Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

010 to 054: consequential handoff

Human longevity and life-course planning -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

010 to 055: consequential handoff

Human longevity and life-course planning -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

010 to 056: consequential handoff

Human longevity and life-course planning -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

010 to 057: consequential handoff

Human longevity and life-course planning -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

010 to 058: consequential handoff

Human longevity and life-course planning -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

010 to 059: consequential handoff

Human longevity and life-course planning -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

010 to 060: consequential handoff

Human longevity and life-course planning -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

010 to 061: consequential handoff

Human longevity and life-course planning -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

010 to 062: consequential handoff

Human longevity and life-course planning -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

010 to 063: consequential handoff

Human longevity and life-course planning -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

010 to 064: consequential handoff

Human longevity and life-course planning -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

010 to 065: consequential handoff

Human longevity and life-course planning -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

010 to 066: consequential handoff

Human longevity and life-course planning -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

010 to 067: consequential handoff

Human longevity and life-course planning -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

010 to 068: consequential handoff

Human longevity and life-course planning -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

010 to 069: consequential handoff

Human longevity and life-course planning -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

010 to 070: consequential handoff

Human longevity and life-course planning -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

010 to 071: consequential handoff

Human longevity and life-course planning -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

010 to 072: consequential handoff

Human longevity and life-course planning -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

010 to 073: consequential handoff

Human longevity and life-course planning -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

010 to 074: consequential handoff

Human longevity and life-course planning -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

010 to 075: consequential handoff

Human longevity and life-course planning -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

010 to 076: consequential handoff

Human longevity and life-course planning -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

010 to 077: consequential handoff

Human longevity and life-course planning -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

010 to 078: consequential handoff

Human longevity and life-course planning -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

010 to 079: consequential handoff

Human longevity and life-course planning -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

010 to 080: consequential handoff

Human longevity and life-course planning -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

010 to 081: consequential handoff

Human longevity and life-course planning -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

010 to 082: consequential handoff

Human longevity and life-course planning -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

010 to 083: consequential handoff

Human longevity and life-course planning -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

010 to 084: consequential handoff

Human longevity and life-course planning -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

010 to 085: consequential handoff

Human longevity and life-course planning -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

010 to 086: consequential handoff

Human longevity and life-course planning -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

010 to 087: consequential handoff

Human longevity and life-course planning -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

010 to 088: consequential handoff

Human longevity and life-course planning -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

010 to 089: consequential handoff

Human longevity and life-course planning -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

010 to 090: consequential handoff

Human longevity and life-course planning -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

010 to 091: consequential handoff

Human longevity and life-course planning -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

010 to 092: consequential handoff

Human longevity and life-course planning -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

010 to 093: consequential handoff

Human longevity and life-course planning -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

010 to 094: consequential handoff

Human longevity and life-course planning -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

010 to 095: consequential handoff

Human longevity and life-course planning -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

010 to 096: consequential handoff

Human longevity and life-course planning -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

010 to 097: consequential handoff

Human longevity and life-course planning -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

010 to 098: consequential handoff

Human longevity and life-course planning -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

010 to 099: consequential handoff

Human longevity and life-course planning -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

010 to 100: consequential handoff

Human longevity and life-course planning -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

010 to 101: consequential handoff

Human longevity and life-course planning -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

010 to 102: consequential handoff

Human longevity and life-course planning -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

010 to 103: consequential handoff

Human longevity and life-course planning -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

010 to 104: consequential handoff

Human longevity and life-course planning -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

010 to 105: consequential handoff

Human longevity and life-course planning -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

010 to 106: consequential handoff

Human longevity and life-course planning -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

010 to 107: consequential handoff

Human longevity and life-course planning -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

010 to 108: consequential handoff

Human longevity and life-course planning -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

010 to 109: consequential handoff

Human longevity and life-course planning -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

010 to 110: consequential handoff

Human longevity and life-course planning -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

010 to 111: consequential handoff

Human longevity and life-course planning -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

010 to 112: consequential handoff

Human longevity and life-course planning -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

010 to 113: consequential handoff

Human longevity and life-course planning -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

010 to 114: consequential handoff

Human longevity and life-course planning -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

010 to 115: consequential handoff

Human longevity and life-course planning -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

010 to 116: consequential handoff

Human longevity and life-course planning -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

010 to 117: consequential handoff

Human longevity and life-course planning -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

010 to 118: consequential handoff

Human longevity and life-course planning -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

010 to 119: consequential handoff

Human longevity and life-course planning -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

010 to 120: consequential handoff

Human longevity and life-course planning -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Human longevity and life-course planning into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chronological age or retirement age. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, institutions, future self. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Life-course capital and care architecture. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal life-course cohort' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 114-120 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

010: Human longevity and life-course planning

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal life-course cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Human longevity and life-course planning

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal life-course cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Human longevity and life-course planning

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal life-course cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Household / family / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal life-course cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Candidate setting: Healthcare / care team. handoff links treatment, safety, continuity, caregiving and costs. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal life-course cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Local government / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal life-course cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Scientific laboratory / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

Public infrastructure / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal life-course cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal life-course cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Human longevity and life-course planning

Interregional / planetary / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Human longevity and life-course planning is described in the Atlas as: Healthspan, lifespan, finances, relationships, purpose and care capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Longer life shifts burden to morbidity, savings or care system. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, institutions, future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Life-course capital and care architecture. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Added years are healthy, funded, connected and autonomous. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal life-course cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

010: Evidence and source reconstruction

Human longevity and life-course planning | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Boundary divergence

Human longevity and life-course planning | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Causal diagram and identifiability

Human longevity and life-course planning | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Receiving carrier identification

Human longevity and life-course planning | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Hidden compensation accounting

Human longevity and life-course planning | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Native units and dimensional integrity

Human longevity and life-course planning | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Capacity specification

Human longevity and life-course planning | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Intervention design

Human longevity and life-course planning | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Incumbent parity contest

Human longevity and life-course planning | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Time-window and recurrence

Human longevity and life-course planning | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Ethical and legal safety

Human longevity and life-course planning | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Sensitivity and negative controls

Human longevity and life-course planning | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Replication and provenance

Human longevity and life-course planning | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

010: Cross-domain invariant contest

Human longevity and life-course planning | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 010: Human longevity and life-course planning; original author status: Constructive protocol. Native state: Healthspan, lifespan, finances, relationships, purpose and care capacity.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chronological age or retirement age. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Longer life shifts burden to morbidity, savings or care system. The relevant receiving carriers are: Person, family, institutions, future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Life-course capital and care architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Added years are healthy, funded, connected and autonomous.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal life-course cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 010, pp. 114-120 (Rufino 2026).

Adapter 011: Psychology and social legibility

Psychology and meaning | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Longitudinal capability, burden, trauma, environment, relationships and compensation

RECORDED RECEIVING SCHEMA

Snapshot diagnosis or social category

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: High function hides biological and relational cost. Candidate receivers: Person, family, employer, clinician.

EXISTING CAPACITY DESIGN

Multidimensional schema plus support matched to hidden burden

PROTECTED OUTCOME STATED BY THE AUTHOR

Function, health, autonomy and relationship quality rise while compensation falls

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Longitudinal external cohort. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011 | Psychology and social legibility

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: High function hides biological and relational cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

011 | Psychology and social legibility

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: High function hides biological and relational cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

011 | Psychology and social legibility

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: High function hides biological and relational cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

011 | Psychology and social legibility

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: High function hides biological and relational cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

011 | Psychology and social legibility

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: High function hides biological and relational cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

011 | Psychology and social legibility

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 011, Psychology and social legibility. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation. Potential direct or institutional human pathway: Psychology and social legibility interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: High function hides biological and relational cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multidimensional schema plus support matched to hidden burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Function, health, autonomy and relationship quality rise while compensation falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

011 to 001: consequential handoff

Psychology and social legibility -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

011 to 002: consequential handoff

Psychology and social legibility -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

011 to 003: consequential handoff

Psychology and social legibility -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

011 to 004: consequential handoff

Psychology and social legibility -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

011 to 005: consequential handoff

Psychology and social legibility -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

011 to 006: consequential handoff

Psychology and social legibility -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

011 to 007: consequential handoff

Psychology and social legibility -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

011 to 008: consequential handoff

Psychology and social legibility -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

011 to 009: consequential handoff

Psychology and social legibility -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

011 to 010: consequential handoff

Psychology and social legibility -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

011 to 011: consequential handoff

Psychology and social legibility -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Psychology and social legibility becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 122-128; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

011 to 012: consequential handoff

Psychology and social legibility -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

011 to 013: consequential handoff

Psychology and social legibility -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

011 to 014: consequential handoff

Psychology and social legibility -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

011 to 015: consequential handoff

Psychology and social legibility -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

011 to 016: consequential handoff

Psychology and social legibility -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

011 to 017: consequential handoff

Psychology and social legibility -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

011 to 018: consequential handoff

Psychology and social legibility -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

011 to 019: consequential handoff

Psychology and social legibility -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

011 to 020: consequential handoff

Psychology and social legibility -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

011 to 021: consequential handoff

Psychology and social legibility -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

011 to 022: consequential handoff

Psychology and social legibility -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

011 to 023: consequential handoff

Psychology and social legibility -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

011 to 024: consequential handoff

Psychology and social legibility -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

011 to 025: consequential handoff

Psychology and social legibility -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

011 to 026: consequential handoff

Psychology and social legibility -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

011 to 027: consequential handoff

Psychology and social legibility -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

011 to 028: consequential handoff

Psychology and social legibility -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

011 to 029: consequential handoff

Psychology and social legibility -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

011 to 030: consequential handoff

Psychology and social legibility -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

011 to 031: consequential handoff

Psychology and social legibility -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

011 to 032: consequential handoff

Psychology and social legibility -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

011 to 033: consequential handoff

Psychology and social legibility -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

011 to 034: consequential handoff

Psychology and social legibility -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

011 to 035: consequential handoff

Psychology and social legibility -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

011 to 036: consequential handoff

Psychology and social legibility -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

011 to 037: consequential handoff

Psychology and social legibility -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

011 to 038: consequential handoff

Psychology and social legibility -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

011 to 039: consequential handoff

Psychology and social legibility -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

011 to 040: consequential handoff

Psychology and social legibility -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

011 to 041: consequential handoff

Psychology and social legibility -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

011 to 042: consequential handoff

Psychology and social legibility -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

011 to 043: consequential handoff

Psychology and social legibility -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

011 to 044: consequential handoff

Psychology and social legibility -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

011 to 045: consequential handoff

Psychology and social legibility -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

011 to 046: consequential handoff

Psychology and social legibility -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

011 to 047: consequential handoff

Psychology and social legibility -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

011 to 048: consequential handoff

Psychology and social legibility -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

011 to 049: consequential handoff

Psychology and social legibility -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

011 to 050: consequential handoff

Psychology and social legibility -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

011 to 051: consequential handoff

Psychology and social legibility -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

011 to 052: consequential handoff

Psychology and social legibility -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

011 to 053: consequential handoff

Psychology and social legibility -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

011 to 054: consequential handoff

Psychology and social legibility -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

011 to 055: consequential handoff

Psychology and social legibility -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

011 to 056: consequential handoff

Psychology and social legibility -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

011 to 057: consequential handoff

Psychology and social legibility -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

011 to 058: consequential handoff

Psychology and social legibility -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

011 to 059: consequential handoff

Psychology and social legibility -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

011 to 060: consequential handoff

Psychology and social legibility -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

011 to 061: consequential handoff

Psychology and social legibility -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

011 to 062: consequential handoff

Psychology and social legibility -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

011 to 063: consequential handoff

Psychology and social legibility -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

011 to 064: consequential handoff

Psychology and social legibility -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

011 to 065: consequential handoff

Psychology and social legibility -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

011 to 066: consequential handoff

Psychology and social legibility -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

011 to 067: consequential handoff

Psychology and social legibility -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

011 to 068: consequential handoff

Psychology and social legibility -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

011 to 069: consequential handoff

Psychology and social legibility -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

011 to 070: consequential handoff

Psychology and social legibility -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

011 to 071: consequential handoff

Psychology and social legibility -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

011 to 072: consequential handoff

Psychology and social legibility -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

011 to 073: consequential handoff

Psychology and social legibility -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

011 to 074: consequential handoff

Psychology and social legibility -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

011 to 075: consequential handoff

Psychology and social legibility -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

011 to 076: consequential handoff

Psychology and social legibility -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

011 to 077: consequential handoff

Psychology and social legibility -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

011 to 078: consequential handoff

Psychology and social legibility -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

011 to 079: consequential handoff

Psychology and social legibility -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

011 to 080: consequential handoff

Psychology and social legibility -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

011 to 081: consequential handoff

Psychology and social legibility -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

011 to 082: consequential handoff

Psychology and social legibility -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

011 to 083: consequential handoff

Psychology and social legibility -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

011 to 084: consequential handoff

Psychology and social legibility -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

011 to 085: consequential handoff

Psychology and social legibility -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

011 to 086: consequential handoff

Psychology and social legibility -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

011 to 087: consequential handoff

Psychology and social legibility -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

011 to 088: consequential handoff

Psychology and social legibility -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

011 to 089: consequential handoff

Psychology and social legibility -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

011 to 090: consequential handoff

Psychology and social legibility -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

011 to 091: consequential handoff

Psychology and social legibility -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

011 to 092: consequential handoff

Psychology and social legibility -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

011 to 093: consequential handoff

Psychology and social legibility -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

011 to 094: consequential handoff

Psychology and social legibility -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

011 to 095: consequential handoff

Psychology and social legibility -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

011 to 096: consequential handoff

Psychology and social legibility -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

011 to 097: consequential handoff

Psychology and social legibility -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

011 to 098: consequential handoff

Psychology and social legibility -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

011 to 099: consequential handoff

Psychology and social legibility -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

011 to 100: consequential handoff

Psychology and social legibility -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

011 to 101: consequential handoff

Psychology and social legibility -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

011 to 102: consequential handoff

Psychology and social legibility -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

011 to 103: consequential handoff

Psychology and social legibility -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

011 to 104: consequential handoff

Psychology and social legibility -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

011 to 105: consequential handoff

Psychology and social legibility -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

011 to 106: consequential handoff

Psychology and social legibility -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

011 to 107: consequential handoff

Psychology and social legibility -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

011 to 108: consequential handoff

Psychology and social legibility -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

011 to 109: consequential handoff

Psychology and social legibility -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

011 to 110: consequential handoff

Psychology and social legibility -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

011 to 111: consequential handoff

Psychology and social legibility -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

011 to 112: consequential handoff

Psychology and social legibility -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

011 to 113: consequential handoff

Psychology and social legibility -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

011 to 114: consequential handoff

Psychology and social legibility -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

011 to 115: consequential handoff

Psychology and social legibility -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

011 to 116: consequential handoff

Psychology and social legibility -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

011 to 117: consequential handoff

Psychology and social legibility -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

011 to 118: consequential handoff

Psychology and social legibility -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

011 to 119: consequential handoff

Psychology and social legibility -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

011 to 120: consequential handoff

Psychology and social legibility -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Psychology and social legibility into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Snapshot diagnosis or social category. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, family, employer, clinician. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multidimensional schema plus support matched to hidden burden. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal external cohort' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 122-128 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

011: Psychology and social legibility

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Psychology and social legibility is described in the Atlas as: Longitudinal capability, burden, trauma, environment, relationships and compensation. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

High function hides biological and relational cost. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, employer, clinician. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multidimensional schema plus support matched to hidden burden. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Function, health, autonomy and relationship quality rise while compensation falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal external cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Psychology and social legibility

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Psychology and social legibility is described in the Atlas as: Longitudinal capability, burden, trauma, environment, relationships and compensation. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

High function hides biological and relational cost. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, employer, clinician. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multidimensional schema plus support matched to hidden burden. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, employer, clinician. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multidimensional schema plus support matched to hidden burden. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Function, health, autonomy and relationship quality rise while compensation falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal external cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

011: Psychology and social legibility

School / university / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Psychology and social legibility is described in the Atlas as: Longitudinal capability, burden, trauma, environment, relationships and compensation. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

High function hides biological and relational cost. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, employer, clinician. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multidimensional schema plus support matched to hidden burden. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Function, health, autonomy and relationship quality rise while compensation falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal external cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

011: Psychology and social legibility

Local government / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Psychology and social legibility is described in the Atlas as: Longitudinal capability, burden, trauma, environment, relationships and compensation. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

High function hides biological and relational cost. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, employer, clinician. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multidimensional schema plus support matched to hidden burden. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Function, health, autonomy and relationship quality rise while compensation falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal external cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Psychology and social legibility

Local government / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Psychology and social legibility is described in the Atlas as: Longitudinal capability, burden, trauma, environment, relationships and compensation. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

High function hides biological and relational cost. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, employer, clinician. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multidimensional schema plus support matched to hidden burden. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Function, health, autonomy and relationship quality rise while compensation falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

011: Psychology and social legibility

Ecological catchment / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Psychology and social legibility is described in the Atlas as: Longitudinal capability, burden, trauma, environment, relationships and compensation. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

High function hides biological and relational cost. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, employer, clinician. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multidimensional schema plus support matched to hidden burden. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Function, health, autonomy and relationship quality rise while compensation falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

High function hides biological and relational cost. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, employer, clinician. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multidimensional schema plus support matched to hidden burden. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Function, health, autonomy and relationship quality rise while compensation falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal external cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

011: Psychology and social legibility

Public infrastructure / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Psychology and social legibility is described in the Atlas as: Longitudinal capability, burden, trauma, environment, relationships and compensation. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

High function hides biological and relational cost. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, family, employer, clinician. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multidimensional schema plus support matched to hidden burden. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

011: Evidence and source reconstruction

Psychology and social legibility | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Boundary divergence

Psychology and social legibility | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

Psychology and social legibility | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Hidden compensation accounting

Psychology and social legibility | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

011: Native units and dimensional integrity

Psychology and social legibility | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

011: Capacity specification

Psychology and social legibility | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Intervention design

Psychology and social legibility | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

011: Incumbent parity contest

Psychology and social legibility | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Time-window and recurrence

Psychology and social legibility | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Ethical and legal safety

Psychology and social legibility | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Sensitivity and negative controls

Psychology and social legibility | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Replication and provenance

Psychology and social legibility | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

011: Cross-domain invariant contest

Psychology and social legibility | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 011: Psychology and social legibility; original author status: Origin-linked structural fit. Native state: Longitudinal capability, burden, trauma, environment, relationships and compensation.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Snapshot diagnosis or social category. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: High function hides biological and relational cost. The relevant receiving carriers are: Person, family, employer, clinician.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multidimensional schema plus support matched to hidden burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Function, health, autonomy and relationship quality rise while compensation falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal external cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 011, pp. 122-128 (Rufino 2026).

Adapter 012: Identity and self-model

Psychology and meaning | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Attributes, history, roles, values, capabilities and contexts

RECORDED RECEIVING SCHEMA

Single identity label or credential

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Recognition in one schema suppresses other valid dimensions. Candidate receivers: Person and receiving institutions.

EXISTING CAPACITY DESIGN

Selective multi-context identity graph with provenance

PROTECTED OUTCOME STATED BY THE AUTHOR

Legibility and autonomy improve without forced overexposure

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Cross-context identity study. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012 | Identity and self-model

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 012, Identity and self-model. Native state: Attributes, history, roles, values, capabilities and contexts. Potential direct or institutional human pathway: Identity and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Recognition in one schema suppresses other valid dimensions.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Selective multi-context identity graph with provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility and autonomy improve without forced overexposure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

012 | Identity and self-model

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 012, Identity and self-model. Native state: Attributes, history, roles, values, capabilities and contexts. Potential direct or institutional human pathway: Identity and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Recognition in one schema suppresses other valid dimensions.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Selective multi-context identity graph with provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility and autonomy improve without forced overexposure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

012 | Identity and self-model

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 012, Identity and self-model. Native state: Attributes, history, roles, values, capabilities and contexts. Potential direct or institutional human pathway: Identity and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Recognition in one schema suppresses other valid dimensions.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Selective multi-context identity graph with provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility and autonomy improve without forced overexposure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

012 | Identity and self-model

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 012, Identity and self-model. Native state: Attributes, history, roles, values, capabilities and contexts. Potential direct or institutional human pathway: Identity and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Recognition in one schema suppresses other valid dimensions.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Selective multi-context identity graph with provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility and autonomy improve without forced overexposure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

012 | Identity and self-model

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 012, Identity and self-model. Native state: Attributes, history, roles, values, capabilities and contexts. Potential direct or institutional human pathway: Identity and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Recognition in one schema suppresses other valid dimensions.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Selective multi-context identity graph with provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility and autonomy improve without forced overexposure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

012 | Identity and self-model

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 012, Identity and self-model. Native state: Attributes, history, roles, values, capabilities and contexts. Potential direct or institutional human pathway: Identity and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Recognition in one schema suppresses other valid dimensions.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Selective multi-context identity graph with provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility and autonomy improve without forced overexposure. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

012 to 001: consequential handoff

Identity and self-model -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

012 to 002: consequential handoff

Identity and self-model -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

012 to 003: consequential handoff

Identity and self-model -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

012 to 004: consequential handoff

Identity and self-model -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

012 to 005: consequential handoff

Identity and self-model -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

012 to 006: consequential handoff

Identity and self-model -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

012 to 007: consequential handoff

Identity and self-model -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

012 to 008: consequential handoff

Identity and self-model -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

012 to 009: consequential handoff

Identity and self-model -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

012 to 010: consequential handoff

Identity and self-model -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

012 to 011: consequential handoff

Identity and self-model -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

012 to 012: consequential handoff

Identity and self-model -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Identity and self-model becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 129-135; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

012 to 013: consequential handoff

Identity and self-model -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

012 to 014: consequential handoff

Identity and self-model -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

012 to 015: consequential handoff

Identity and self-model -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

012 to 016: consequential handoff

Identity and self-model -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

012 to 017: consequential handoff

Identity and self-model -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

012 to 018: consequential handoff

Identity and self-model -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

012 to 019: consequential handoff

Identity and self-model -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

012 to 020: consequential handoff

Identity and self-model -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

012 to 021: consequential handoff

Identity and self-model -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

012 to 022: consequential handoff

Identity and self-model -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

012 to 023: consequential handoff

Identity and self-model -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

012 to 024: consequential handoff

Identity and self-model -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

012 to 025: consequential handoff

Identity and self-model -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

012 to 026: consequential handoff

Identity and self-model -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

012 to 027: consequential handoff

Identity and self-model -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

012 to 028: consequential handoff

Identity and self-model -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

012 to 029: consequential handoff

Identity and self-model -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

012 to 030: consequential handoff

Identity and self-model -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

012 to 031: consequential handoff

Identity and self-model -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

012 to 032: consequential handoff

Identity and self-model -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

012 to 033: consequential handoff

Identity and self-model -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

012 to 034: consequential handoff

Identity and self-model -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

012 to 035: consequential handoff

Identity and self-model -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

012 to 036: consequential handoff

Identity and self-model -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

012 to 037: consequential handoff

Identity and self-model -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

012 to 038: consequential handoff

Identity and self-model -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

012 to 039: consequential handoff

Identity and self-model -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

012 to 040: consequential handoff

Identity and self-model -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

012 to 041: consequential handoff

Identity and self-model -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

012 to 042: consequential handoff

Identity and self-model -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

012 to 043: consequential handoff

Identity and self-model -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

012 to 044: consequential handoff

Identity and self-model -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

012 to 045: consequential handoff

Identity and self-model -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

012 to 046: consequential handoff

Identity and self-model -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

012 to 047: consequential handoff

Identity and self-model -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

012 to 048: consequential handoff

Identity and self-model -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

012 to 049: consequential handoff

Identity and self-model -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

012 to 050: consequential handoff

Identity and self-model -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

012 to 051: consequential handoff

Identity and self-model -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

012 to 052: consequential handoff

Identity and self-model -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

012 to 053: consequential handoff

Identity and self-model -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

012 to 054: consequential handoff

Identity and self-model -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

012 to 055: consequential handoff

Identity and self-model -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

012 to 056: consequential handoff

Identity and self-model -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

012 to 057: consequential handoff

Identity and self-model -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

012 to 058: consequential handoff

Identity and self-model -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

012 to 059: consequential handoff

Identity and self-model -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

012 to 060: consequential handoff

Identity and self-model -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

012 to 061: consequential handoff

Identity and self-model -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

012 to 062: consequential handoff

Identity and self-model -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

012 to 063: consequential handoff

Identity and self-model -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

012 to 064: consequential handoff

Identity and self-model -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

012 to 065: consequential handoff

Identity and self-model -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

012 to 066: consequential handoff

Identity and self-model -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

012 to 067: consequential handoff

Identity and self-model -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

012 to 068: consequential handoff

Identity and self-model -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

012 to 069: consequential handoff

Identity and self-model -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

012 to 070: consequential handoff

Identity and self-model -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

012 to 071: consequential handoff

Identity and self-model -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

012 to 072: consequential handoff

Identity and self-model -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

012 to 073: consequential handoff

Identity and self-model -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

012 to 074: consequential handoff

Identity and self-model -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

012 to 075: consequential handoff

Identity and self-model -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

012 to 076: consequential handoff

Identity and self-model -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

012 to 077: consequential handoff

Identity and self-model -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

012 to 078: consequential handoff

Identity and self-model -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

012 to 079: consequential handoff

Identity and self-model -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

012 to 080: consequential handoff

Identity and self-model -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

012 to 081: consequential handoff

Identity and self-model -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

012 to 082: consequential handoff

Identity and self-model -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

012 to 083: consequential handoff

Identity and self-model -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

012 to 084: consequential handoff

Identity and self-model -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

012 to 085: consequential handoff

Identity and self-model -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

012 to 086: consequential handoff

Identity and self-model -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

012 to 087: consequential handoff

Identity and self-model -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

012 to 088: consequential handoff

Identity and self-model -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

012 to 089: consequential handoff

Identity and self-model -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

012 to 090: consequential handoff

Identity and self-model -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

012 to 091: consequential handoff

Identity and self-model -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

012 to 092: consequential handoff

Identity and self-model -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

012 to 093: consequential handoff

Identity and self-model -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

012 to 094: consequential handoff

Identity and self-model -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

012 to 095: consequential handoff

Identity and self-model -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

012 to 096: consequential handoff

Identity and self-model -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

012 to 097: consequential handoff

Identity and self-model -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

012 to 098: consequential handoff

Identity and self-model -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

012 to 099: consequential handoff

Identity and self-model -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

012 to 100: consequential handoff

Identity and self-model -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

012 to 101: consequential handoff

Identity and self-model -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

012 to 102: consequential handoff

Identity and self-model -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

012 to 103: consequential handoff

Identity and self-model -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

012 to 104: consequential handoff

Identity and self-model -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

012 to 105: consequential handoff

Identity and self-model -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

012 to 106: consequential handoff

Identity and self-model -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

012 to 107: consequential handoff

Identity and self-model -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

012 to 108: consequential handoff

Identity and self-model -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

012 to 109: consequential handoff

Identity and self-model -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

012 to 110: consequential handoff

Identity and self-model -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

012 to 111: consequential handoff

Identity and self-model -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

012 to 112: consequential handoff

Identity and self-model -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

012 to 113: consequential handoff

Identity and self-model -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

012 to 114: consequential handoff

Identity and self-model -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

012 to 115: consequential handoff

Identity and self-model -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

012 to 116: consequential handoff

Identity and self-model -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

012 to 117: consequential handoff

Identity and self-model -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

012 to 118: consequential handoff

Identity and self-model -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

012 to 119: consequential handoff

Identity and self-model -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

012 to 120: consequential handoff

Identity and self-model -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Identity and self-model into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single identity label or credential. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person and receiving institutions. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Selective multi-context identity graph with provenance. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Cross-context identity study' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 129-135 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

012: Identity and self-model

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Identity and self-model is described in the Atlas as: Attributes, history, roles, values, capabilities and contexts. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Recognition in one schema suppresses other valid dimensions. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility and autonomy improve without forced overexposure. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Cross-context identity study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Identity and self-model

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Identity and self-model is described in the Atlas as: Attributes, history, roles, values, capabilities and contexts. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Recognition in one schema suppresses other valid dimensions. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Enterprise / cooperative. handoff links throughput, workers, buyers, capital and governance. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Identity and self-model is described in the Atlas as: Attributes, history, roles, values, capabilities and contexts. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Recognition in one schema suppresses other valid dimensions. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility and autonomy improve without forced overexposure. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Cross-context identity study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

012: Identity and self-model

Ecological catchment / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Identity and self-model is described in the Atlas as: Attributes, history, roles, values, capabilities and contexts. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Recognition in one schema suppresses other valid dimensions. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility and autonomy improve without forced overexposure. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Cross-context identity study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

012: Identity and self-model

Ecological catchment / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Identity and self-model is described in the Atlas as: Attributes, history, roles, values, capabilities and contexts. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Recognition in one schema suppresses other valid dimensions. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

012: Identity and self-model

Scientific laboratory / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Identity and self-model is described in the Atlas as: Attributes, history, roles, values, capabilities and contexts. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Recognition in one schema suppresses other valid dimensions. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility and autonomy improve without forced overexposure. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Cross-context identity study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Identity and self-model

Digital / AI service / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Identity and self-model is described in the Atlas as: Attributes, history, roles, values, capabilities and contexts. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Recognition in one schema suppresses other valid dimensions. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

012: Identity and self-model

Interregional / planetary / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Identity and self-model is described in the Atlas as: Attributes, history, roles, values, capabilities and contexts. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Recognition in one schema suppresses other valid dimensions. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility and autonomy improve without forced overexposure. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

012: Identity and self-model

Interregional / planetary / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Identity and self-model is described in the Atlas as: Attributes, history, roles, values, capabilities and contexts. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Recognition in one schema suppresses other valid dimensions. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person and receiving institutions. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Selective multi-context identity graph with provenance. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility and autonomy improve without forced overexposure. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

012: Evidence and source reconstruction

Identity and self-model | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

RETEST AND SCOPE CONTROL

Candidate decisive method: Cross-context identity study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Boundary divergence

Identity and self-model | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

RETEST AND SCOPE CONTROL

Candidate decisive method: Cross-context identity study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Causal diagram and identifiability

Identity and self-model | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

012: Receiving carrier identification

Identity and self-model | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

RETEST AND SCOPE CONTROL

Candidate decisive method: Cross-context identity study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Hidden compensation accounting

Identity and self-model | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

RETEST AND SCOPE CONTROL

Candidate decisive method: Cross-context identity study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

012: Native units and dimensional integrity

Identity and self-model | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

RETEST AND SCOPE CONTROL

Candidate decisive method: Cross-context identity study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Capacity specification

Identity and self-model | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

012: Intervention design

Identity and self-model | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

RETEST AND SCOPE CONTROL

012: Incumbent parity contest

Identity and self-model | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

Candidate decisive method: Cross-context identity study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Time-window and recurrence

Identity and self-model | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

RETEST AND SCOPE CONTROL

Candidate decisive method: Cross-context identity study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Ethical and legal safety

Identity and self-model | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

012: Sensitivity and negative controls

Identity and self-model | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Replication and provenance

Identity and self-model | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

RETEST AND SCOPE CONTROL

Candidate decisive method: Cross-context identity study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 012, pp. 129-135 (Rufino 2026).

012: Cross-domain invariant contest

Identity and self-model | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 012: Identity and self-model; original author status: Constructive protocol. Native state: Attributes, history, roles, values, capabilities and contexts.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single identity label or credential. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Recognition in one schema suppresses other valid dimensions. The relevant receiving carriers are: Person and receiving institutions.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Selective multi-context identity graph with provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility and autonomy improve without forced overexposure.

RETEST AND SCOPE CONTROL

Candidate decisive method: Cross-context identity study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Adapter 013: Relationships and intimacy

Psychology and meaning | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Needs, boundaries, consent, trust, history, resources and reciprocity

RECORDED RECEIVING SCHEMA

Relationship status or personality label

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: One partner compensates for unspoken constraints. Candidate receivers: Partners and wider support network.

EXISTING CAPACITY DESIGN

Reciprocal state and burden ledger plus consent architecture

PROTECTED OUTCOME STATED BY THE AUTHOR

Safety, intimacy, autonomy and fairness improve together

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Dyadic longitudinal study. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026).

013 | Relationships and intimacy

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

013 | Relationships and intimacy

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

013 | Relationships and intimacy

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

013 | Relationships and intimacy

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

013 | Relationships and intimacy

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

013 | Relationships and intimacy

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 013, Relationships and intimacy. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity. Potential direct or institutional human pathway: Relationships and intimacy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: One partner compensates for unspoken constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Reciprocal state and burden ledger plus consent architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Safety, intimacy, autonomy and fairness improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

013 to 001: consequential handoff

Relationships and intimacy -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

013 to 002: consequential handoff

Relationships and intimacy -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

013 to 003: consequential handoff

Relationships and intimacy -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

013 to 004: consequential handoff

Relationships and intimacy -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Clinical trials + patient-reported and partner-impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

013 to 005: consequential handoff

Relationships and intimacy -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

013 to 006: consequential handoff

Relationships and intimacy -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

013 to 007: consequential handoff

Relationships and intimacy -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

013 to 008: consequential handoff

Relationships and intimacy -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

013 to 009: consequential handoff

Relationships and intimacy -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

013 to 010: consequential handoff

Relationships and intimacy -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

013 to 011: consequential handoff

Relationships and intimacy -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

013 to 012: consequential handoff

Relationships and intimacy -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

013 to 013: consequential handoff

Relationships and intimacy -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Relationships and intimacy becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 136-142; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

013 to 014: consequential handoff

Relationships and intimacy -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

013 to 015: consequential handoff

Relationships and intimacy -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

013 to 016: consequential handoff

Relationships and intimacy -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

013 to 017: consequential handoff

Relationships and intimacy -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

013 to 018: consequential handoff

Relationships and intimacy -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

013 to 019: consequential handoff

Relationships and intimacy -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

013 to 020: consequential handoff

Relationships and intimacy -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

013 to 021: consequential handoff

Relationships and intimacy -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

013 to 022: consequential handoff

Relationships and intimacy -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

013 to 023: consequential handoff

Relationships and intimacy -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

013 to 024: consequential handoff

Relationships and intimacy -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

013 to 025: consequential handoff

Relationships and intimacy -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

013 to 026: consequential handoff

Relationships and intimacy -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

013 to 027: consequential handoff

Relationships and intimacy -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

013 to 028: consequential handoff

Relationships and intimacy -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

013 to 029: consequential handoff

Relationships and intimacy -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

013 to 030: consequential handoff

Relationships and intimacy -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

013 to 031: consequential handoff

Relationships and intimacy -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

013 to 032: consequential handoff

Relationships and intimacy -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

013 to 033: consequential handoff

Relationships and intimacy -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

013 to 034: consequential handoff

Relationships and intimacy -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

013 to 035: consequential handoff

Relationships and intimacy -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

013 to 036: consequential handoff

Relationships and intimacy -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

013 to 037: consequential handoff

Relationships and intimacy -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

013 to 038: consequential handoff

Relationships and intimacy -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

013 to 039: consequential handoff

Relationships and intimacy -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

013 to 040: consequential handoff

Relationships and intimacy -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

013 to 041: consequential handoff

Relationships and intimacy -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

013 to 042: consequential handoff

Relationships and intimacy -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

013 to 043: consequential handoff

Relationships and intimacy -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

013 to 044: consequential handoff

Relationships and intimacy -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

013 to 045: consequential handoff

Relationships and intimacy -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

013 to 046: consequential handoff

Relationships and intimacy -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

013 to 047: consequential handoff

Relationships and intimacy -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

013 to 048: consequential handoff

Relationships and intimacy -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

013 to 049: consequential handoff

Relationships and intimacy -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

013 to 050: consequential handoff

Relationships and intimacy -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

013 to 051: consequential handoff

Relationships and intimacy -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

013 to 052: consequential handoff

Relationships and intimacy -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

013 to 053: consequential handoff

Relationships and intimacy -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

013 to 054: consequential handoff

Relationships and intimacy -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

013 to 055: consequential handoff

Relationships and intimacy -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

013 to 056: consequential handoff

Relationships and intimacy -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

013 to 057: consequential handoff

Relationships and intimacy -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

013 to 058: consequential handoff

Relationships and intimacy -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

013 to 059: consequential handoff

Relationships and intimacy -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

013 to 060: consequential handoff

Relationships and intimacy -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

013 to 061: consequential handoff

Relationships and intimacy -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

013 to 062: consequential handoff

Relationships and intimacy -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

013 to 063: consequential handoff

Relationships and intimacy -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

013 to 064: consequential handoff

Relationships and intimacy -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

013 to 065: consequential handoff

Relationships and intimacy -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

013 to 066: consequential handoff

Relationships and intimacy -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

013 to 067: consequential handoff

Relationships and intimacy -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

013 to 068: consequential handoff

Relationships and intimacy -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

013 to 069: consequential handoff

Relationships and intimacy -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

013 to 070: consequential handoff

Relationships and intimacy -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

013 to 071: consequential handoff

Relationships and intimacy -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

013 to 072: consequential handoff

Relationships and intimacy -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

013 to 073: consequential handoff

Relationships and intimacy -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

013 to 074: consequential handoff

Relationships and intimacy -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

013 to 075: consequential handoff

Relationships and intimacy -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

013 to 076: consequential handoff

Relationships and intimacy -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

013 to 077: consequential handoff

Relationships and intimacy -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

013 to 078: consequential handoff

Relationships and intimacy -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

013 to 079: consequential handoff

Relationships and intimacy -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

013 to 080: consequential handoff

Relationships and intimacy -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

013 to 081: consequential handoff

Relationships and intimacy -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

013 to 082: consequential handoff

Relationships and intimacy -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

013 to 083: consequential handoff

Relationships and intimacy -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

013 to 084: consequential handoff

Relationships and intimacy -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

013 to 085: consequential handoff

Relationships and intimacy -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

013 to 086: consequential handoff

Relationships and intimacy -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

013 to 087: consequential handoff

Relationships and intimacy -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

013 to 088: consequential handoff

Relationships and intimacy -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

013 to 089: consequential handoff

Relationships and intimacy -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

013 to 090: consequential handoff

Relationships and intimacy -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

013 to 091: consequential handoff

Relationships and intimacy -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

013 to 092: consequential handoff

Relationships and intimacy -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

013 to 093: consequential handoff

Relationships and intimacy -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

013 to 094: consequential handoff

Relationships and intimacy -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

013 to 095: consequential handoff

Relationships and intimacy -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

013 to 096: consequential handoff

Relationships and intimacy -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

013 to 097: consequential handoff

Relationships and intimacy -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

013 to 098: consequential handoff

Relationships and intimacy -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

013 to 099: consequential handoff

Relationships and intimacy -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

013 to 100: consequential handoff

Relationships and intimacy -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

013 to 101: consequential handoff

Relationships and intimacy -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

013 to 102: consequential handoff

Relationships and intimacy -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

013 to 103: consequential handoff

Relationships and intimacy -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

013 to 104: consequential handoff

Relationships and intimacy -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

013 to 105: consequential handoff

Relationships and intimacy -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

013 to 106: consequential handoff

Relationships and intimacy -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

013 to 107: consequential handoff

Relationships and intimacy -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

013 to 108: consequential handoff

Relationships and intimacy -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

013 to 109: consequential handoff

Relationships and intimacy -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

013 to 110: consequential handoff

Relationships and intimacy -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

013 to 111: consequential handoff

Relationships and intimacy -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

013 to 112: consequential handoff

Relationships and intimacy -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

013 to 113: consequential handoff

Relationships and intimacy -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

013 to 114: consequential handoff

Relationships and intimacy -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

013 to 115: consequential handoff

Relationships and intimacy -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

013 to 116: consequential handoff

Relationships and intimacy -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

013 to 117: consequential handoff

Relationships and intimacy -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

013 to 118: consequential handoff

Relationships and intimacy -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

013 to 119: consequential handoff

Relationships and intimacy -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

013 to 120: consequential handoff

Relationships and intimacy -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Relationships and intimacy into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Relationship status or personality label. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Partners and wider support network. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Reciprocal state and burden ledger plus consent architecture. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Dyadic longitudinal study' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 136-142 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

013: Relationships and intimacy

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Dyadic longitudinal study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026).

013: Relationships and intimacy

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Dyadic longitudinal study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Dyadic longitudinal study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

013: Relationships and intimacy

Household / family / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

013: Relationships and intimacy

Household / family / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

013: Relationships and intimacy

School / university / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

013: Relationships and intimacy

Healthcare / care team / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Healthcare / care team. handoff links treatment, safety, continuity, caregiving and costs. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Dyadic longitudinal study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026).

013: Relationships and intimacy

Healthcare / care team / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Healthcare / care team. handoff links treatment, safety, continuity, caregiving and costs. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

013: Relationships and intimacy

Local government / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

013: Relationships and intimacy

Local government / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Dyadic longitudinal study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

013: Relationships and intimacy

Scientific laboratory / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Dyadic longitudinal study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

013: Relationships and intimacy

Public infrastructure / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Dyadic longitudinal study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

013: Relationships and intimacy

Public infrastructure / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

013: Relationships and intimacy

Public infrastructure / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Relationships and intimacy is described in the Atlas as: Needs, boundaries, consent, trust, history, resources and reciprocity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

One partner compensates for unspoken constraints. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

One partner compensates for unspoken constraints. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Partners and wider support network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Reciprocal state and burden ledger plus consent architecture. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Safety, intimacy, autonomy and fairness improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Dyadic longitudinal study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026).

013: Evidence and source reconstruction

Relationships and intimacy | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 013: Relationships and intimacy; original author status: Constructive protocol. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Relationship status or personality label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: One partner compensates for unspoken constraints. The relevant receiving carriers are: Partners and wider support network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Reciprocal state and burden ledger plus consent architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Safety, intimacy, autonomy and fairness improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Dyadic longitudinal study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026).

013: Boundary divergence

Relationships and intimacy | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 013: Relationships and intimacy; original author status: Constructive protocol. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Relationship status or personality label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: One partner compensates for unspoken constraints. The relevant receiving carriers are: Partners and wider support network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Reciprocal state and burden ledger plus consent architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Safety, intimacy, autonomy and fairness improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Dyadic longitudinal study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026).

013: Causal diagram and identifiability

Relationships and intimacy | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 013: Relationships and intimacy; original author status: Constructive protocol. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Relationship status or personality label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: One partner compensates for unspoken constraints. The relevant receiving carriers are: Partners and wider support network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Reciprocal state and burden ledger plus consent architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Safety, intimacy, autonomy and fairness improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Dyadic longitudinal study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026).

013: Receiving carrier identification

Relationships and intimacy | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 013: Relationships and intimacy; original author status: Constructive protocol. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Relationship status or personality label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: One partner compensates for unspoken constraints. The relevant receiving carriers are: Partners and wider support network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Reciprocal state and burden ledger plus consent architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Safety, intimacy, autonomy and fairness improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Dyadic longitudinal study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

013: Cross-domain invariant contest

Relationships and intimacy | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 013: Relationships and intimacy; original author status: Constructive protocol. Native state: Needs, boundaries, consent, trust, history, resources and reciprocity.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Relationship status or personality label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: One partner compensates for unspoken constraints. The relevant receiving carriers are: Partners and wider support network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Reciprocal state and burden ledger plus consent architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Safety, intimacy, autonomy and fairness improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Dyadic longitudinal study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 013, pp. 136-142 (Rufino 2026).

Adapter 014: Parenting and child development

Psychology and meaning | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Biology, attachment, education, safety, resources, environment and agency

RECORDED RECEIVING SCHEMA

Age norm, grade or behavior label

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Child or parent compensates for missing support. Candidate receivers: Child, parent, school, community.

EXISTING CAPACITY DESIGN

Developmental state map plus distributed support capacity

PROTECTED OUTCOME STATED BY THE AUTHOR

Child capability and wellbeing rise while caregiver burden falls

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Longitudinal family-school cohort. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026).

014 | Parenting and child development

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

014 | Parenting and child development

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

014 | Parenting and child development

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

014 | Parenting and child development

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

014 | Parenting and child development

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

014 | Parenting and child development

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 014, Parenting and child development. Native state: Biology, attachment, education, safety, resources, environment and agency. Potential direct or institutional human pathway: Parenting and child development interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Child or parent compensates for missing support.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Developmental state map plus distributed support capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Child capability and wellbeing rise while caregiver burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

014 to 002: consequential handoff

Parenting and child development -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

014 to 003: consequential handoff

Parenting and child development -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

014 to 004: consequential handoff

Parenting and child development -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

014 to 005: consequential handoff

Parenting and child development -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

014 to 006: consequential handoff

Parenting and child development -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

014 to 007: consequential handoff

Parenting and child development -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

014 to 008: consequential handoff

Parenting and child development -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

014 to 009: consequential handoff

Parenting and child development -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

014 to 010: consequential handoff

Parenting and child development -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

014 to 011: consequential handoff

Parenting and child development -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

014 to 012: consequential handoff

Parenting and child development -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

014 to 013: consequential handoff

Parenting and child development -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

014 to 014: consequential handoff

Parenting and child development -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Parenting and child development becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 143-149; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

014 to 015: consequential handoff

Parenting and child development -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

014 to 016: consequential handoff

Parenting and child development -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

014 to 017: consequential handoff

Parenting and child development -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

014 to 018: consequential handoff

Parenting and child development -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

014 to 019: consequential handoff

Parenting and child development -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

014 to 020: consequential handoff

Parenting and child development -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

014 to 021: consequential handoff

Parenting and child development -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

014 to 022: consequential handoff

Parenting and child development -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

014 to 023: consequential handoff

Parenting and child development -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

014 to 024: consequential handoff

Parenting and child development -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

014 to 025: consequential handoff

Parenting and child development -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

014 to 026: consequential handoff

Parenting and child development -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

014 to 027: consequential handoff

Parenting and child development -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

014 to 028: consequential handoff

Parenting and child development -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

014 to 029: consequential handoff

Parenting and child development -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

014 to 030: consequential handoff

Parenting and child development -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

014 to 031: consequential handoff

Parenting and child development -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

014 to 032: consequential handoff

Parenting and child development -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

014 to 033: consequential handoff

Parenting and child development -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

014 to 034: consequential handoff

Parenting and child development -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

014 to 035: consequential handoff

Parenting and child development -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

014 to 036: consequential handoff

Parenting and child development -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

014 to 037: consequential handoff

Parenting and child development -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

014 to 038: consequential handoff

Parenting and child development -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

014 to 039: consequential handoff

Parenting and child development -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

014 to 040: consequential handoff

Parenting and child development -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

014 to 041: consequential handoff

Parenting and child development -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

014 to 042: consequential handoff

Parenting and child development -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

014 to 043: consequential handoff

Parenting and child development -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

014 to 044: consequential handoff

Parenting and child development -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

014 to 045: consequential handoff

Parenting and child development -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

014 to 046: consequential handoff

Parenting and child development -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

014 to 047: consequential handoff

Parenting and child development -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

014 to 048: consequential handoff

Parenting and child development -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

014 to 049: consequential handoff

Parenting and child development -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

014 to 050: consequential handoff

Parenting and child development -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

014 to 051: consequential handoff

Parenting and child development -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

014 to 052: consequential handoff

Parenting and child development -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

014 to 053: consequential handoff

Parenting and child development -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

014 to 054: consequential handoff

Parenting and child development -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

014 to 055: consequential handoff

Parenting and child development -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

014 to 056: consequential handoff

Parenting and child development -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

014 to 057: consequential handoff

Parenting and child development -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

014 to 058: consequential handoff

Parenting and child development -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

014 to 059: consequential handoff

Parenting and child development -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

014 to 060: consequential handoff

Parenting and child development -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

014 to 061: consequential handoff

Parenting and child development -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

014 to 062: consequential handoff

Parenting and child development -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

014 to 063: consequential handoff

Parenting and child development -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

014 to 064: consequential handoff

Parenting and child development -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

014 to 065: consequential handoff

Parenting and child development -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

014 to 066: consequential handoff

Parenting and child development -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

014 to 067: consequential handoff

Parenting and child development -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

014 to 068: consequential handoff

Parenting and child development -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

014 to 069: consequential handoff

Parenting and child development -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

014 to 070: consequential handoff

Parenting and child development -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

014 to 071: consequential handoff

Parenting and child development -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

014 to 072: consequential handoff

Parenting and child development -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

014 to 073: consequential handoff

Parenting and child development -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

014 to 074: consequential handoff

Parenting and child development -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

014 to 075: consequential handoff

Parenting and child development -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

014 to 076: consequential handoff

Parenting and child development -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

014 to 077: consequential handoff

Parenting and child development -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

014 to 078: consequential handoff

Parenting and child development -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

014 to 079: consequential handoff

Parenting and child development -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

014 to 080: consequential handoff

Parenting and child development -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

014 to 081: consequential handoff

Parenting and child development -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

014 to 082: consequential handoff

Parenting and child development -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

014 to 083: consequential handoff

Parenting and child development -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

014 to 084: consequential handoff

Parenting and child development -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

014 to 085: consequential handoff

Parenting and child development -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

014 to 086: consequential handoff

Parenting and child development -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

014 to 087: consequential handoff

Parenting and child development -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

014 to 088: consequential handoff

Parenting and child development -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

014 to 089: consequential handoff

Parenting and child development -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

014 to 090: consequential handoff

Parenting and child development -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

014 to 091: consequential handoff

Parenting and child development -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

014 to 092: consequential handoff

Parenting and child development -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

014 to 093: consequential handoff

Parenting and child development -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

014 to 094: consequential handoff

Parenting and child development -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

014 to 095: consequential handoff

Parenting and child development -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

014 to 096: consequential handoff

Parenting and child development -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

014 to 097: consequential handoff

Parenting and child development -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

014 to 098: consequential handoff

Parenting and child development -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

014 to 099: consequential handoff

Parenting and child development -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

014 to 100: consequential handoff

Parenting and child development -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

014 to 101: consequential handoff

Parenting and child development -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

014 to 102: consequential handoff

Parenting and child development -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

014 to 103: consequential handoff

Parenting and child development -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

014 to 104: consequential handoff

Parenting and child development -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

014 to 105: consequential handoff

Parenting and child development -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

014 to 106: consequential handoff

Parenting and child development -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

014 to 107: consequential handoff

Parenting and child development -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

014 to 108: consequential handoff

Parenting and child development -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

014 to 109: consequential handoff

Parenting and child development -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

014 to 110: consequential handoff

Parenting and child development -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

014 to 111: consequential handoff

Parenting and child development -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

014 to 112: consequential handoff

Parenting and child development -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

014 to 113: consequential handoff

Parenting and child development -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

014 to 114: consequential handoff

Parenting and child development -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

014 to 115: consequential handoff

Parenting and child development -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

014 to 116: consequential handoff

Parenting and child development -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

014 to 117: consequential handoff

Parenting and child development -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

014 to 118: consequential handoff

Parenting and child development -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

014 to 119: consequential handoff

Parenting and child development -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

014 to 120: consequential handoff

Parenting and child development -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Parenting and child development into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Age norm, grade or behavior label. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Child, parent, school, community. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Developmental state map plus distributed support capacity. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal family-school cohort' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 143-149 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

014: Parenting and child development

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026).

014: Parenting and child development

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Household / family / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

014: Parenting and child development

School / university / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

014: Parenting and child development

Local government / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

014: Parenting and child development

Local government / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

014: Parenting and child development

Ecological catchment / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

014: Parenting and child development

Ecological catchment / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

014: Parenting and child development

Ecological catchment / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

014: Parenting and child development

Ecological catchment / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

014: Parenting and child development

Public infrastructure / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

014: Parenting and child development

Digital / AI service / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal family-school cohort or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

014: Parenting and child development

Digital / AI service / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

014: Parenting and child development

Digital / AI service / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Parenting and child development is described in the Atlas as: Biology, attachment, education, safety, resources, environment and agency. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Child or parent compensates for missing support. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Child, parent, school, community. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Developmental state map plus distributed support capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Child capability and wellbeing rise while caregiver burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

014: Evidence and source reconstruction

Parenting and child development | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026).

014: Boundary divergence

Parenting and child development | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

014: Receiving carrier identification

Parenting and child development | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

Parenting and child development | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026).

014: Intervention design

Parenting and child development | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

014: Incumbent parity contest

Parenting and child development | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026).

014: Time-window and recurrence

Parenting and child development | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

014: Ethical and legal safety

Parenting and child development | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026).

014: Sensitivity and negative controls

Parenting and child development | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026).

014: Replication and provenance

Parenting and child development | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026).

014: Cross-domain invariant contest

Parenting and child development | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 014: Parenting and child development; original author status: Constructive protocol. Native state: Biology, attachment, education, safety, resources, environment and agency.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Age norm, grade or behavior label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Child or parent compensates for missing support. The relevant receiving carriers are: Child, parent, school, community.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Developmental state map plus distributed support capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Child capability and wellbeing rise while caregiver burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal family-school cohort. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 014, pp. 143-149 (Rufino 2026).

Adapter 015: Purpose and self-actualization

Psychology and meaning | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Capabilities, values, opportunity, health, autonomy and social contribution

RECORDED RECEIVING SCHEMA

Career status, wealth or productivity proxy

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Achievement can be purchased with health or belonging. Candidate receivers: Person, relationships, community.

EXISTING CAPACITY DESIGN

Whole-person capability architecture and burden guardrails

PROTECTED OUTCOME STATED BY THE AUTHOR

Achievement, health, autonomy and contribution improve together

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Longitudinal multidimensional evaluation. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026).

015 | Purpose and self-actualization

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 015, Purpose and self-actualization. Native state: Capabilities, values, opportunity, health, autonomy and social contribution. Potential direct or institutional human pathway: Purpose and self-actualization interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Achievement can be purchased with health or belonging.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-person capability architecture and burden guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Achievement, health, autonomy and contribution improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

015 | Purpose and self-actualization

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 015, Purpose and self-actualization. Native state: Capabilities, values, opportunity, health, autonomy and social contribution. Potential direct or institutional human pathway: Purpose and self-actualization interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Achievement can be purchased with health or belonging.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-person capability architecture and burden guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Achievement, health, autonomy and contribution improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

015 | Purpose and self-actualization

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 015, Purpose and self-actualization. Native state: Capabilities, values, opportunity, health, autonomy and social contribution. Potential direct or institutional human pathway: Purpose and self-actualization interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Achievement can be purchased with health or belonging.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-person capability architecture and burden guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Achievement, health, autonomy and contribution improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

015 | Purpose and self-actualization

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 015, Purpose and self-actualization. Native state: Capabilities, values, opportunity, health, autonomy and social contribution. Potential direct or institutional human pathway: Purpose and self-actualization interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Achievement can be purchased with health or belonging.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-person capability architecture and burden guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Achievement, health, autonomy and contribution improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

015 | Purpose and self-actualization

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 015, Purpose and self-actualization. Native state: Capabilities, values, opportunity, health, autonomy and social contribution. Potential direct or institutional human pathway: Purpose and self-actualization interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Achievement can be purchased with health or belonging.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-person capability architecture and burden guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Achievement, health, autonomy and contribution improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

015 | Purpose and self-actualization

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 015, Purpose and self-actualization. Native state: Capabilities, values, opportunity, health, autonomy and social contribution. Potential direct or institutional human pathway: Purpose and self-actualization interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Achievement can be purchased with health or belonging.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Whole-person capability architecture and burden guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Achievement, health, autonomy and contribution improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

015 to 001: consequential handoff

Purpose and self-actualization -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

015 to 002: consequential handoff

Purpose and self-actualization -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

015 to 003: consequential handoff

Purpose and self-actualization -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

015 to 004: consequential handoff

Purpose and self-actualization -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

015 to 005: consequential handoff

Purpose and self-actualization -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

015 to 006: consequential handoff

Purpose and self-actualization -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

015 to 007: consequential handoff

Purpose and self-actualization -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

015 to 008: consequential handoff

Purpose and self-actualization -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

015 to 009: consequential handoff

Purpose and self-actualization -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

015 to 010: consequential handoff

Purpose and self-actualization -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

015 to 011: consequential handoff

Purpose and self-actualization -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

015 to 012: consequential handoff

Purpose and self-actualization -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

015 to 013: consequential handoff

Purpose and self-actualization -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

015 to 014: consequential handoff

Purpose and self-actualization -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

015 to 015: consequential handoff

Purpose and self-actualization -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Purpose and self-actualization becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 150-156; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

015 to 016: consequential handoff

Purpose and self-actualization -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

015 to 017: consequential handoff

Purpose and self-actualization -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

015 to 018: consequential handoff

Purpose and self-actualization -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

015 to 019: consequential handoff

Purpose and self-actualization -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

015 to 020: consequential handoff

Purpose and self-actualization -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

015 to 021: consequential handoff

Purpose and self-actualization -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

015 to 022: consequential handoff

Purpose and self-actualization -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

015 to 023: consequential handoff

Purpose and self-actualization -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

015 to 024: consequential handoff

Purpose and self-actualization -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

015 to 025: consequential handoff

Purpose and self-actualization -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

015 to 026: consequential handoff

Purpose and self-actualization -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

015 to 027: consequential handoff

Purpose and self-actualization -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

015 to 028: consequential handoff

Purpose and self-actualization -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

015 to 029: consequential handoff

Purpose and self-actualization -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

015 to 030: consequential handoff

Purpose and self-actualization -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

015 to 031: consequential handoff

Purpose and self-actualization -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

015 to 032: consequential handoff

Purpose and self-actualization -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

015 to 033: consequential handoff

Purpose and self-actualization -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

015 to 034: consequential handoff

Purpose and self-actualization -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

015 to 035: consequential handoff

Purpose and self-actualization -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

015 to 036: consequential handoff

Purpose and self-actualization -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

015 to 037: consequential handoff

Purpose and self-actualization -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

015 to 038: consequential handoff

Purpose and self-actualization -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

015 to 039: consequential handoff

Purpose and self-actualization -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

015 to 040: consequential handoff

Purpose and self-actualization -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

015 to 041: consequential handoff

Purpose and self-actualization -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

015 to 042: consequential handoff

Purpose and self-actualization -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

015 to 043: consequential handoff

Purpose and self-actualization -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

015 to 044: consequential handoff

Purpose and self-actualization -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

015 to 045: consequential handoff

Purpose and self-actualization -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

015 to 046: consequential handoff

Purpose and self-actualization -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

015 to 047: consequential handoff

Purpose and self-actualization -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

015 to 048: consequential handoff

Purpose and self-actualization -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, relationships, community. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Whole-person capability architecture and burden guardrails. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal multidimensional evaluation' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 150-156 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 015, pp. 150-156 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

015 to 049: consequential handoff

Purpose and self-actualization -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Purpose and self-actualization into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Career status, wealth or productivity proxy. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?
