Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

090 to 019: consequential handoff

Pure mathematics and formal systems -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

090 to 020: consequential handoff

Pure mathematics and formal systems -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

090 to 021: consequential handoff

Pure mathematics and formal systems -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

090 to 022: consequential handoff

Pure mathematics and formal systems -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

090 to 023: consequential handoff

Pure mathematics and formal systems -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

090 to 024: consequential handoff

Pure mathematics and formal systems -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

090 to 025: consequential handoff

Pure mathematics and formal systems -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

090 to 026: consequential handoff

Pure mathematics and formal systems -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

090 to 027: consequential handoff

Pure mathematics and formal systems -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

090 to 028: consequential handoff

Pure mathematics and formal systems -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

090 to 029: consequential handoff

Pure mathematics and formal systems -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

090 to 030: consequential handoff

Pure mathematics and formal systems -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

090 to 031: consequential handoff

Pure mathematics and formal systems -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

090 to 032: consequential handoff

Pure mathematics and formal systems -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

090 to 033: consequential handoff

Pure mathematics and formal systems -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

090 to 034: consequential handoff

Pure mathematics and formal systems -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

090 to 035: consequential handoff

Pure mathematics and formal systems -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

090 to 036: consequential handoff

Pure mathematics and formal systems -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

090 to 037: consequential handoff

Pure mathematics and formal systems -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

090 to 038: consequential handoff

Pure mathematics and formal systems -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

090 to 039: consequential handoff

Pure mathematics and formal systems -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

090 to 040: consequential handoff

Pure mathematics and formal systems -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

090 to 041: consequential handoff

Pure mathematics and formal systems -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

090 to 042: consequential handoff

Pure mathematics and formal systems -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

090 to 043: consequential handoff

Pure mathematics and formal systems -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

090 to 044: consequential handoff

Pure mathematics and formal systems -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

090 to 045: consequential handoff

Pure mathematics and formal systems -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

090 to 046: consequential handoff

Pure mathematics and formal systems -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

090 to 047: consequential handoff

Pure mathematics and formal systems -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

090 to 048: consequential handoff

Pure mathematics and formal systems -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

090 to 049: consequential handoff

Pure mathematics and formal systems -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

090 to 050: consequential handoff

Pure mathematics and formal systems -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

090 to 051: consequential handoff

Pure mathematics and formal systems -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

090 to 052: consequential handoff

Pure mathematics and formal systems -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

090 to 053: consequential handoff

Pure mathematics and formal systems -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

090 to 054: consequential handoff

Pure mathematics and formal systems -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

090 to 055: consequential handoff

Pure mathematics and formal systems -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

090 to 056: consequential handoff

Pure mathematics and formal systems -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

090 to 057: consequential handoff

Pure mathematics and formal systems -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

090 to 058: consequential handoff

Pure mathematics and formal systems -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

090 to 059: consequential handoff

Pure mathematics and formal systems -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

090 to 060: consequential handoff

Pure mathematics and formal systems -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

090 to 061: consequential handoff

Pure mathematics and formal systems -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

090 to 062: consequential handoff

Pure mathematics and formal systems -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

090 to 063: consequential handoff

Pure mathematics and formal systems -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

090 to 064: consequential handoff

Pure mathematics and formal systems -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

090 to 065: consequential handoff

Pure mathematics and formal systems -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

090 to 066: consequential handoff

Pure mathematics and formal systems -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

090 to 067: consequential handoff

Pure mathematics and formal systems -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

090 to 068: consequential handoff

Pure mathematics and formal systems -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

090 to 069: consequential handoff

Pure mathematics and formal systems -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

090 to 070: consequential handoff

Pure mathematics and formal systems -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

090 to 071: consequential handoff

Pure mathematics and formal systems -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

090 to 072: consequential handoff

Pure mathematics and formal systems -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

090 to 073: consequential handoff

Pure mathematics and formal systems -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

090 to 074: consequential handoff

Pure mathematics and formal systems -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

090 to 075: consequential handoff

Pure mathematics and formal systems -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

090 to 076: consequential handoff

Pure mathematics and formal systems -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

090 to 077: consequential handoff

Pure mathematics and formal systems -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

090 to 078: consequential handoff

Pure mathematics and formal systems -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

090 to 079: consequential handoff

Pure mathematics and formal systems -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

090 to 080: consequential handoff

Pure mathematics and formal systems -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

090 to 081: consequential handoff

Pure mathematics and formal systems -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

090 to 082: consequential handoff

Pure mathematics and formal systems -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

090 to 083: consequential handoff

Pure mathematics and formal systems -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

090 to 084: consequential handoff

Pure mathematics and formal systems -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

090 to 085: consequential handoff

Pure mathematics and formal systems -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

090 to 086: consequential handoff

Pure mathematics and formal systems -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

090 to 087: consequential handoff

Pure mathematics and formal systems -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

090 to 088: consequential handoff

Pure mathematics and formal systems -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

090 to 089: consequential handoff

Pure mathematics and formal systems -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

090 to 090: consequential handoff

Pure mathematics and formal systems -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Pure mathematics and formal systems becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 682-688; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

090 to 091: consequential handoff

Pure mathematics and formal systems -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

090 to 092: consequential handoff

Pure mathematics and formal systems -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

090 to 093: consequential handoff

Pure mathematics and formal systems -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

090 to 094: consequential handoff

Pure mathematics and formal systems -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

090 to 095: consequential handoff

Pure mathematics and formal systems -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

090 to 096: consequential handoff

Pure mathematics and formal systems -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

090 to 097: consequential handoff

Pure mathematics and formal systems -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

090 to 098: consequential handoff

Pure mathematics and formal systems -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

090 to 099: consequential handoff

Pure mathematics and formal systems -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

090 to 100: consequential handoff

Pure mathematics and formal systems -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

090 to 101: consequential handoff

Pure mathematics and formal systems -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

090 to 102: consequential handoff

Pure mathematics and formal systems -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

090 to 103: consequential handoff

Pure mathematics and formal systems -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

090 to 104: consequential handoff

Pure mathematics and formal systems -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

090 to 105: consequential handoff

Pure mathematics and formal systems -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

090 to 106: consequential handoff

Pure mathematics and formal systems -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

090 to 107: consequential handoff

Pure mathematics and formal systems -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

090 to 108: consequential handoff

Pure mathematics and formal systems -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

090 to 109: consequential handoff

Pure mathematics and formal systems -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

090 to 110: consequential handoff

Pure mathematics and formal systems -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

090 to 111: consequential handoff

Pure mathematics and formal systems -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

090 to 112: consequential handoff

Pure mathematics and formal systems -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

090 to 113: consequential handoff

Pure mathematics and formal systems -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

090 to 114: consequential handoff

Pure mathematics and formal systems -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

090 to 115: consequential handoff

Pure mathematics and formal systems -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

090 to 116: consequential handoff

Pure mathematics and formal systems -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

090 to 117: consequential handoff

Pure mathematics and formal systems -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

090 to 118: consequential handoff

Pure mathematics and formal systems -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

090 to 119: consequential handoff

Pure mathematics and formal systems -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

090 to 120: consequential handoff

Pure mathematics and formal systems -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Pure mathematics and formal systems into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen signature/type system/quotient. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Proof system, translator, solver. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Minimal sufficient schema preserving required relations. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Machine-checked theorem suite' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 682-688 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

090: Pure mathematics and formal systems

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Pure mathematics and formal systems is described in the Atlas as: Objects, relations, axioms, language, proofs and translations. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Representation collapses distinctions or expands proof complexity. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Proof system, translator, solver. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Minimal sufficient schema preserving required relations. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while ambiguity and proof/representation cost fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Machine-checked theorem suite or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026).

090: Pure mathematics and formal systems

School / university / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Pure mathematics and formal systems is described in the Atlas as: Objects, relations, axioms, language, proofs and translations. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Representation collapses distinctions or expands proof complexity. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Proof system, translator, solver. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Minimal sufficient schema preserving required relations. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while ambiguity and proof/representation cost fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Machine-checked theorem suite or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Representation collapses distinctions or expands proof complexity. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Proof system, translator, solver. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Minimal sufficient schema preserving required relations. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while ambiguity and proof/representation cost fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Machine-checked theorem suite or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Local government / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Pure mathematics and formal systems is described in the Atlas as: Objects, relations, axioms, language, proofs and translations. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Representation collapses distinctions or expands proof complexity. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Proof system, translator, solver. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Minimal sufficient schema preserving required relations. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Pure mathematics and formal systems is described in the Atlas as: Objects, relations, axioms, language, proofs and translations. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Representation collapses distinctions or expands proof complexity. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Proof system, translator, solver. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Minimal sufficient schema preserving required relations. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while ambiguity and proof/representation cost fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Machine-checked theorem suite or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

090: Evidence and source reconstruction

Pure mathematics and formal systems | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Fidelity rises while ambiguity and proof/representation cost fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Machine-checked theorem suite. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026).

090: Boundary divergence

Pure mathematics and formal systems | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

090: Causal diagram and identifiability

Pure mathematics and formal systems | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

090: Receiving carrier identification

Pure mathematics and formal systems | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

090: Hidden compensation accounting

Pure mathematics and formal systems | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

090: Native units and dimensional integrity

Pure mathematics and formal systems | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Fidelity rises while ambiguity and proof/representation cost fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Machine-checked theorem suite. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

090: Capacity specification

Pure mathematics and formal systems | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Fidelity rises while ambiguity and proof/representation cost fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Machine-checked theorem suite. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026).

090: Intervention design

Pure mathematics and formal systems | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

090: Incumbent parity contest

Pure mathematics and formal systems | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

090: Cross-domain invariant contest

Pure mathematics and formal systems | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 090: Pure mathematics and formal systems; original author status: Formal frontier. Native state: Objects, relations, axioms, language, proofs and translations.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen signature/type system/quotient. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Representation collapses distinctions or expands proof complexity. The relevant receiving carriers are: Proof system, translator, solver.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Minimal sufficient schema preserving required relations. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Fidelity rises while ambiguity and proof/representation cost fall.

Candidate decisive method: Machine-checked theorem suite. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 090, pp. 682-688 (Rufino 2026).

Adapter 091: Statistics and causal inference

Frontier, illicit and cosmic | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Data-generating process, sampling, measurement, confounding and uncertainty

RECORDED RECEIVING SCHEMA

Chosen model/estimand

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Local fit hides transportability or selection bias. Candidate receivers: Decision makers, future samples, affected groups.

EXISTING CAPACITY DESIGN

Provenance-aware multi-model causal state + identifiability guardrails

PROTECTED OUTCOME STATED BY THE AUTHOR

Predictive/causal validity improves without hidden subgroup harm

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Simulation + multi-dataset benchmark. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026).

091 | Statistics and causal inference

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 091, Statistics and causal inference. Native state: Data-generating process, sampling, measurement, confounding and uncertainty. A human may be a researcher, operator, regulated party or downstream recipient of this Statistics and causal inference system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Local fit hides transportability or selection bias.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance-aware multi-model causal state + identifiability guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive/causal validity improves without hidden subgroup harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

091 | Statistics and causal inference

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 091, Statistics and causal inference. Native state: Data-generating process, sampling, measurement, confounding and uncertainty. A human may be a researcher, operator, regulated party or downstream recipient of this Statistics and causal inference system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Local fit hides transportability or selection bias.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance-aware multi-model causal state + identifiability guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive/causal validity improves without hidden subgroup harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

091 | Statistics and causal inference

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 091, Statistics and causal inference. Native state: Data-generating process, sampling, measurement, confounding and uncertainty. A human may be a researcher, operator, regulated party or downstream recipient of this Statistics and causal inference system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Local fit hides transportability or selection bias.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance-aware multi-model causal state + identifiability guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive/causal validity improves without hidden subgroup harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

091 | Statistics and causal inference

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 091, Statistics and causal inference. Native state: Data-generating process, sampling, measurement, confounding and uncertainty. A human may be a researcher, operator, regulated party or downstream recipient of this Statistics and causal inference system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Local fit hides transportability or selection bias.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance-aware multi-model causal state + identifiability guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive/causal validity improves without hidden subgroup harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

091 | Statistics and causal inference

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 091, Statistics and causal inference. Native state: Data-generating process, sampling, measurement, confounding and uncertainty. A human may be a researcher, operator, regulated party or downstream recipient of this Statistics and causal inference system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Local fit hides transportability or selection bias.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance-aware multi-model causal state + identifiability guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive/causal validity improves without hidden subgroup harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

091 | Statistics and causal inference

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 091, Statistics and causal inference. Native state: Data-generating process, sampling, measurement, confounding and uncertainty. A human may be a researcher, operator, regulated party or downstream recipient of this Statistics and causal inference system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Local fit hides transportability or selection bias.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Provenance-aware multi-model causal state + identifiability guardrails can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Predictive/causal validity improves without hidden subgroup harm. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

091 to 001: consequential handoff

Statistics and causal inference -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

091 to 002: consequential handoff

Statistics and causal inference -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

091 to 003: consequential handoff

Statistics and causal inference -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

091 to 004: consequential handoff

Statistics and causal inference -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

091 to 005: consequential handoff

Statistics and causal inference -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

091 to 006: consequential handoff

Statistics and causal inference -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

091 to 007: consequential handoff

Statistics and causal inference -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

091 to 008: consequential handoff

Statistics and causal inference -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

091 to 009: consequential handoff

Statistics and causal inference -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

091 to 010: consequential handoff

Statistics and causal inference -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

091 to 011: consequential handoff

Statistics and causal inference -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

091 to 012: consequential handoff

Statistics and causal inference -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

091 to 013: consequential handoff

Statistics and causal inference -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

091 to 014: consequential handoff

Statistics and causal inference -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

091 to 015: consequential handoff

Statistics and causal inference -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

091 to 016: consequential handoff

Statistics and causal inference -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

091 to 017: consequential handoff

Statistics and causal inference -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

091 to 018: consequential handoff

Statistics and causal inference -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

091 to 019: consequential handoff

Statistics and causal inference -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

091 to 020: consequential handoff

Statistics and causal inference -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

091 to 021: consequential handoff

Statistics and causal inference -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

091 to 022: consequential handoff

Statistics and causal inference -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

091 to 023: consequential handoff

Statistics and causal inference -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

091 to 024: consequential handoff

Statistics and causal inference -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

091 to 025: consequential handoff

Statistics and causal inference -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

091 to 026: consequential handoff

Statistics and causal inference -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

091 to 027: consequential handoff

Statistics and causal inference -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

091 to 028: consequential handoff

Statistics and causal inference -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

091 to 029: consequential handoff

Statistics and causal inference -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

091 to 030: consequential handoff

Statistics and causal inference -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

091 to 031: consequential handoff

Statistics and causal inference -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

091 to 032: consequential handoff

Statistics and causal inference -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

091 to 033: consequential handoff

Statistics and causal inference -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

091 to 034: consequential handoff

Statistics and causal inference -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

091 to 035: consequential handoff

Statistics and causal inference -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

091 to 036: consequential handoff

Statistics and causal inference -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

091 to 037: consequential handoff

Statistics and causal inference -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

091 to 038: consequential handoff

Statistics and causal inference -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

091 to 039: consequential handoff

Statistics and causal inference -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

091 to 040: consequential handoff

Statistics and causal inference -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

091 to 041: consequential handoff

Statistics and causal inference -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

091 to 042: consequential handoff

Statistics and causal inference -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

091 to 043: consequential handoff

Statistics and causal inference -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

091 to 044: consequential handoff

Statistics and causal inference -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

091 to 045: consequential handoff

Statistics and causal inference -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

091 to 046: consequential handoff

Statistics and causal inference -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

091 to 047: consequential handoff

Statistics and causal inference -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

091 to 048: consequential handoff

Statistics and causal inference -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

091 to 049: consequential handoff

Statistics and causal inference -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

091 to 050: consequential handoff

Statistics and causal inference -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

091 to 051: consequential handoff

Statistics and causal inference -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

091 to 052: consequential handoff

Statistics and causal inference -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

091 to 053: consequential handoff

Statistics and causal inference -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

091 to 054: consequential handoff

Statistics and causal inference -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

091 to 055: consequential handoff

Statistics and causal inference -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

091 to 056: consequential handoff

Statistics and causal inference -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

091 to 057: consequential handoff

Statistics and causal inference -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

091 to 058: consequential handoff

Statistics and causal inference -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

091 to 059: consequential handoff

Statistics and causal inference -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

091 to 060: consequential handoff

Statistics and causal inference -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

091 to 061: consequential handoff

Statistics and causal inference -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

091 to 062: consequential handoff

Statistics and causal inference -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

091 to 063: consequential handoff

Statistics and causal inference -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

091 to 064: consequential handoff

Statistics and causal inference -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

091 to 065: consequential handoff

Statistics and causal inference -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

091 to 066: consequential handoff

Statistics and causal inference -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

091 to 067: consequential handoff

Statistics and causal inference -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

091 to 068: consequential handoff

Statistics and causal inference -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

091 to 069: consequential handoff

Statistics and causal inference -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

091 to 070: consequential handoff

Statistics and causal inference -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

091 to 071: consequential handoff

Statistics and causal inference -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

091 to 072: consequential handoff

Statistics and causal inference -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

091 to 073: consequential handoff

Statistics and causal inference -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

091 to 074: consequential handoff

Statistics and causal inference -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

091 to 075: consequential handoff

Statistics and causal inference -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

091 to 076: consequential handoff

Statistics and causal inference -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

091 to 077: consequential handoff

Statistics and causal inference -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

091 to 078: consequential handoff

Statistics and causal inference -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

091 to 079: consequential handoff

Statistics and causal inference -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

091 to 080: consequential handoff

Statistics and causal inference -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

091 to 081: consequential handoff

Statistics and causal inference -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

091 to 082: consequential handoff

Statistics and causal inference -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

091 to 083: consequential handoff

Statistics and causal inference -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

091 to 084: consequential handoff

Statistics and causal inference -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

091 to 085: consequential handoff

Statistics and causal inference -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

091 to 086: consequential handoff

Statistics and causal inference -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

091 to 087: consequential handoff

Statistics and causal inference -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

091 to 088: consequential handoff

Statistics and causal inference -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

091 to 089: consequential handoff

Statistics and causal inference -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

091 to 090: consequential handoff

Statistics and causal inference -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

091 to 091: consequential handoff

Statistics and causal inference -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Statistics and causal inference becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 690-696; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

091 to 092: consequential handoff

Statistics and causal inference -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

091 to 093: consequential handoff

Statistics and causal inference -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

091 to 094: consequential handoff

Statistics and causal inference -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

091 to 095: consequential handoff

Statistics and causal inference -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

091 to 096: consequential handoff

Statistics and causal inference -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

091 to 097: consequential handoff

Statistics and causal inference -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

091 to 098: consequential handoff

Statistics and causal inference -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

091 to 099: consequential handoff

Statistics and causal inference -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

091 to 100: consequential handoff

Statistics and causal inference -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

091 to 101: consequential handoff

Statistics and causal inference -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

091 to 102: consequential handoff

Statistics and causal inference -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

091 to 103: consequential handoff

Statistics and causal inference -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

091 to 104: consequential handoff

Statistics and causal inference -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

091 to 105: consequential handoff

Statistics and causal inference -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

091 to 106: consequential handoff

Statistics and causal inference -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

091 to 107: consequential handoff

Statistics and causal inference -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

091 to 108: consequential handoff

Statistics and causal inference -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

091 to 109: consequential handoff

Statistics and causal inference -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

091 to 110: consequential handoff

Statistics and causal inference -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

091 to 111: consequential handoff

Statistics and causal inference -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

091 to 112: consequential handoff

Statistics and causal inference -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

091 to 113: consequential handoff

Statistics and causal inference -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

091 to 114: consequential handoff

Statistics and causal inference -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

091 to 115: consequential handoff

Statistics and causal inference -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

091 to 116: consequential handoff

Statistics and causal inference -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

091 to 117: consequential handoff

Statistics and causal inference -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

091 to 118: consequential handoff

Statistics and causal inference -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

091 to 119: consequential handoff

Statistics and causal inference -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

091 to 120: consequential handoff

Statistics and causal inference -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Statistics and causal inference into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Chosen model/estimand. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision makers, future samples, affected groups. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Provenance-aware multi-model causal state + identifiability guardrails. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Simulation + multi-dataset benchmark' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 690-696 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

091: Statistics and causal inference

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Statistics and causal inference is described in the Atlas as: Data-generating process, sampling, measurement, confounding and uncertainty. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Local fit hides transportability or selection bias. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision makers, future samples, affected groups. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Provenance-aware multi-model causal state + identifiability guardrails. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Predictive/causal validity improves without hidden subgroup harm. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Simulation + multi-dataset benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026).

091: Statistics and causal inference

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Statistics and causal inference is described in the Atlas as: Data-generating process, sampling, measurement, confounding and uncertainty. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Local fit hides transportability or selection bias. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision makers, future samples, affected groups. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Provenance-aware multi-model causal state + identifiability guardrails. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Predictive/causal validity improves without hidden subgroup harm. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Simulation + multi-dataset benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

091: Statistics and causal inference

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Statistics and causal inference is described in the Atlas as: Data-generating process, sampling, measurement, confounding and uncertainty. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Local fit hides transportability or selection bias. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision makers, future samples, affected groups. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Provenance-aware multi-model causal state + identifiability guardrails. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Predictive/causal validity improves without hidden subgroup harm. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

091: Statistics and causal inference

Enterprise / cooperative / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Enterprise / cooperative. handoff links throughput, workers, buyers, capital and governance. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Statistics and causal inference is described in the Atlas as: Data-generating process, sampling, measurement, confounding and uncertainty. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Local fit hides transportability or selection bias. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision makers, future samples, affected groups. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Provenance-aware multi-model causal state + identifiability guardrails. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Predictive/causal validity improves without hidden subgroup harm. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Simulation + multi-dataset benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026).

091: Statistics and causal inference

Enterprise / cooperative / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Enterprise / cooperative. handoff links throughput, workers, buyers, capital and governance. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Statistics and causal inference is described in the Atlas as: Data-generating process, sampling, measurement, confounding and uncertainty. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Local fit hides transportability or selection bias. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision makers, future samples, affected groups. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Provenance-aware multi-model causal state + identifiability guardrails. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Statistics and causal inference is described in the Atlas as: Data-generating process, sampling, measurement, confounding and uncertainty. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Local fit hides transportability or selection bias. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision makers, future samples, affected groups. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Provenance-aware multi-model causal state + identifiability guardrails. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Predictive/causal validity improves without hidden subgroup harm. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Simulation + multi-dataset benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Local fit hides transportability or selection bias. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision makers, future samples, affected groups. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Provenance-aware multi-model causal state + identifiability guardrails. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Predictive/causal validity improves without hidden subgroup harm. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Simulation + multi-dataset benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

091: Statistics and causal inference

Digital / AI service / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Statistics and causal inference is described in the Atlas as: Data-generating process, sampling, measurement, confounding and uncertainty. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Local fit hides transportability or selection bias. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision makers, future samples, affected groups. Identify pathways and hidden compensation using credible data rather than narrative fit.

091: Evidence and source reconstruction

Statistics and causal inference | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Predictive/causal validity improves without hidden subgroup harm.

RETEST AND SCOPE CONTROL

Candidate decisive method: Simulation + multi-dataset benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026).

091: Boundary divergence

Statistics and causal inference | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

091: Receiving carrier identification

Statistics and causal inference | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

091: Hidden compensation accounting

Statistics and causal inference | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026).

091: Native units and dimensional integrity

Statistics and causal inference | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

091: Capacity specification

Statistics and causal inference | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

Candidate decisive method: Simulation + multi-dataset benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026).

091: Time-window and recurrence

Statistics and causal inference | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Predictive/causal validity improves without hidden subgroup harm.

RETEST AND SCOPE CONTROL

Candidate decisive method: Simulation + multi-dataset benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 091, pp. 690-696 (Rufino 2026).

091: Ethical and legal safety

Statistics and causal inference | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

091: Sensitivity and negative controls

Statistics and causal inference | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

091: Cross-domain invariant contest

Statistics and causal inference | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 091: Statistics and causal inference; original author status: Strong structural fit. Native state: Data-generating process, sampling, measurement, confounding and uncertainty.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Chosen model/estimand. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Local fit hides transportability or selection bias. The relevant receiving carriers are: Decision makers, future samples, affected groups.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Provenance-aware multi-model causal state + identifiability guardrails. Show a feasible native action rather than restating a goal.

Adapter 092: Logic and reasoning systems

Frontier, illicit and cosmic | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Premises, inference rules, contradictions, uncertainty and goals

RECORDED RECEIVING SCHEMA

Single logical calculus

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Consistency in one calculus loses expressivity/context elsewhere. Candidate receivers: Reasoner, downstream decision.

EXISTING CAPACITY DESIGN

Multi-logic translation + contradiction provenance

PROTECTED OUTCOME STATED BY THE AUTHOR

Validity, expressivity and computational tractability improve

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Formal benchmark. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092 | Logic and reasoning systems

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 092, Logic and reasoning systems. Native state: Premises, inference rules, contradictions, uncertainty and goals. A human may be a researcher, operator, regulated party or downstream recipient of this Logic and reasoning systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Consistency in one calculus loses expressivity/context elsewhere.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-logic translation + contradiction provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Validity, expressivity and computational tractability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

092 | Logic and reasoning systems

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 092, Logic and reasoning systems. Native state: Premises, inference rules, contradictions, uncertainty and goals. A human may be a researcher, operator, regulated party or downstream recipient of this Logic and reasoning systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Consistency in one calculus loses expressivity/context elsewhere.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-logic translation + contradiction provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Validity, expressivity and computational tractability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

092 | Logic and reasoning systems

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 092, Logic and reasoning systems. Native state: Premises, inference rules, contradictions, uncertainty and goals. A human may be a researcher, operator, regulated party or downstream recipient of this Logic and reasoning systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Consistency in one calculus loses expressivity/context elsewhere.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-logic translation + contradiction provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Validity, expressivity and computational tractability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

092 | Logic and reasoning systems

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 092, Logic and reasoning systems. Native state: Premises, inference rules, contradictions, uncertainty and goals. A human may be a researcher, operator, regulated party or downstream recipient of this Logic and reasoning systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Consistency in one calculus loses expressivity/context elsewhere.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-logic translation + contradiction provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Validity, expressivity and computational tractability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

092 | Logic and reasoning systems

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 092, Logic and reasoning systems. Native state: Premises, inference rules, contradictions, uncertainty and goals. A human may be a researcher, operator, regulated party or downstream recipient of this Logic and reasoning systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Consistency in one calculus loses expressivity/context elsewhere.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-logic translation + contradiction provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Validity, expressivity and computational tractability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

092 | Logic and reasoning systems

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 092, Logic and reasoning systems. Native state: Premises, inference rules, contradictions, uncertainty and goals. A human may be a researcher, operator, regulated party or downstream recipient of this Logic and reasoning systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Consistency in one calculus loses expressivity/context elsewhere.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Multi-logic translation + contradiction provenance can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Validity, expressivity and computational tractability improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

092 to 001: consequential handoff

Logic and reasoning systems -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

092 to 002: consequential handoff

Logic and reasoning systems -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

092 to 003: consequential handoff

Logic and reasoning systems -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

092 to 004: consequential handoff

Logic and reasoning systems -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

092 to 005: consequential handoff

Logic and reasoning systems -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

092 to 006: consequential handoff

Logic and reasoning systems -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

092 to 007: consequential handoff

Logic and reasoning systems -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

092 to 008: consequential handoff

Logic and reasoning systems -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

092 to 009: consequential handoff

Logic and reasoning systems -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

092 to 010: consequential handoff

Logic and reasoning systems -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

092 to 011: consequential handoff

Logic and reasoning systems -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

092 to 012: consequential handoff

Logic and reasoning systems -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

092 to 013: consequential handoff

Logic and reasoning systems -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

092 to 014: consequential handoff

Logic and reasoning systems -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

092 to 015: consequential handoff

Logic and reasoning systems -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

092 to 016: consequential handoff

Logic and reasoning systems -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

092 to 017: consequential handoff

Logic and reasoning systems -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

092 to 018: consequential handoff

Logic and reasoning systems -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

092 to 019: consequential handoff

Logic and reasoning systems -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

092 to 020: consequential handoff

Logic and reasoning systems -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

092 to 021: consequential handoff

Logic and reasoning systems -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

092 to 022: consequential handoff

Logic and reasoning systems -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

092 to 023: consequential handoff

Logic and reasoning systems -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

092 to 024: consequential handoff

Logic and reasoning systems -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

092 to 025: consequential handoff

Logic and reasoning systems -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

092 to 026: consequential handoff

Logic and reasoning systems -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

092 to 027: consequential handoff

Logic and reasoning systems -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

092 to 028: consequential handoff

Logic and reasoning systems -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

092 to 029: consequential handoff

Logic and reasoning systems -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

092 to 030: consequential handoff

Logic and reasoning systems -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

092 to 031: consequential handoff

Logic and reasoning systems -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

092 to 032: consequential handoff

Logic and reasoning systems -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

092 to 033: consequential handoff

Logic and reasoning systems -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

092 to 034: consequential handoff

Logic and reasoning systems -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

092 to 035: consequential handoff

Logic and reasoning systems -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

092 to 036: consequential handoff

Logic and reasoning systems -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

092 to 037: consequential handoff

Logic and reasoning systems -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

092 to 038: consequential handoff

Logic and reasoning systems -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

092 to 039: consequential handoff

Logic and reasoning systems -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

092 to 040: consequential handoff

Logic and reasoning systems -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

092 to 041: consequential handoff

Logic and reasoning systems -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

092 to 042: consequential handoff

Logic and reasoning systems -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

092 to 043: consequential handoff

Logic and reasoning systems -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

092 to 044: consequential handoff

Logic and reasoning systems -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

092 to 045: consequential handoff

Logic and reasoning systems -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

092 to 046: consequential handoff

Logic and reasoning systems -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

092 to 047: consequential handoff

Logic and reasoning systems -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

092 to 048: consequential handoff

Logic and reasoning systems -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

092 to 049: consequential handoff

Logic and reasoning systems -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

092 to 050: consequential handoff

Logic and reasoning systems -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

092 to 051: consequential handoff

Logic and reasoning systems -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

092 to 052: consequential handoff

Logic and reasoning systems -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

092 to 053: consequential handoff

Logic and reasoning systems -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

092 to 054: consequential handoff

Logic and reasoning systems -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

092 to 055: consequential handoff

Logic and reasoning systems -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

092 to 056: consequential handoff

Logic and reasoning systems -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

092 to 057: consequential handoff

Logic and reasoning systems -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

092 to 058: consequential handoff

Logic and reasoning systems -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

092 to 059: consequential handoff

Logic and reasoning systems -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

092 to 060: consequential handoff

Logic and reasoning systems -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

092 to 061: consequential handoff

Logic and reasoning systems -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

092 to 062: consequential handoff

Logic and reasoning systems -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

092 to 063: consequential handoff

Logic and reasoning systems -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

092 to 064: consequential handoff

Logic and reasoning systems -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

092 to 065: consequential handoff

Logic and reasoning systems -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

092 to 066: consequential handoff

Logic and reasoning systems -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

092 to 067: consequential handoff

Logic and reasoning systems -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

092 to 068: consequential handoff

Logic and reasoning systems -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

092 to 069: consequential handoff

Logic and reasoning systems -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

092 to 070: consequential handoff

Logic and reasoning systems -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

092 to 071: consequential handoff

Logic and reasoning systems -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

092 to 072: consequential handoff

Logic and reasoning systems -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

092 to 073: consequential handoff

Logic and reasoning systems -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

092 to 074: consequential handoff

Logic and reasoning systems -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

092 to 075: consequential handoff

Logic and reasoning systems -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

092 to 076: consequential handoff

Logic and reasoning systems -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

092 to 077: consequential handoff

Logic and reasoning systems -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

092 to 078: consequential handoff

Logic and reasoning systems -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

092 to 079: consequential handoff

Logic and reasoning systems -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

092 to 080: consequential handoff

Logic and reasoning systems -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

092 to 081: consequential handoff

Logic and reasoning systems -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

092 to 082: consequential handoff

Logic and reasoning systems -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

092 to 083: consequential handoff

Logic and reasoning systems -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

092 to 084: consequential handoff

Logic and reasoning systems -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

092 to 085: consequential handoff

Logic and reasoning systems -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

092 to 086: consequential handoff

Logic and reasoning systems -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

092 to 087: consequential handoff

Logic and reasoning systems -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

092 to 088: consequential handoff

Logic and reasoning systems -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

092 to 089: consequential handoff

Logic and reasoning systems -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

092 to 090: consequential handoff

Logic and reasoning systems -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

092 to 091: consequential handoff

Logic and reasoning systems -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

092 to 092: consequential handoff

Logic and reasoning systems -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Logic and reasoning systems becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 697-703; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

092 to 093: consequential handoff

Logic and reasoning systems -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

092 to 094: consequential handoff

Logic and reasoning systems -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

092 to 095: consequential handoff

Logic and reasoning systems -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

092 to 096: consequential handoff

Logic and reasoning systems -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

092 to 097: consequential handoff

Logic and reasoning systems -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

092 to 098: consequential handoff

Logic and reasoning systems -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

092 to 099: consequential handoff

Logic and reasoning systems -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

092 to 100: consequential handoff

Logic and reasoning systems -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

092 to 101: consequential handoff

Logic and reasoning systems -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

092 to 102: consequential handoff

Logic and reasoning systems -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

092 to 103: consequential handoff

Logic and reasoning systems -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

092 to 104: consequential handoff

Logic and reasoning systems -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

092 to 105: consequential handoff

Logic and reasoning systems -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

092 to 106: consequential handoff

Logic and reasoning systems -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

092 to 107: consequential handoff

Logic and reasoning systems -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

092 to 108: consequential handoff

Logic and reasoning systems -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

092 to 109: consequential handoff

Logic and reasoning systems -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

092 to 110: consequential handoff

Logic and reasoning systems -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

092 to 111: consequential handoff

Logic and reasoning systems -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

092 to 112: consequential handoff

Logic and reasoning systems -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

092 to 113: consequential handoff

Logic and reasoning systems -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

092 to 114: consequential handoff

Logic and reasoning systems -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

092 to 115: consequential handoff

Logic and reasoning systems -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

092 to 116: consequential handoff

Logic and reasoning systems -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

092 to 117: consequential handoff

Logic and reasoning systems -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

092 to 118: consequential handoff

Logic and reasoning systems -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

092 to 119: consequential handoff

Logic and reasoning systems -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

092 to 120: consequential handoff

Logic and reasoning systems -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Logic and reasoning systems into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Single logical calculus. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Reasoner, downstream decision. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Multi-logic translation + contradiction provenance. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Formal benchmark' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 697-703 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

092: Logic and reasoning systems

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Logic and reasoning systems is described in the Atlas as: Premises, inference rules, contradictions, uncertainty and goals. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Consistency in one calculus loses expressivity/context elsewhere. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Reasoner, downstream decision. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multi-logic translation + contradiction provenance. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Validity, expressivity and computational tractability improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Formal benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Logic and reasoning systems

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Logic and reasoning systems is described in the Atlas as: Premises, inference rules, contradictions, uncertainty and goals. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Consistency in one calculus loses expressivity/context elsewhere. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Reasoner, downstream decision. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multi-logic translation + contradiction provenance. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Validity, expressivity and computational tractability improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Use Formal benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Logic and reasoning systems

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Logic and reasoning systems is described in the Atlas as: Premises, inference rules, contradictions, uncertainty and goals. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Consistency in one calculus loses expressivity/context elsewhere. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Reasoner, downstream decision. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multi-logic translation + contradiction provenance. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Validity, expressivity and computational tractability improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Formal benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Household / family / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Logic and reasoning systems is described in the Atlas as: Premises, inference rules, contradictions, uncertainty and goals. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Consistency in one calculus loses expressivity/context elsewhere. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Reasoner, downstream decision. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multi-logic translation + contradiction provenance. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

Logic and reasoning systems is described in the Atlas as: Premises, inference rules, contradictions, uncertainty and goals. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Consistency in one calculus loses expressivity/context elsewhere. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Reasoner, downstream decision. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multi-logic translation + contradiction provenance. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Validity, expressivity and computational tractability improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Formal benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Logic and reasoning systems is described in the Atlas as: Premises, inference rules, contradictions, uncertainty and goals. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Consistency in one calculus loses expressivity/context elsewhere. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Reasoner, downstream decision. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multi-logic translation + contradiction provenance. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Validity, expressivity and computational tractability improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Formal benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Scientific laboratory / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Logic and reasoning systems is described in the Atlas as: Premises, inference rules, contradictions, uncertainty and goals. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Consistency in one calculus loses expressivity/context elsewhere. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Reasoner, downstream decision. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multi-logic translation + contradiction provenance. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

092: Logic and reasoning systems

Public infrastructure / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Logic and reasoning systems is described in the Atlas as: Premises, inference rules, contradictions, uncertainty and goals. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Consistency in one calculus loses expressivity/context elsewhere. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Reasoner, downstream decision. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multi-logic translation + contradiction provenance. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Validity, expressivity and computational tractability improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Formal benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

092: Logic and reasoning systems

Interregional / planetary / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Logic and reasoning systems is described in the Atlas as: Premises, inference rules, contradictions, uncertainty and goals. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Consistency in one calculus loses expressivity/context elsewhere. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Reasoner, downstream decision. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Multi-logic translation + contradiction provenance. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Validity, expressivity and computational tractability improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Formal benchmark or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Evidence and source reconstruction

Logic and reasoning systems | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Boundary divergence

Logic and reasoning systems | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Causal diagram and identifiability

Logic and reasoning systems | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Receiving carrier identification

Logic and reasoning systems | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Hidden compensation accounting

Logic and reasoning systems | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Native units and dimensional integrity

Logic and reasoning systems | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Capacity specification

Logic and reasoning systems | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Intervention design

Logic and reasoning systems | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Incumbent parity contest

Logic and reasoning systems | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Time-window and recurrence

Logic and reasoning systems | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Ethical and legal safety

Logic and reasoning systems | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Sensitivity and negative controls

Logic and reasoning systems | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

092: Replication and provenance

Logic and reasoning systems | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

092: Cross-domain invariant contest

Logic and reasoning systems | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 092: Logic and reasoning systems; original author status: Formal frontier. Native state: Premises, inference rules, contradictions, uncertainty and goals.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Single logical calculus. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Consistency in one calculus loses expressivity/context elsewhere. The relevant receiving carriers are: Reasoner, downstream decision.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Multi-logic translation + contradiction provenance. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Validity, expressivity and computational tractability improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Formal benchmark. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 092, pp. 697-703 (Rufino 2026).

Adapter 093: Geography and territorial systems

Frontier, illicit and cosmic | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

People, ecosystems, infrastructure, flows and administrative boundaries

RECORDED RECEIVING SCHEMA

Jurisdiction/map boundary

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Administrative optimization ignores cross-border flows. Candidate receivers: Border communities, watersheds, networks.

EXISTING CAPACITY DESIGN

Flow-based territorial state model

PROTECTED OUTCOME STATED BY THE AUTHOR

Access, resilience and cross-boundary fairness improve

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Regional pilot. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093 | Geography and territorial systems

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 093, Geography and territorial systems. Native state: People, ecosystems, infrastructure, flows and administrative boundaries. A human may be a researcher, operator, regulated party or downstream recipient of this Geography and territorial systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Administrative optimization ignores cross-border flows.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Flow-based territorial state model can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, resilience and cross-boundary fairness improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

093 | Geography and territorial systems

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 093, Geography and territorial systems. Native state: People, ecosystems, infrastructure, flows and administrative boundaries. A human may be a researcher, operator, regulated party or downstream recipient of this Geography and territorial systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Administrative optimization ignores cross-border flows.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Flow-based territorial state model can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, resilience and cross-boundary fairness improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

093 | Geography and territorial systems

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 093, Geography and territorial systems. Native state: People, ecosystems, infrastructure, flows and administrative boundaries. A human may be a researcher, operator, regulated party or downstream recipient of this Geography and territorial systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Administrative optimization ignores cross-border flows.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Flow-based territorial state model can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, resilience and cross-boundary fairness improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

093 | Geography and territorial systems

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 093, Geography and territorial systems. Native state: People, ecosystems, infrastructure, flows and administrative boundaries. A human may be a researcher, operator, regulated party or downstream recipient of this Geography and territorial systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Administrative optimization ignores cross-border flows.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Flow-based territorial state model can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, resilience and cross-boundary fairness improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

093 | Geography and territorial systems

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 093, Geography and territorial systems. Native state: People, ecosystems, infrastructure, flows and administrative boundaries. A human may be a researcher, operator, regulated party or downstream recipient of this Geography and territorial systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Administrative optimization ignores cross-border flows.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Flow-based territorial state model can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, resilience and cross-boundary fairness improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

093 | Geography and territorial systems

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 093, Geography and territorial systems. Native state: People, ecosystems, infrastructure, flows and administrative boundaries. A human may be a researcher, operator, regulated party or downstream recipient of this Geography and territorial systems system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Administrative optimization ignores cross-border flows.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Flow-based territorial state model can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Access, resilience and cross-boundary fairness improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

093 to 001: consequential handoff

Geography and territorial systems -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

093 to 002: consequential handoff

Geography and territorial systems -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

093 to 003: consequential handoff

Geography and territorial systems -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

093 to 004: consequential handoff

Geography and territorial systems -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

093 to 005: consequential handoff

Geography and territorial systems -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

093 to 006: consequential handoff

Geography and territorial systems -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

093 to 007: consequential handoff

Geography and territorial systems -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

093 to 008: consequential handoff

Geography and territorial systems -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

093 to 009: consequential handoff

Geography and territorial systems -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

093 to 010: consequential handoff

Geography and territorial systems -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

093 to 011: consequential handoff

Geography and territorial systems -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

093 to 012: consequential handoff

Geography and territorial systems -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

093 to 013: consequential handoff

Geography and territorial systems -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

093 to 014: consequential handoff

Geography and territorial systems -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

093 to 015: consequential handoff

Geography and territorial systems -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

093 to 016: consequential handoff

Geography and territorial systems -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

093 to 017: consequential handoff

Geography and territorial systems -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

093 to 018: consequential handoff

Geography and territorial systems -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

093 to 019: consequential handoff

Geography and territorial systems -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

093 to 020: consequential handoff

Geography and territorial systems -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

093 to 021: consequential handoff

Geography and territorial systems -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

093 to 022: consequential handoff

Geography and territorial systems -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

093 to 023: consequential handoff

Geography and territorial systems -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

093 to 024: consequential handoff

Geography and territorial systems -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

093 to 025: consequential handoff

Geography and territorial systems -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

093 to 026: consequential handoff

Geography and territorial systems -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

093 to 027: consequential handoff

Geography and territorial systems -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

093 to 028: consequential handoff

Geography and territorial systems -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

093 to 029: consequential handoff

Geography and territorial systems -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

093 to 030: consequential handoff

Geography and territorial systems -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

093 to 031: consequential handoff

Geography and territorial systems -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

093 to 032: consequential handoff

Geography and territorial systems -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

093 to 033: consequential handoff

Geography and territorial systems -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

093 to 034: consequential handoff

Geography and territorial systems -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

093 to 035: consequential handoff

Geography and territorial systems -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

093 to 036: consequential handoff

Geography and territorial systems -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

093 to 037: consequential handoff

Geography and territorial systems -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

093 to 038: consequential handoff

Geography and territorial systems -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

093 to 039: consequential handoff

Geography and territorial systems -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

093 to 040: consequential handoff

Geography and territorial systems -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

093 to 041: consequential handoff

Geography and territorial systems -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

093 to 042: consequential handoff

Geography and territorial systems -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

093 to 043: consequential handoff

Geography and territorial systems -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

093 to 044: consequential handoff

Geography and territorial systems -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

093 to 045: consequential handoff

Geography and territorial systems -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

093 to 046: consequential handoff

Geography and territorial systems -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

093 to 047: consequential handoff

Geography and territorial systems -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

093 to 048: consequential handoff

Geography and territorial systems -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

093 to 049: consequential handoff

Geography and territorial systems -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

093 to 050: consequential handoff

Geography and territorial systems -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

093 to 051: consequential handoff

Geography and territorial systems -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

093 to 052: consequential handoff

Geography and territorial systems -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

093 to 053: consequential handoff

Geography and territorial systems -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

093 to 054: consequential handoff

Geography and territorial systems -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

093 to 055: consequential handoff

Geography and territorial systems -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

093 to 056: consequential handoff

Geography and territorial systems -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

093 to 057: consequential handoff

Geography and territorial systems -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

093 to 058: consequential handoff

Geography and territorial systems -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

093 to 059: consequential handoff

Geography and territorial systems -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

093 to 060: consequential handoff

Geography and territorial systems -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

093 to 061: consequential handoff

Geography and territorial systems -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

093 to 062: consequential handoff

Geography and territorial systems -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

093 to 063: consequential handoff

Geography and territorial systems -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

093 to 064: consequential handoff

Geography and territorial systems -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

093 to 065: consequential handoff

Geography and territorial systems -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

093 to 066: consequential handoff

Geography and territorial systems -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

093 to 067: consequential handoff

Geography and territorial systems -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

093 to 068: consequential handoff

Geography and territorial systems -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

093 to 069: consequential handoff

Geography and territorial systems -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

093 to 070: consequential handoff

Geography and territorial systems -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

093 to 071: consequential handoff

Geography and territorial systems -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

093 to 072: consequential handoff

Geography and territorial systems -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

093 to 073: consequential handoff

Geography and territorial systems -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

093 to 074: consequential handoff

Geography and territorial systems -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

093 to 075: consequential handoff

Geography and territorial systems -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

093 to 076: consequential handoff

Geography and territorial systems -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

093 to 077: consequential handoff

Geography and territorial systems -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

093 to 078: consequential handoff

Geography and territorial systems -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

093 to 079: consequential handoff

Geography and territorial systems -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

093 to 080: consequential handoff

Geography and territorial systems -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

093 to 081: consequential handoff

Geography and territorial systems -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

093 to 082: consequential handoff

Geography and territorial systems -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

093 to 083: consequential handoff

Geography and territorial systems -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

093 to 084: consequential handoff

Geography and territorial systems -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

093 to 085: consequential handoff

Geography and territorial systems -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

093 to 086: consequential handoff

Geography and territorial systems -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

093 to 087: consequential handoff

Geography and territorial systems -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

093 to 088: consequential handoff

Geography and territorial systems -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

093 to 089: consequential handoff

Geography and territorial systems -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

093 to 090: consequential handoff

Geography and territorial systems -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

093 to 091: consequential handoff

Geography and territorial systems -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

093 to 092: consequential handoff

Geography and territorial systems -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

093 to 093: consequential handoff

Geography and territorial systems -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Geography and territorial systems becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 704-710; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

093 to 094: consequential handoff

Geography and territorial systems -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

093 to 095: consequential handoff

Geography and territorial systems -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

093 to 096: consequential handoff

Geography and territorial systems -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

093 to 097: consequential handoff

Geography and territorial systems -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

093 to 098: consequential handoff

Geography and territorial systems -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

093 to 099: consequential handoff

Geography and territorial systems -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

093 to 100: consequential handoff

Geography and territorial systems -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

093 to 101: consequential handoff

Geography and territorial systems -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

093 to 102: consequential handoff

Geography and territorial systems -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

093 to 103: consequential handoff

Geography and territorial systems -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

093 to 104: consequential handoff

Geography and territorial systems -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

093 to 105: consequential handoff

Geography and territorial systems -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

093 to 106: consequential handoff

Geography and territorial systems -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

093 to 107: consequential handoff

Geography and territorial systems -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

093 to 108: consequential handoff

Geography and territorial systems -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

093 to 109: consequential handoff

Geography and territorial systems -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

093 to 110: consequential handoff

Geography and territorial systems -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

093 to 111: consequential handoff

Geography and territorial systems -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

093 to 112: consequential handoff

Geography and territorial systems -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

093 to 113: consequential handoff

Geography and territorial systems -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

093 to 114: consequential handoff

Geography and territorial systems -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

093 to 115: consequential handoff

Geography and territorial systems -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

093 to 116: consequential handoff

Geography and territorial systems -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

093 to 117: consequential handoff

Geography and territorial systems -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

093 to 118: consequential handoff

Geography and territorial systems -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

093 to 119: consequential handoff

Geography and territorial systems -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

093 to 120: consequential handoff

Geography and territorial systems -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Geography and territorial systems into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Jurisdiction/map boundary. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Border communities, watersheds, networks. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Flow-based territorial state model. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Regional pilot' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 704-710 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

093: Geography and territorial systems

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Geography and territorial systems is described in the Atlas as: People, ecosystems, infrastructure, flows and administrative boundaries. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Administrative optimization ignores cross-border flows. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Border communities, watersheds, networks. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Flow-based territorial state model. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Access, resilience and cross-boundary fairness improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Regional pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Geography and territorial systems

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Geography and territorial systems is described in the Atlas as: People, ecosystems, infrastructure, flows and administrative boundaries. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Administrative optimization ignores cross-border flows. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Border communities, watersheds, networks. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Flow-based territorial state model. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Access, resilience and cross-boundary fairness improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Regional pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Geography and territorial systems

Enterprise / cooperative / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Enterprise / cooperative. handoff links throughput, workers, buyers, capital and governance. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Geography and territorial systems is described in the Atlas as: People, ecosystems, infrastructure, flows and administrative boundaries. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Administrative optimization ignores cross-border flows. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Border communities, watersheds, networks. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Flow-based territorial state model. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Access, resilience and cross-boundary fairness improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Regional pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Evaluate a capacity build based on: Flow-based territorial state model. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Access, resilience and cross-boundary fairness improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Regional pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

093: Geography and territorial systems

Ecological catchment / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Geography and territorial systems is described in the Atlas as: People, ecosystems, infrastructure, flows and administrative boundaries. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Administrative optimization ignores cross-border flows. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Border communities, watersheds, networks. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Flow-based territorial state model. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Access, resilience and cross-boundary fairness improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Regional pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Evaluate a capacity build based on: Flow-based territorial state model. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Access, resilience and cross-boundary fairness improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Regional pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Geography and territorial systems

Digital / AI service / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Geography and territorial systems is described in the Atlas as: People, ecosystems, infrastructure, flows and administrative boundaries. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Administrative optimization ignores cross-border flows. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Border communities, watersheds, networks. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Flow-based territorial state model. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Access, resilience and cross-boundary fairness improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Digital / AI service / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Geography and territorial systems is described in the Atlas as: People, ecosystems, infrastructure, flows and administrative boundaries. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Administrative optimization ignores cross-border flows. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Border communities, watersheds, networks. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Flow-based territorial state model. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

093: Geography and territorial systems

Interregional / planetary / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Geography and territorial systems is described in the Atlas as: People, ecosystems, infrastructure, flows and administrative boundaries. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Administrative optimization ignores cross-border flows. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Border communities, watersheds, networks. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Flow-based territorial state model. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Access, resilience and cross-boundary fairness improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

093: Evidence and source reconstruction

Geography and territorial systems | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Boundary divergence

Geography and territorial systems | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Causal diagram and identifiability

Geography and territorial systems | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Receiving carrier identification

Geography and territorial systems | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Hidden compensation accounting

Geography and territorial systems | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

093: Native units and dimensional integrity

Geography and territorial systems | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Capacity specification

Geography and territorial systems | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Intervention design

Geography and territorial systems | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Incumbent parity contest

Geography and territorial systems | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

093: Time-window and recurrence

Geography and territorial systems | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

093: Ethical and legal safety

Geography and territorial systems | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

093: Sensitivity and negative controls

Geography and territorial systems | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 093, pp. 704-710 (Rufino 2026).

093: Replication and provenance

Geography and territorial systems | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

093: Cross-domain invariant contest

Geography and territorial systems | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 093: Geography and territorial systems; original author status: Constructive protocol. Native state: People, ecosystems, infrastructure, flows and administrative boundaries.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Jurisdiction/map boundary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Administrative optimization ignores cross-border flows. The relevant receiving carriers are: Border communities, watersheds, networks.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Flow-based territorial state model. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Access, resilience and cross-boundary fairness improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Regional pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Adapter 094: Informal economy

Frontier, illicit and cosmic | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Real work, exchange, trust, risk and household needs outside formal records

RECORDED RECEIVING SCHEMA

Formal registry/tax/business schema

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Productive activity remains invisible or excluded. Candidate receivers: Workers, households, state.

EXISTING CAPACITY DESIGN

Low-friction recognition, protection and access architecture

PROTECTED OUTCOME STATED BY THE AUTHOR

Income, safety, access and compliance improve

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Field pilot. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094 | Informal economy

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

094 | Informal economy

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

094 | Informal economy

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

094 | Informal economy

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

094 | Informal economy

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

094 | Informal economy

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 094, Informal economy. Native state: Real work, exchange, trust, risk and household needs outside formal records. A human may be a researcher, operator, regulated party or downstream recipient of this Informal economy system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Productive activity remains invisible or excluded.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Low-friction recognition, protection and access architecture can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Income, safety, access and compliance improve. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

094 to 001: consequential handoff

Informal economy -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

094 to 002: consequential handoff

Informal economy -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

094 to 003: consequential handoff

Informal economy -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

094 to 004: consequential handoff

Informal economy -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

094 to 005: consequential handoff

Informal economy -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

094 to 006: consequential handoff

Informal economy -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

094 to 007: consequential handoff

Informal economy -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

094 to 008: consequential handoff

Informal economy -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

094 to 009: consequential handoff

Informal economy -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

094 to 010: consequential handoff

Informal economy -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

094 to 011: consequential handoff

Informal economy -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

094 to 012: consequential handoff

Informal economy -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

094 to 013: consequential handoff

Informal economy -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

094 to 014: consequential handoff

Informal economy -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

094 to 015: consequential handoff

Informal economy -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

094 to 016: consequential handoff

Informal economy -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

094 to 017: consequential handoff

Informal economy -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

094 to 018: consequential handoff

Informal economy -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

094 to 019: consequential handoff

Informal economy -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

094 to 020: consequential handoff

Informal economy -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

094 to 021: consequential handoff

Informal economy -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

094 to 022: consequential handoff

Informal economy -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

094 to 023: consequential handoff

Informal economy -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

094 to 024: consequential handoff

Informal economy -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

094 to 025: consequential handoff

Informal economy -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

094 to 026: consequential handoff

Informal economy -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

094 to 027: consequential handoff

Informal economy -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

094 to 028: consequential handoff

Informal economy -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

094 to 029: consequential handoff

Informal economy -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

094 to 030: consequential handoff

Informal economy -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

094 to 031: consequential handoff

Informal economy -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

094 to 032: consequential handoff

Informal economy -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

094 to 033: consequential handoff

Informal economy -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

094 to 034: consequential handoff

Informal economy -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

094 to 035: consequential handoff

Informal economy -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

094 to 036: consequential handoff

Informal economy -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

094 to 037: consequential handoff

Informal economy -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

094 to 038: consequential handoff

Informal economy -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

094 to 039: consequential handoff

Informal economy -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

094 to 040: consequential handoff

Informal economy -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

094 to 041: consequential handoff

Informal economy -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

094 to 042: consequential handoff

Informal economy -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

094 to 043: consequential handoff

Informal economy -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

094 to 044: consequential handoff

Informal economy -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

094 to 045: consequential handoff

Informal economy -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

094 to 046: consequential handoff

Informal economy -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

094 to 047: consequential handoff

Informal economy -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

094 to 048: consequential handoff

Informal economy -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

094 to 049: consequential handoff

Informal economy -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

094 to 050: consequential handoff

Informal economy -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

094 to 051: consequential handoff

Informal economy -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

094 to 052: consequential handoff

Informal economy -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

094 to 053: consequential handoff

Informal economy -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

094 to 054: consequential handoff

Informal economy -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

094 to 055: consequential handoff

Informal economy -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

094 to 056: consequential handoff

Informal economy -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

094 to 057: consequential handoff

Informal economy -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

094 to 058: consequential handoff

Informal economy -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

094 to 059: consequential handoff

Informal economy -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

094 to 060: consequential handoff

Informal economy -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

094 to 061: consequential handoff

Informal economy -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

094 to 062: consequential handoff

Informal economy -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

094 to 063: consequential handoff

Informal economy -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

094 to 064: consequential handoff

Informal economy -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

094 to 065: consequential handoff

Informal economy -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

094 to 066: consequential handoff

Informal economy -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

094 to 067: consequential handoff

Informal economy -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

094 to 068: consequential handoff

Informal economy -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

094 to 069: consequential handoff

Informal economy -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

094 to 070: consequential handoff

Informal economy -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

094 to 071: consequential handoff

Informal economy -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

094 to 072: consequential handoff

Informal economy -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

094 to 073: consequential handoff

Informal economy -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

094 to 074: consequential handoff

Informal economy -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

094 to 075: consequential handoff

Informal economy -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

094 to 076: consequential handoff

Informal economy -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

094 to 077: consequential handoff

Informal economy -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

094 to 078: consequential handoff

Informal economy -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

094 to 079: consequential handoff

Informal economy -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

094 to 080: consequential handoff

Informal economy -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

094 to 081: consequential handoff

Informal economy -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

094 to 082: consequential handoff

Informal economy -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

094 to 083: consequential handoff

Informal economy -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

094 to 084: consequential handoff

Informal economy -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

094 to 085: consequential handoff

Informal economy -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

094 to 086: consequential handoff

Informal economy -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

094 to 087: consequential handoff

Informal economy -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

094 to 088: consequential handoff

Informal economy -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

094 to 089: consequential handoff

Informal economy -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

094 to 090: consequential handoff

Informal economy -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

094 to 091: consequential handoff

Informal economy -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

094 to 092: consequential handoff

Informal economy -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

094 to 093: consequential handoff

Informal economy -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

094 to 094: consequential handoff

Informal economy -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Informal economy becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 711-717; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

094 to 095: consequential handoff

Informal economy -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

094 to 096: consequential handoff

Informal economy -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

094 to 097: consequential handoff

Informal economy -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

094 to 098: consequential handoff

Informal economy -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

094 to 099: consequential handoff

Informal economy -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

094 to 100: consequential handoff

Informal economy -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

094 to 101: consequential handoff

Informal economy -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

094 to 102: consequential handoff

Informal economy -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

094 to 103: consequential handoff

Informal economy -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

094 to 104: consequential handoff

Informal economy -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

094 to 105: consequential handoff

Informal economy -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

094 to 106: consequential handoff

Informal economy -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

094 to 107: consequential handoff

Informal economy -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

094 to 108: consequential handoff

Informal economy -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

094 to 109: consequential handoff

Informal economy -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

094 to 110: consequential handoff

Informal economy -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

094 to 111: consequential handoff

Informal economy -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

094 to 112: consequential handoff

Informal economy -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

094 to 113: consequential handoff

Informal economy -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

094 to 114: consequential handoff

Informal economy -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

094 to 115: consequential handoff

Informal economy -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

094 to 116: consequential handoff

Informal economy -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

094 to 117: consequential handoff

Informal economy -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

094 to 118: consequential handoff

Informal economy -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

094 to 119: consequential handoff

Informal economy -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

094 to 120: consequential handoff

Informal economy -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Informal economy into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Formal registry/tax/business schema. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Workers, households, state. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Low-friction recognition, protection and access architecture. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Field pilot' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 711-717 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

094: Informal economy

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Informal economy is described in the Atlas as: Real work, exchange, trust, risk and household needs outside formal records. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Productive activity remains invisible or excluded. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Workers, households, state. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Low-friction recognition, protection and access architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Income, safety, access and compliance improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Field pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Informal economy

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Informal economy is described in the Atlas as: Real work, exchange, trust, risk and household needs outside formal records. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Productive activity remains invisible or excluded. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Workers, households, state. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Low-friction recognition, protection and access architecture. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Income, safety, access and compliance improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Field pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Informal economy is described in the Atlas as: Real work, exchange, trust, risk and household needs outside formal records. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Productive activity remains invisible or excluded. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Workers, households, state. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Low-friction recognition, protection and access architecture. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Income, safety, access and compliance improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Field pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Informal economy

Household / family / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Informal economy is described in the Atlas as: Real work, exchange, trust, risk and household needs outside formal records. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Productive activity remains invisible or excluded. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Workers, households, state. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Low-friction recognition, protection and access architecture. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Income, safety, access and compliance improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Field pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

094: Informal economy

Household / family / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Informal economy is described in the Atlas as: Real work, exchange, trust, risk and household needs outside formal records. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Productive activity remains invisible or excluded. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Workers, households, state. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Low-friction recognition, protection and access architecture. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Income, safety, access and compliance improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Field pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

094: Informal economy

Healthcare / care team / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Healthcare / care team. handoff links treatment, safety, continuity, caregiving and costs. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Informal economy is described in the Atlas as: Real work, exchange, trust, risk and household needs outside formal records. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Productive activity remains invisible or excluded. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Workers, households, state. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Low-friction recognition, protection and access architecture. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Income, safety, access and compliance improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Field pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

094: Informal economy

Local government / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Informal economy is described in the Atlas as: Real work, exchange, trust, risk and household needs outside formal records. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Productive activity remains invisible or excluded. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Workers, households, state. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Low-friction recognition, protection and access architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Income, safety, access and compliance improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Field pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

094: Informal economy

Public infrastructure / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Informal economy is described in the Atlas as: Real work, exchange, trust, risk and household needs outside formal records. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Productive activity remains invisible or excluded. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Workers, households, state. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Low-friction recognition, protection and access architecture. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Income, safety, access and compliance improve. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Field pilot or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

094: Evidence and source reconstruction

Informal economy | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Boundary divergence

Informal economy | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Causal diagram and identifiability

Informal economy | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Receiving carrier identification

Informal economy | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Hidden compensation accounting

Informal economy | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Native units and dimensional integrity

Informal economy | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Capacity specification

Informal economy | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Intervention design

Informal economy | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Incumbent parity contest

Informal economy | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Time-window and recurrence

Informal economy | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Ethical and legal safety

Informal economy | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Sensitivity and negative controls

Informal economy | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Replication and provenance

Informal economy | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

094: Cross-domain invariant contest

Informal economy | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 094: Informal economy; original author status: Constructive protocol. Native state: Real work, exchange, trust, risk and household needs outside formal records.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Formal registry/tax/business schema. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Productive activity remains invisible or excluded. The relevant receiving carriers are: Workers, households, state.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Low-friction recognition, protection and access architecture. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Income, safety, access and compliance improve.

RETEST AND SCOPE CONTROL

Candidate decisive method: Field pilot. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 094, pp. 711-717 (Rufino 2026).

Adapter 095: Illicit and black markets

Frontier, illicit and cosmic | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Hidden demand, supply, coercion, enforcement, prices and harm

RECORDED RECEIVING SCHEMA

Official market data that excludes hidden exchange

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Profit and access externalize violence, exploitation or public harm. Candidate receivers: Victims, communities, lawful firms, institutions.

EXISTING CAPACITY DESIGN

Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement

PROTECTED OUTCOME STATED BY THE AUTHOR

Harm and illicit profitability fall while legitimate access/opportunity rises

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Independent harm-reduction/public-safety evaluation. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026).

095 | Illicit and black markets

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

095 | Illicit and black markets

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

095 | Illicit and black markets

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

095 | Illicit and black markets

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

095 | Illicit and black markets

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

095 | Illicit and black markets

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 095, Illicit and black markets. Native state: Hidden demand, supply, coercion, enforcement, prices and harm. A human may be a researcher, operator, regulated party or downstream recipient of this Illicit and black markets system; a direct human causal effect must not be presumed.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Profit and access externalize violence, exploitation or public harm.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Harm and illicit profitability fall while legitimate access/opportunity rises. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

095 to 001: consequential handoff

Illicit and black markets -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

095 to 002: consequential handoff

Illicit and black markets -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

095 to 003: consequential handoff

Illicit and black markets -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

095 to 004: consequential handoff

Illicit and black markets -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

095 to 005: consequential handoff

Illicit and black markets -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

095 to 006: consequential handoff

Illicit and black markets -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

095 to 007: consequential handoff

Illicit and black markets -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

095 to 008: consequential handoff

Illicit and black markets -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

095 to 009: consequential handoff

Illicit and black markets -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

095 to 010: consequential handoff

Illicit and black markets -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

095 to 011: consequential handoff

Illicit and black markets -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

095 to 012: consequential handoff

Illicit and black markets -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

095 to 013: consequential handoff

Illicit and black markets -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

095 to 014: consequential handoff

Illicit and black markets -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

095 to 015: consequential handoff

Illicit and black markets -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

095 to 016: consequential handoff

Illicit and black markets -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

095 to 017: consequential handoff

Illicit and black markets -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

095 to 018: consequential handoff

Illicit and black markets -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

095 to 019: consequential handoff

Illicit and black markets -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

095 to 020: consequential handoff

Illicit and black markets -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

095 to 021: consequential handoff

Illicit and black markets -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

095 to 022: consequential handoff

Illicit and black markets -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

095 to 023: consequential handoff

Illicit and black markets -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

095 to 024: consequential handoff

Illicit and black markets -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

095 to 025: consequential handoff

Illicit and black markets -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

095 to 026: consequential handoff

Illicit and black markets -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

095 to 027: consequential handoff

Illicit and black markets -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

095 to 028: consequential handoff

Illicit and black markets -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

095 to 029: consequential handoff

Illicit and black markets -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

095 to 030: consequential handoff

Illicit and black markets -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

095 to 031: consequential handoff

Illicit and black markets -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

095 to 032: consequential handoff

Illicit and black markets -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

095 to 033: consequential handoff

Illicit and black markets -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

095 to 034: consequential handoff

Illicit and black markets -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

095 to 035: consequential handoff

Illicit and black markets -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

095 to 036: consequential handoff

Illicit and black markets -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

095 to 037: consequential handoff

Illicit and black markets -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

095 to 038: consequential handoff

Illicit and black markets -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

095 to 039: consequential handoff

Illicit and black markets -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

095 to 040: consequential handoff

Illicit and black markets -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

095 to 041: consequential handoff

Illicit and black markets -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

095 to 042: consequential handoff

Illicit and black markets -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

095 to 043: consequential handoff

Illicit and black markets -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

095 to 044: consequential handoff

Illicit and black markets -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

095 to 045: consequential handoff

Illicit and black markets -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

095 to 046: consequential handoff

Illicit and black markets -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

095 to 047: consequential handoff

Illicit and black markets -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

095 to 048: consequential handoff

Illicit and black markets -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

095 to 049: consequential handoff

Illicit and black markets -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

095 to 050: consequential handoff

Illicit and black markets -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

095 to 051: consequential handoff

Illicit and black markets -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

095 to 052: consequential handoff

Illicit and black markets -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

095 to 053: consequential handoff

Illicit and black markets -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

095 to 054: consequential handoff

Illicit and black markets -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

095 to 055: consequential handoff

Illicit and black markets -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

095 to 056: consequential handoff

Illicit and black markets -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

095 to 057: consequential handoff

Illicit and black markets -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

095 to 058: consequential handoff

Illicit and black markets -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

095 to 059: consequential handoff

Illicit and black markets -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

095 to 060: consequential handoff

Illicit and black markets -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

095 to 061: consequential handoff

Illicit and black markets -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

095 to 062: consequential handoff

Illicit and black markets -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

095 to 063: consequential handoff

Illicit and black markets -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

095 to 064: consequential handoff

Illicit and black markets -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

095 to 065: consequential handoff

Illicit and black markets -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

095 to 066: consequential handoff

Illicit and black markets -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

095 to 067: consequential handoff

Illicit and black markets -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

095 to 068: consequential handoff

Illicit and black markets -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

095 to 069: consequential handoff

Illicit and black markets -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

095 to 070: consequential handoff

Illicit and black markets -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

095 to 071: consequential handoff

Illicit and black markets -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

095 to 072: consequential handoff

Illicit and black markets -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

095 to 073: consequential handoff

Illicit and black markets -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

095 to 074: consequential handoff

Illicit and black markets -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

095 to 075: consequential handoff

Illicit and black markets -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

095 to 076: consequential handoff

Illicit and black markets -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Illicit and black markets into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Official market data that excludes hidden exchange. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, communities, lawful firms, institutions. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Independent harm-reduction/public-safety evaluation' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 718-724 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 095, pp. 718-724 (Rufino 2026). Receiver Adapter 076 pp. 583-589.
