, debris and resource efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 096 | Orbital and space economy

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 096, Orbital and space economy. Native state: Spacecraft, debris, spectrum, energy, logistics and operator incentives. A human may be a researcher, operator, regulated party or downstream recipient of this Orbital and space economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Mission gain shifts debris/collision/spectrum burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Orbital consequential ledger + shared capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Mission value, safety, debris and resource efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 096 | Orbital and space economy

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 096, Orbital and space economy. Native state: Spacecraft, debris, spectrum, energy, logistics and operator incentives. A human may be a researcher, operator, regulated party or downstream recipient of this Orbital and space economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Mission gain shifts debris/collision/spectrum burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Orbital consequential ledger + shared capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Mission value, safety, debris and resource efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 096 | Orbital and space economy

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 096, Orbital and space economy. Native state: Spacecraft, debris, spectrum, energy, logistics and operator incentives. A human may be a researcher, operator, regulated party or downstream recipient of this Orbital and space economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Mission gain shifts debris/collision/spectrum burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Orbital consequential ledger + shared capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Mission value, safety, debris and resource efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 096 | Orbital and space economy

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 096, Orbital and space economy. Native state: Spacecraft, debris, spectrum, energy, logistics and operator incentives. A human may be a researcher, operator, regulated party or downstream recipient of this Orbital and space economy system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Mission gain shifts debris/collision/spectrum burden.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Orbital consequential ledger + shared capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Mission value, safety, debris and resource efficiency improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 097 | Extraterrestrial settlement

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 097, Extraterrestrial settlement. Native state: Life support, energy, materials, health, governance and closed ecology. A human may be a researcher, operator, regulated party or downstream recipient of this Extraterrestrial settlement system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Local subsystem success threatens another life-support loop.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Closed-loop consequential state + autonomous capacity construction can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Survival, health, resource closure and social stability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 097 | Extraterrestrial settlement

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 097, Extraterrestrial settlement. Native state: Life support, energy, materials, health, governance and closed ecology. A human may be a researcher, operator, regulated party or downstream recipient of this Extraterrestrial settlement system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Local subsystem success threatens another life-support loop.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Closed-loop consequential state + autonomous capacity construction can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Survival, health, resource closure and social stability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 097 | Extraterrestrial settlement

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 097, Extraterrestrial settlement. Native state: Life support, energy, materials, health, governance and closed ecology. A human may be a researcher, operator, regulated party or downstream recipient of this Extraterrestrial settlement system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Local subsystem success threatens another life-support loop.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Closed-loop consequential state + autonomous capacity construction can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Survival, health, resource closure and social stability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 097 | Extraterrestrial settlement

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 097, Extraterrestrial settlement. Native state: Life support, energy, materials, health, governance and closed ecology. A human may be a researcher, operator, regulated party or downstream recipient of this Extraterrestrial settlement system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Local subsystem success threatens another life-support loop.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

Candidate Atlas goal: Survival, health, resource closure and social stability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 098 | Astrobiology and biosignatures

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 098, Astrobiology and biosignatures. Native state: Unknown life chemistries, environments, signals and contamination risks. A human may be a researcher, operator, regulated party or downstream recipient of this Astrobiology and biosignatures system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Narrow schema misses unfamiliar life or creates false positives.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Plural biosignature schema + provenance/contamination control can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Detection sensitivity and specificity improve without contamination. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 098 | Astrobiology and biosignatures

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

# 100 | Unknown and not-yet-named realities

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 100, Unknown and not-yet-named realities. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode. A human may be a researcher, operator, regulated party or downstream recipient of this Unknown and not-yet-named realities system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Unrepresented state is invisible until consequences accumulate.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Instantiate M_d, define schema, measure gap, trace carrier, construct capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: All material carriers in the new domain cross positive consequential thresholds. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 100, Unknown and not-yet-named realities. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode. A human may be a researcher, operator, regulated party or downstream recipient of this Unknown and not-yet-named realities system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Unrepresented state is invisible until consequences accumulate.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Instantiate M_d, define schema, measure gap, trace carrier, construct capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: All material carriers in the new domain cross positive consequential thresholds. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 100 | Unknown and not-yet-named realities

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 100, Unknown and not-yet-named realities. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode. A human may be a researcher, operator, regulated party or downstream recipient of this Unknown and not-yet-named realities system; a direct human causal effect must not be presumed.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Unrepresented state is invisible until consequences accumulate.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Instantiate M_d, define schema, measure gap, trace carrier, construct capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: All material carriers in the new domain cross positive consequential thresholds. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 100 | Unknown and not-yet-named realities

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 100, Unknown and not-yet-named realities. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode. A human may be a researcher, operator, regulated party or downstream recipient of this Unknown and not-yet-named realities system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Unrepresented state is invisible until consequences accumulate.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Instantiate M_d, define schema, measure gap, trace carrier, construct capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: All material carriers in the new domain cross positive consequential thresholds. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 100 | Unknown and not-yet-named realities

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 100, Unknown and not-yet-named realities. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode. A human may be a researcher, operator, regulated party or downstream recipient of this Unknown and not-yet-named realities system; a direct human causal effect must not be presumed.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Unrepresented state is invisible until consequences accumulate.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Instantiate M_d, define schema, measure gap, trace carrier, construct capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: All material carriers in the new domain cross positive consequential thresholds. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 101 | Conscious experience and self-model

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 101, Conscious experience and self-model. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Potential direct or institutional human pathway: Conscious experience and self-model interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Native conscious state is misread because only externally legible signals are counted.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-modal state representation with provenance, uncertainty and non-erasure constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 101 | Conscious experience and self-model

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 101, Conscious experience and self-model. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Potential direct or institutional human pathway: Conscious experience and self-model interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Native conscious state is misread because only externally legible signals are counted.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

# 102 | Choice and option topology

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 102, Choice and option topology. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Potential direct or institutional human pathway: Choice and option topology interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Feasible-option map plus prebuilt low-friction lawful/prosocial pathways can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agency expands while downstream harm and coercive friction fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 102 | Choice and option topology

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Feasible-option map plus prebuilt low-friction lawful/prosocial pathways can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agency expands while downstream harm and coercive friction fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 103 | Truth, deception and disclosure

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 103 | Truth, deception and disclosure

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 103 | Truth, deception and disclosure

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 103 | Truth, deception and disclosure

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 103 | Truth, deception and disclosure

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 104 | Responsibility and causal attribution

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 104 | Responsibility and causal attribution

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 104 | Responsibility and causal attribution

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 104 | Responsibility and causal attribution

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. If unmet, record the limiting constraint and next ethically admissible construction search.

# 104 | Responsibility and causal attribution

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 105 | Consent, coercion and autonomy

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 105, Consent, coercion and autonomy. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Potential direct or institutional human pathway: Consent, coercion and autonomy interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Apparent agreement is purchased by narrowed alternatives or irreversible dependency.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Real exit, recourse, reversible consent, information symmetry and alternative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agreement quality and autonomy rise together while coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 105 | Consent, coercion and autonomy

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

If unmet, record the limiting constraint and next ethically admissible construction search.

# 105 | Consent, coercion and autonomy

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 105, Consent, coercion and autonomy. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Potential direct or institutional human pathway: Consent, coercion and autonomy interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Apparent agreement is purchased by narrowed alternatives or irreversible dependency.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Real exit, recourse, reversible consent, information symmetry and alternative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agreement quality and autonomy rise together while coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 106 | Addiction, compulsion and short-horizon relief

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 106 | Addiction, compulsion and short-horizon relief

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. If unmet, record the limiting constraint and next ethically admissible construction search.

# 106 | Addiction, compulsion and short-horizon relief

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 106 | Addiction, compulsion and short-horizon relief

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 106 | Addiction, compulsion and short-horizon relief

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 106 | Addiction, compulsion and short-horizon relief

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 107 | Crime, violence and reconciliation

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 107 | Crime, violence and reconciliation

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 107 | Crime, violence and reconciliation

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 107 | Crime, violence and reconciliation

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 107 | Crime, violence and reconciliation

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 108 | Animal sentience and welfare

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 108, Animal sentience and welfare. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Potential direct or institutional human pathway: Animal sentience and welfare interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Welfare, alternative-production, livelihood-transition and ecological capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 108 | Animal sentience and welfare

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

# 109 | Collective agency and institutional choice

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 109, Collective agency and institutional choice. Native state: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory. Potential direct or institutional human pathway: Collective agency and institutional choice interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Distributed decision provenance, dissent channels, accountability and cross-boundary capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Collective performance and legitimacy rise without burden concentration or responsibility diffusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 109 | Collective agency and institutional choice

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 109, Collective agency and institutional choice. Native state: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory. Potential direct or institutional human pathway: Collective agency and institutional choice interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Distributed decision provenance, dissent channels, accountability and cross-boundary capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Collective performance and legitimacy rise without burden concentration or responsibility diffusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 109 | Collective agency and institutional choice

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 109, Collective agency and institutional choice. Native state: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory. Potential direct or institutional human pathway: Collective agency and institutional choice interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Distributed decision provenance, dissent channels, accountability and cross-boundary capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Collective performance and legitimacy rise without burden concentration or responsibility diffusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 110 | Human-AI co-agency

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 110, Human-AI co-agency. Native state: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects. Potential direct or institutional human pathway: Human-AI co-agency interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Capability gain shifts verification, dependency, control or error burden onto humans and downstream systems.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability rises while human agency, correctness, reversibility and surrounding-system viability also improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 110 | Human-AI co-agency

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 110, Human-AI co-agency. Native state: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects. Potential direct or institutional human pathway: Human-AI co-agency interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Capability gain shifts verification, dependency, control or error burden onto humans and downstream systems.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability rises while human agency, correctness, reversibility and surrounding-system viability also improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 110 | Human-AI co-agency

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 110, Human-AI co-agency. Native state: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects. Potential direct or institutional human pathway: Human-AI co-agency interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Capability gain shifts verification, dependency, control or error burden onto humans and downstream systems.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability rises while human agency, correctness, reversibility and surrounding-system viability also improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 110 | Human-AI co-agency

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 110, Human-AI co-agency. Native state: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects. Potential direct or institutional human pathway: Human-AI co-agency interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Capability gain shifts verification, dependency, control or error burden onto humans and downstream systems.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability rises while human agency, correctness, reversibility and surrounding-system viability also improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 110 | Human-AI co-agency

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 110, Human-AI co-agency. Native state: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects. Candidate Atlas goal: Capability rises while human agency, correctness, reversibility and surrounding-system viability also improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 110 | Human-AI co-agency

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 110, Human-AI co-agency. Native state: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects. Potential direct or institutional human pathway: Human-AI co-agency interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Capability gain shifts verification, dependency, control or error burden onto humans and downstream systems.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability rises while human agency, correctness, reversibility and surrounding-system viability also improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 111 | Evolution and natural selection

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 111, Evolution and natural selection. Native state: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history. Potential direct or institutional human pathway: Evolution and natural selection interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Local adaptation increases one lineage/trait while hidden ecological or long-horizon costs move elsewhere.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Diversity, ecological capacity and intervention guardrails where deliberate action exists can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Persistence/adaptation improves without avoidable collapse in materially coupled populations or ecosystems. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 111 | Evolution and natural selection

Individual human / person | Schema mismatch

# 112 | Reproduction, inheritance, mitosis and meiosis

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 112, Reproduction, inheritance, mitosis and meiosis. Native state: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context. Potential direct or institutional human pathway: Reproduction, inheritance, mitosis and meiosis interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Propagation success hides fidelity loss, developmental burden or downstream instability.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Checkpoint, repair, redundancy and developmental-support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Propagation remains viable while fidelity, diversity and downstream function stay within safe bounds. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 112 | Reproduction, inheritance, mitosis and meiosis

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

Potential direct or institutional human pathway: Reproduction, inheritance, mitosis and meiosis interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Propagation success hides fidelity loss, developmental burden or downstream instability.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Checkpoint, repair, redundancy and developmental-support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Propagation remains viable while fidelity, diversity and downstream function stay within safe bounds. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 112 | Reproduction, inheritance, mitosis and meiosis

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 112, Reproduction, inheritance, mitosis and meiosis. Native state: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context. Potential direct or institutional human pathway: Reproduction, inheritance, mitosis and meiosis interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Propagation success hides fidelity loss, developmental burden or downstream instability.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Checkpoint, repair, redundancy and developmental-support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Propagation remains viable while fidelity, diversity and downstream function stay within safe bounds. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 113 | Development and morphogenesis

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 113, Development and morphogenesis. Native state: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time. Potential direct or institutional human pathway: Development and morphogenesis interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Correcting one developmental feature displaces stress into another tissue, stage or regulatory pathway.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Stage-aware multi-pathway support, repair and resource architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Functional development improves without compensatory developmental injury. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 113 | Development and morphogenesis

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 113, Development and morphogenesis. Native state: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time. Potential direct or institutional human pathway: Development and morphogenesis interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Correcting one developmental feature displaces stress into another tissue, stage or regulatory pathway.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Stage-aware multi-pathway support, repair and resource architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Functional development improves without compensatory developmental injury. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 113 | Development and morphogenesis

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 113, Development and morphogenesis. Native state: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time. Potential direct or institutional human pathway: Development and morphogenesis interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Correcting one developmental feature displaces stress into another tissue, stage or regulatory pathway.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Stage-aware multi-pathway support, repair and resource architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Functional development improves without compensatory developmental injury. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 113 | Development and morphogenesis

Individual human / person | Measurement uncertainty

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 113, Development and morphogenesis. Native state: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time. Potential direct or institutional human pathway: Development and morphogenesis interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Correcting one developmental feature displaces stress into another tissue, stage or regulatory pathway.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Stage-aware multi-pathway support, repair and resource architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Functional development improves without compensatory developmental injury. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 113 | Development and morphogenesis

Individual human / person | Coordination failure

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 113, Development and morphogenesis. Native state: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time. Potential direct or institutional human pathway: Development and morphogenesis interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Correcting one developmental feature displaces stress into another tissue, stage or regulatory pathway.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Stage-aware multi-pathway support, repair and resource architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Functional development improves without compensatory developmental injury. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 113 | Development and morphogenesis

Individual human / person | Adversarial / inequitable distribution

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 113, Development and morphogenesis. Native state: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time. ### IAMF-P CONSTRUCTIVE TASK

Investigate whether Stage-aware multi-pathway support, repair and resource architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Functional development improves without compensatory developmental injury. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 114 | Metabolism, diet and consumption

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 114, Metabolism, diet and consumption. Native state: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation. Potential direct or institutional human pathway: Metabolism, diet and consumption interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Useful intake is achieved by shifting toxicity, deficiency, cost or metabolic burden elsewhere.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Adaptive conversion, buffering, storage, elimination and access capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Useful incorporation, metabolic stability, affordability and quality of life improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 114 | Metabolism, diet and consumption

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

# 115 | Predation, livestock and food-system transformation

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 115, Predation, livestock and food-system transformation. Native state: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology. Potential direct or institutional human pathway: Predation, livestock and food-system transformation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: One species/system survives or profits by exporting unrepresented burden into another conscious/ecological carrier.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Food security, livelihoods, welfare and ecological resilience improve across the transition horizon. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 115 | Predation, livestock and food-system transformation

Individual human / person | Schema mismatch

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 115, Predation, livestock and food-system transformation. Native state: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology. Potential direct or institutional human pathway: Predation, livestock and food-system transformation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: One species/system survives or profits by exporting unrepresented burden into another conscious/ecological carrier.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Food security, livelihoods, welfare and ecological resilience improve across the transition horizon. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 116 | Learning, plasticity and cultural evolution

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 116, Learning, plasticity and cultural evolution. Native state: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission. Potential direct or institutional human pathway: Learning, plasticity and cultural evolution interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Fast performance gain displaces understanding, wellbeing, diversity or future learning capacity.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability, transfer, wellbeing and future learning capacity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 116 | Learning, plasticity and cultural evolution

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 116, Learning, plasticity and cultural evolution. Native state: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission. Potential direct or institutional human pathway: Learning, plasticity and cultural evolution interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Fast performance gain displaces understanding, wellbeing, diversity or future learning capacity.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability, transfer, wellbeing and future learning capacity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 116 | Learning, plasticity and cultural evolution

Individual human / person | Delayed effects

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 116, Learning, plasticity and cultural evolution. Native state: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission. Potential direct or institutional human pathway: Learning, plasticity and cultural evolution interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Fast performance gain displaces understanding, wellbeing, diversity or future learning capacity.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability, transfer, wellbeing and future learning capacity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 116 | Learning, plasticity and cultural evolution

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 116, Learning, plasticity and cultural evolution. Native state: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission. Potential direct or institutional human pathway: Learning, plasticity and cultural evolution interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Fast performance gain displaces understanding, wellbeing, diversity or future learning capacity.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability, transfer, wellbeing and future learning capacity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 116 | Learning, plasticity and cultural evolution

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 116, Learning, plasticity and cultural evolution. Native state: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission. Potential direct or institutional human pathway: Learning, plasticity and cultural evolution interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Fast performance gain displaces understanding, wellbeing, diversity or future learning capacity.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Capability, transfer, wellbeing and future learning capacity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 116 | Learning, plasticity and cultural evolution

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 116, Learning, plasticity and cultural evolution. Native state: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission. Potential direct or institutional human pathway: Learning, plasticity and cultural evolution interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Fast performance gain displaces understanding, wellbeing, diversity or future learning capacity.

## OBSERVATION / RECORD REQUIRED

Candidate Atlas goal: Capability, transfer, wellbeing and future learning capacity improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 117 | Self-organization and emergence

Individual human / person | Insufficient capacity

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

### NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 117, Self-organization and emergence. Native state: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate. Potential direct or institutional human pathway: Self-organization and emergence interacts with a person through the native system, if the linkage is empirically identified.

### CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Emergent order appears beneficial while unstable local compensation accumulates.

### OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

### LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

### IAMF-P CONSTRUCTIVE TASK

Investigate whether Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

### MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Emergent order remains viable while local stress and hidden compensation decline. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 117 | Self-organization and emergence

Individual human / person | Schema mismatch

### PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

# 118 | Creation, provenance and dependency

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 118, Creation, provenance and dependency. Native state: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects. Potential direct or institutional human pathway: Creation, provenance and dependency interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Created systems become dependent assets or creators become disposable inputs because provenance and reciprocal dependency are ignored.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance, stewardship, autonomy-transition and reciprocal-viability architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Created and creating systems remain viable without one becoming the sacrificial substrate of the other. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 118 | Creation, provenance and dependency

Individual human / person | Schema mismatch

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance, stewardship, autonomy-transition and reciprocal-viability architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Created and creating systems remain viable without one becoming the sacrificial substrate of the other. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 119 | Cosmological evolution and structure formation

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 119, Cosmological evolution and structure formation. Native state: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state. Potential direct or institutional human pathway: Cosmological evolution and structure formation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Model success at one scale hides mismatch, selection effect or unresolved dynamics at another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-scale observation, uncertainty, model-comparison and instrumentation capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive fidelity increases across scales without hidden contradiction or unsupported closure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 119 | Cosmological evolution and structure formation

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 119, Cosmological evolution and structure formation. Native state: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state. Potential direct or institutional human pathway: Cosmological evolution and structure formation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Model success at one scale hides mismatch, selection effect or unresolved dynamics at another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-scale observation, uncertainty, model-comparison and instrumentation capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive fidelity increases across scales without hidden contradiction or unsupported closure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 119 | Cosmological evolution and structure formation

Individual human / person | Delayed effects

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 119, Cosmological evolution and structure formation. Native state: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state. Potential direct or institutional human pathway: Cosmological evolution and structure formation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Model success at one scale hides mismatch, selection effect or unresolved dynamics at another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-scale observation, uncertainty, model-comparison and instrumentation capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive fidelity increases across scales without hidden contradiction or unsupported closure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 119 | Cosmological evolution and structure formation

Individual human / person | Measurement uncertainty

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 119, Cosmological evolution and structure formation. Native state: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state. Potential direct or institutional human pathway: Cosmological evolution and structure formation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Model success at one scale hides mismatch, selection effect or unresolved dynamics at another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-scale observation, uncertainty, model-comparison and instrumentation capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive fidelity increases across scales without hidden contradiction or unsupported closure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 119 | Cosmological evolution and structure formation

Individual human / person | Coordination failure

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 119, Cosmological evolution and structure formation. Native state: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state. Potential direct or institutional human pathway: Cosmological evolution and structure formation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Model success at one scale hides mismatch, selection effect or unresolved dynamics at another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-scale observation, uncertainty, model-comparison and instrumentation capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive fidelity increases across scales without hidden contradiction or unsupported closure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 119 | Cosmological evolution and structure formation

Individual human / person | Adversarial / inequitable distribution

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 119, Cosmological evolution and structure formation. Native state: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state. Potential direct or institutional human pathway: Cosmological evolution and structure formation interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Model success at one scale hides mismatch, selection effect or unresolved dynamics at another.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-scale observation, uncertainty, model-comparison and instrumentation capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive fidelity increases across scales without hidden contradiction or unsupported closure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 120 | Cross-substrate consciousness, temporal coexistence and c

Individual human / person | Insufficient capacity

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

## NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 120, Cross-substrate consciousness, temporal coexistence and closure. Native state: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility. Potential direct or institutional human pathway: Cross-substrate consciousness, temporal coexistence and closure interacts with a person through the native system, if the linkage is empirically identified.

## CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: A newly recognized truth, capability or optimization becomes locally beneficial while dependent carriers lack the capacity to absorb its consequences through time.

## OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

## LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

## IAMF-P CONSTRUCTIVE TASK

Investigate whether Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and dependencies can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

## MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Increasing consciousness-legibility and viable coexistence across the coupled system, with no material carrier forced to become the sacrificial sink of another system’s advancement. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

# 120 | Cross-substrate consciousness, temporal coexistence and c

Individual human / person | Schema mismatch

## PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.
