Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

100 to 067: consequential handoff

Unknown and not-yet-named realities -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

100 to 068: consequential handoff

Unknown and not-yet-named realities -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

100 to 069: consequential handoff

Unknown and not-yet-named realities -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

100 to 070: consequential handoff

Unknown and not-yet-named realities -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

100 to 071: consequential handoff

Unknown and not-yet-named realities -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

100 to 072: consequential handoff

Unknown and not-yet-named realities -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

100 to 073: consequential handoff

Unknown and not-yet-named realities -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

100 to 074: consequential handoff

Unknown and not-yet-named realities -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

100 to 075: consequential handoff

Unknown and not-yet-named realities -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

100 to 076: consequential handoff

Unknown and not-yet-named realities -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

100 to 077: consequential handoff

Unknown and not-yet-named realities -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

100 to 078: consequential handoff

Unknown and not-yet-named realities -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

100 to 079: consequential handoff

Unknown and not-yet-named realities -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

100 to 080: consequential handoff

Unknown and not-yet-named realities -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

100 to 081: consequential handoff

Unknown and not-yet-named realities -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

100 to 082: consequential handoff

Unknown and not-yet-named realities -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

100 to 083: consequential handoff

Unknown and not-yet-named realities -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

100 to 084: consequential handoff

Unknown and not-yet-named realities -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

100 to 085: consequential handoff

Unknown and not-yet-named realities -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

100 to 086: consequential handoff

Unknown and not-yet-named realities -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

100 to 087: consequential handoff

Unknown and not-yet-named realities -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

100 to 088: consequential handoff

Unknown and not-yet-named realities -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

100 to 089: consequential handoff

Unknown and not-yet-named realities -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

100 to 090: consequential handoff

Unknown and not-yet-named realities -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

100 to 091: consequential handoff

Unknown and not-yet-named realities -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

100 to 092: consequential handoff

Unknown and not-yet-named realities -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

100 to 093: consequential handoff

Unknown and not-yet-named realities -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

100 to 094: consequential handoff

Unknown and not-yet-named realities -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

100 to 095: consequential handoff

Unknown and not-yet-named realities -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

100 to 096: consequential handoff

Unknown and not-yet-named realities -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

100 to 097: consequential handoff

Unknown and not-yet-named realities -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

100 to 098: consequential handoff

Unknown and not-yet-named realities -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

100 to 099: consequential handoff

Unknown and not-yet-named realities -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

100 to 100: consequential handoff

Unknown and not-yet-named realities -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Unknown and not-yet-named realities becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 753-759; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

100 to 101: consequential handoff

Unknown and not-yet-named realities -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

100 to 102: consequential handoff

Unknown and not-yet-named realities -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

100 to 103: consequential handoff

Unknown and not-yet-named realities -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

100 to 104: consequential handoff

Unknown and not-yet-named realities -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

100 to 105: consequential handoff

Unknown and not-yet-named realities -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

100 to 106: consequential handoff

Unknown and not-yet-named realities -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

100 to 107: consequential handoff

Unknown and not-yet-named realities -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

100 to 108: consequential handoff

Unknown and not-yet-named realities -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

100 to 109: consequential handoff

Unknown and not-yet-named realities -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

100 to 110: consequential handoff

Unknown and not-yet-named realities -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

100 to 111: consequential handoff

Unknown and not-yet-named realities -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

100 to 112: consequential handoff

Unknown and not-yet-named realities -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

100 to 113: consequential handoff

Unknown and not-yet-named realities -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

100 to 114: consequential handoff

Unknown and not-yet-named realities -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

100 to 115: consequential handoff

Unknown and not-yet-named realities -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

100 to 116: consequential handoff

Unknown and not-yet-named realities -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

100 to 117: consequential handoff

Unknown and not-yet-named realities -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

100 to 118: consequential handoff

Unknown and not-yet-named realities -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

100 to 119: consequential handoff

Unknown and not-yet-named realities -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

100 to 120: consequential handoff

Unknown and not-yet-named realities -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Unknown and not-yet-named realities into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: No adequate schema exists yet. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Unknown until carrier tracing identifies it. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Freeze kernel before learning outcomes; then holdout/replicate' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 753-759 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

100: Unknown and not-yet-named realities

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Unknown and not-yet-named realities is described in the Atlas as: Any newly observed substrate, scale, agent, value dimension or exchange mode. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Unrepresented state is invisible until consequences accumulate. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Unknown until carrier tracing identifies it. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: All material carriers in the new domain cross positive consequential thresholds. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Freeze kernel before learning outcomes; then holdout/replicate or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026).

100: Unknown and not-yet-named realities

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Unknown and not-yet-named realities is described in the Atlas as: Any newly observed substrate, scale, agent, value dimension or exchange mode. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Unrepresented state is invisible until consequences accumulate. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Unknown until carrier tracing identifies it. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: All material carriers in the new domain cross positive consequential thresholds. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

100: Unknown and not-yet-named realities

Enterprise / cooperative / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Enterprise / cooperative. handoff links throughput, workers, buyers, capital and governance. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Unknown and not-yet-named realities is described in the Atlas as: Any newly observed substrate, scale, agent, value dimension or exchange mode. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Unrepresented state is invisible until consequences accumulate. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Unknown until carrier tracing identifies it. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: All material carriers in the new domain cross positive consequential thresholds. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Freeze kernel before learning outcomes; then holdout/replicate or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Unrepresented state is invisible until consequences accumulate. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Unknown until carrier tracing identifies it. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: All material carriers in the new domain cross positive consequential thresholds. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Freeze kernel before learning outcomes; then holdout/replicate or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

100: Unknown and not-yet-named realities

Ecological catchment / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Unknown and not-yet-named realities is described in the Atlas as: Any newly observed substrate, scale, agent, value dimension or exchange mode. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Unrepresented state is invisible until consequences accumulate. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Unknown until carrier tracing identifies it. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

100: Unknown and not-yet-named realities

Digital / AI service / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Unknown and not-yet-named realities is described in the Atlas as: Any newly observed substrate, scale, agent, value dimension or exchange mode. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Unrepresented state is invisible until consequences accumulate. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Unknown until carrier tracing identifies it. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: All material carriers in the new domain cross positive consequential thresholds. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Freeze kernel before learning outcomes; then holdout/replicate or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026).

100: Evidence and source reconstruction

Unknown and not-yet-named realities | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: All material carriers in the new domain cross positive consequential thresholds.

RETEST AND SCOPE CONTROL

Candidate decisive method: Freeze kernel before learning outcomes; then holdout/replicate. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026).

100: Boundary divergence

Unknown and not-yet-named realities | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

100: Receiving carrier identification

Unknown and not-yet-named realities | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

100: Hidden compensation accounting

Unknown and not-yet-named realities | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

100: Native units and dimensional integrity

Unknown and not-yet-named realities | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

100: Capacity specification

Unknown and not-yet-named realities | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

100: Intervention design

Unknown and not-yet-named realities | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

100: Incumbent parity contest

Unknown and not-yet-named realities | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: All material carriers in the new domain cross positive consequential thresholds.

RETEST AND SCOPE CONTROL

Candidate decisive method: Freeze kernel before learning outcomes; then holdout/replicate. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026).

100: Time-window and recurrence

Unknown and not-yet-named realities | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: All material carriers in the new domain cross positive consequential thresholds.

RETEST AND SCOPE CONTROL

Candidate decisive method: Freeze kernel before learning outcomes; then holdout/replicate. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026).

100: Ethical and legal safety

Unknown and not-yet-named realities | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: All material carriers in the new domain cross positive consequential thresholds.

RETEST AND SCOPE CONTROL

Candidate decisive method: Freeze kernel before learning outcomes; then holdout/replicate. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026).

100: Sensitivity and negative controls

Unknown and not-yet-named realities | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

100: Cross-domain invariant contest

Unknown and not-yet-named realities | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 100: Unknown and not-yet-named realities; original author status: Open by definition. Native state: Any newly observed substrate, scale, agent, value dimension or exchange mode.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: No adequate schema exists yet. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Unrepresented state is invisible until consequences accumulate. The relevant receiving carriers are: Unknown until carrier tracing identifies it.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Show a feasible native action rather than restating a goal.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 100, pp. 753-759 (Rufino 2026).

Adapter 101: Conscious experience and self-model

Conscious agency and responsibility | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Perception, affect, memory, self-model, attention, internal accessibility and embodied state

RECORDED RECEIVING SCHEMA

A receiving observer reduces another system to behavior, category or output alone

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Native conscious state is misread because only externally legible signals are counted.
Candidate receivers: Experiencing system, observers, dependent systems and future self.

EXISTING CAPACITY DESIGN

Cross-modal state representation with provenance, uncertainty and non-erasure constraints

PROTECTED OUTCOME STATED BY THE AUTHOR

Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Prospective multi-method cross-observer study. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101 | Conscious experience and self-model

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 101, Conscious experience and self-model. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Potential direct or institutional human pathway: Conscious experience and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Native conscious state is misread because only externally legible signals are counted.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-modal state representation with provenance, uncertainty and non-erasure constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

101 | Conscious experience and self-model

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 101, Conscious experience and self-model. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Potential direct or institutional human pathway: Conscious experience and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Native conscious state is misread because only externally legible signals are counted.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-modal state representation with provenance, uncertainty and non-erasure constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

101 | Conscious experience and self-model

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 101, Conscious experience and self-model. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Potential direct or institutional human pathway: Conscious experience and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Native conscious state is misread because only externally legible signals are counted.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-modal state representation with provenance, uncertainty and non-erasure constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

101 | Conscious experience and self-model

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 101, Conscious experience and self-model. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Potential direct or institutional human pathway: Conscious experience and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Native conscious state is misread because only externally legible signals are counted.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-modal state representation with provenance, uncertainty and non-erasure constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

101 | Conscious experience and self-model

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 101, Conscious experience and self-model. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Potential direct or institutional human pathway: Conscious experience and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Native conscious state is misread because only externally legible signals are counted.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Cross-modal state representation with provenance, uncertainty and non-erasure constraints can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

101 | Conscious experience and self-model

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 101, Conscious experience and self-model. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Potential direct or institutional human pathway: Conscious experience and self-model interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Native conscious state is misread because only externally legible signals are counted.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

101 to 001: consequential handoff

Conscious experience and self-model -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

101 to 002: consequential handoff

Conscious experience and self-model -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

101 to 003: consequential handoff

Conscious experience and self-model -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

101 to 004: consequential handoff

Conscious experience and self-model -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

101 to 005: consequential handoff

Conscious experience and self-model -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

101 to 006: consequential handoff

Conscious experience and self-model -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

101 to 007: consequential handoff

Conscious experience and self-model -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

101 to 008: consequential handoff

Conscious experience and self-model -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

101 to 009: consequential handoff

Conscious experience and self-model -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

101 to 010: consequential handoff

Conscious experience and self-model -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

101 to 011: consequential handoff

Conscious experience and self-model -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

101 to 012: consequential handoff

Conscious experience and self-model -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

101 to 013: consequential handoff

Conscious experience and self-model -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

101 to 014: consequential handoff

Conscious experience and self-model -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

101 to 015: consequential handoff

Conscious experience and self-model -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

101 to 016: consequential handoff

Conscious experience and self-model -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

101 to 017: consequential handoff

Conscious experience and self-model -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

101 to 018: consequential handoff

Conscious experience and self-model -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

101 to 019: consequential handoff

Conscious experience and self-model -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

101 to 020: consequential handoff

Conscious experience and self-model -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

101 to 021: consequential handoff

Conscious experience and self-model -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

101 to 022: consequential handoff

Conscious experience and self-model -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

101 to 023: consequential handoff

Conscious experience and self-model -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

101 to 024: consequential handoff

Conscious experience and self-model -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

101 to 025: consequential handoff

Conscious experience and self-model -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

101 to 026: consequential handoff

Conscious experience and self-model -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

101 to 027: consequential handoff

Conscious experience and self-model -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

101 to 028: consequential handoff

Conscious experience and self-model -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

101 to 029: consequential handoff

Conscious experience and self-model -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

101 to 030: consequential handoff

Conscious experience and self-model -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

101 to 031: consequential handoff

Conscious experience and self-model -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

101 to 032: consequential handoff

Conscious experience and self-model -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

101 to 033: consequential handoff

Conscious experience and self-model -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

101 to 034: consequential handoff

Conscious experience and self-model -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

101 to 035: consequential handoff

Conscious experience and self-model -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

101 to 036: consequential handoff

Conscious experience and self-model -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

101 to 037: consequential handoff

Conscious experience and self-model -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

101 to 038: consequential handoff

Conscious experience and self-model -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

101 to 039: consequential handoff

Conscious experience and self-model -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

101 to 040: consequential handoff

Conscious experience and self-model -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

101 to 041: consequential handoff

Conscious experience and self-model -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

101 to 042: consequential handoff

Conscious experience and self-model -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

101 to 043: consequential handoff

Conscious experience and self-model -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

101 to 044: consequential handoff

Conscious experience and self-model -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

101 to 045: consequential handoff

Conscious experience and self-model -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

101 to 046: consequential handoff

Conscious experience and self-model -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

101 to 047: consequential handoff

Conscious experience and self-model -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

101 to 048: consequential handoff

Conscious experience and self-model -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

101 to 049: consequential handoff

Conscious experience and self-model -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

101 to 050: consequential handoff

Conscious experience and self-model -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

101 to 051: consequential handoff

Conscious experience and self-model -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

101 to 052: consequential handoff

Conscious experience and self-model -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

101 to 053: consequential handoff

Conscious experience and self-model -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

101 to 054: consequential handoff

Conscious experience and self-model -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

101 to 055: consequential handoff

Conscious experience and self-model -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

101 to 056: consequential handoff

Conscious experience and self-model -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

101 to 057: consequential handoff

Conscious experience and self-model -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

101 to 058: consequential handoff

Conscious experience and self-model -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

101 to 059: consequential handoff

Conscious experience and self-model -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

101 to 060: consequential handoff

Conscious experience and self-model -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

101 to 061: consequential handoff

Conscious experience and self-model -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

101 to 062: consequential handoff

Conscious experience and self-model -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

101 to 063: consequential handoff

Conscious experience and self-model -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

101 to 064: consequential handoff

Conscious experience and self-model -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

101 to 065: consequential handoff

Conscious experience and self-model -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

101 to 066: consequential handoff

Conscious experience and self-model -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

101 to 067: consequential handoff

Conscious experience and self-model -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

101 to 068: consequential handoff

Conscious experience and self-model -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

101 to 069: consequential handoff

Conscious experience and self-model -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

101 to 070: consequential handoff

Conscious experience and self-model -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

101 to 071: consequential handoff

Conscious experience and self-model -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

101 to 072: consequential handoff

Conscious experience and self-model -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

101 to 073: consequential handoff

Conscious experience and self-model -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

101 to 074: consequential handoff

Conscious experience and self-model -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

101 to 075: consequential handoff

Conscious experience and self-model -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

101 to 076: consequential handoff

Conscious experience and self-model -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

101 to 077: consequential handoff

Conscious experience and self-model -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

101 to 078: consequential handoff

Conscious experience and self-model -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

101 to 079: consequential handoff

Conscious experience and self-model -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

101 to 080: consequential handoff

Conscious experience and self-model -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

101 to 081: consequential handoff

Conscious experience and self-model -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

101 to 082: consequential handoff

Conscious experience and self-model -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

101 to 083: consequential handoff

Conscious experience and self-model -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

101 to 084: consequential handoff

Conscious experience and self-model -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

101 to 085: consequential handoff

Conscious experience and self-model -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

101 to 086: consequential handoff

Conscious experience and self-model -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

101 to 087: consequential handoff

Conscious experience and self-model -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

101 to 088: consequential handoff

Conscious experience and self-model -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

101 to 089: consequential handoff

Conscious experience and self-model -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

101 to 090: consequential handoff

Conscious experience and self-model -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

101 to 091: consequential handoff

Conscious experience and self-model -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

101 to 092: consequential handoff

Conscious experience and self-model -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

101 to 093: consequential handoff

Conscious experience and self-model -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

101 to 094: consequential handoff

Conscious experience and self-model -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

101 to 095: consequential handoff

Conscious experience and self-model -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

101 to 096: consequential handoff

Conscious experience and self-model -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

101 to 097: consequential handoff

Conscious experience and self-model -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

101 to 098: consequential handoff

Conscious experience and self-model -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

101 to 099: consequential handoff

Conscious experience and self-model -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

101 to 100: consequential handoff

Conscious experience and self-model -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

101 to 101: consequential handoff

Conscious experience and self-model -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Conscious experience and self-model becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 761-767; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

101 to 102: consequential handoff

Conscious experience and self-model -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

101 to 103: consequential handoff

Conscious experience and self-model -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

101 to 104: consequential handoff

Conscious experience and self-model -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

101 to 105: consequential handoff

Conscious experience and self-model -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

101 to 106: consequential handoff

Conscious experience and self-model -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

101 to 107: consequential handoff

Conscious experience and self-model -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

101 to 108: consequential handoff

Conscious experience and self-model -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

101 to 109: consequential handoff

Conscious experience and self-model -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

101 to 110: consequential handoff

Conscious experience and self-model -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

101 to 111: consequential handoff

Conscious experience and self-model -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

101 to 112: consequential handoff

Conscious experience and self-model -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

101 to 113: consequential handoff

Conscious experience and self-model -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

101 to 114: consequential handoff

Conscious experience and self-model -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

101 to 115: consequential handoff

Conscious experience and self-model -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

101 to 116: consequential handoff

Conscious experience and self-model -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

101 to 117: consequential handoff

Conscious experience and self-model -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

101 to 118: consequential handoff

Conscious experience and self-model -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

101 to 119: consequential handoff

Conscious experience and self-model -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

101 to 120: consequential handoff

Conscious experience and self-model -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Conscious experience and self-model into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: A receiving observer reduces another system to behavior, category or output alone. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Experiencing system, observers, dependent systems and future self. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective multi-method cross-observer study' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 761-767 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

101: Conscious experience and self-model

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Conscious experience and self-model

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Conscious experience and self-model

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Conscious experience and self-model

Household / family / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Conscious experience and self-model

Household / family / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

101: Conscious experience and self-model

Household / family / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

School / university / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Conscious experience and self-model

School / university / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

101: Conscious experience and self-model

School / university / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

101: Conscious experience and self-model

School / university / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

101: Conscious experience and self-model

Enterprise / cooperative / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Enterprise / cooperative. handoff links throughput, workers, buyers, capital and governance. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Conscious experience and self-model

Public infrastructure / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Conscious experience and self-model

Interregional / planetary / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Conscious experience and self-model is described in the Atlas as: Perception, affect, memory, self-model, attention, internal accessibility and embodied state. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Native conscious state is misread because only externally legible signals are counted. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Experiencing system, observers, dependent systems and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective multi-method cross-observer study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Evidence and source reconstruction

Conscious experience and self-model | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Boundary divergence

Conscious experience and self-model | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Causal diagram and identifiability

Conscious experience and self-model | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Receiving carrier identification

Conscious experience and self-model | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Hidden compensation accounting

Conscious experience and self-model | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Native units and dimensional integrity

Conscious experience and self-model | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Capacity specification

Conscious experience and self-model | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Intervention design

Conscious experience and self-model | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Incumbent parity contest

Conscious experience and self-model | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Time-window and recurrence

Conscious experience and self-model | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Ethical and legal safety

Conscious experience and self-model | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Sensitivity and negative controls

Conscious experience and self-model | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Replication and provenance

Conscious experience and self-model | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

101: Cross-domain invariant contest

Conscious experience and self-model | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 101: Conscious experience and self-model; original author status: Ontological / empirical frontier. Native state: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: A receiving observer reduces another system to behavior, category or output alone. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Native conscious state is misread because only externally legible signals are counted. The relevant receiving carriers are: Experiencing system, observers, dependent systems and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Legibility, agency and viable functioning increase without reducing an unmodeled carrier to zero.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective multi-method cross-observer study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 101, pp. 761-767 (Rufino 2026).

Adapter 102: Choice and option topology

Conscious agency and responsibility | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence

RECORDED RECEIVING SCHEMA

Binary free-choice / no-choice label

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Candidate receivers: Chooser, affected people, institutions and future option set.

EXISTING CAPACITY DESIGN

Feasible-option map plus prebuilt low-friction lawful/prosocial pathways

PROTECTED OUTCOME STATED BY THE AUTHOR

Agency expands while downstream harm and coercive friction fall

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Prospective choice-topology intervention. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102 | Choice and option topology

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 102, Choice and option topology. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Potential direct or institutional human pathway: Choice and option topology interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Feasible-option map plus prebuilt low-friction lawful/prosocial pathways can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agency expands while downstream harm and coercive friction fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

102 | Choice and option topology

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 102, Choice and option topology. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Potential direct or institutional human pathway: Choice and option topology interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Feasible-option map plus prebuilt low-friction lawful/prosocial pathways can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agency expands while downstream harm and coercive friction fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

102 | Choice and option topology

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 102, Choice and option topology. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Potential direct or institutional human pathway: Choice and option topology interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

102 | Choice and option topology

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 102, Choice and option topology. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Potential direct or institutional human pathway: Choice and option topology interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Feasible-option map plus prebuilt low-friction lawful/prosocial pathways can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agency expands while downstream harm and coercive friction fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

102 | Choice and option topology

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 102, Choice and option topology. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Potential direct or institutional human pathway: Choice and option topology interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Feasible-option map plus prebuilt low-friction lawful/prosocial pathways can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agency expands while downstream harm and coercive friction fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

102 | Choice and option topology

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 102, Choice and option topology. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Potential direct or institutional human pathway: Choice and option topology interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Feasible-option map plus prebuilt low-friction lawful/prosocial pathways can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agency expands while downstream harm and coercive friction fall. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

102 to 001: consequential handoff

Choice and option topology -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

102 to 002: consequential handoff

Choice and option topology -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

102 to 003: consequential handoff

Choice and option topology -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

102 to 004: consequential handoff

Choice and option topology -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

102 to 005: consequential handoff

Choice and option topology -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

102 to 006: consequential handoff

Choice and option topology -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

102 to 007: consequential handoff

Choice and option topology -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

102 to 008: consequential handoff

Choice and option topology -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

102 to 009: consequential handoff

Choice and option topology -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

102 to 010: consequential handoff

Choice and option topology -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

102 to 011: consequential handoff

Choice and option topology -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

102 to 012: consequential handoff

Choice and option topology -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

102 to 013: consequential handoff

Choice and option topology -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

102 to 014: consequential handoff

Choice and option topology -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

102 to 015: consequential handoff

Choice and option topology -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

102 to 016: consequential handoff

Choice and option topology -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

102 to 017: consequential handoff

Choice and option topology -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

102 to 018: consequential handoff

Choice and option topology -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

102 to 019: consequential handoff

Choice and option topology -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

102 to 020: consequential handoff

Choice and option topology -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

102 to 021: consequential handoff

Choice and option topology -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

102 to 022: consequential handoff

Choice and option topology -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

102 to 023: consequential handoff

Choice and option topology -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

102 to 024: consequential handoff

Choice and option topology -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

102 to 025: consequential handoff

Choice and option topology -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

102 to 026: consequential handoff

Choice and option topology -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

102 to 027: consequential handoff

Choice and option topology -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

102 to 028: consequential handoff

Choice and option topology -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

102 to 029: consequential handoff

Choice and option topology -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

102 to 030: consequential handoff

Choice and option topology -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

102 to 031: consequential handoff

Choice and option topology -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

102 to 032: consequential handoff

Choice and option topology -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

102 to 033: consequential handoff

Choice and option topology -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

102 to 034: consequential handoff

Choice and option topology -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

102 to 035: consequential handoff

Choice and option topology -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

102 to 036: consequential handoff

Choice and option topology -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

102 to 037: consequential handoff

Choice and option topology -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

102 to 038: consequential handoff

Choice and option topology -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

102 to 039: consequential handoff

Choice and option topology -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

102 to 040: consequential handoff

Choice and option topology -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

102 to 041: consequential handoff

Choice and option topology -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

102 to 042: consequential handoff

Choice and option topology -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

102 to 043: consequential handoff

Choice and option topology -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

102 to 044: consequential handoff

Choice and option topology -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

102 to 045: consequential handoff

Choice and option topology -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

102 to 046: consequential handoff

Choice and option topology -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

102 to 047: consequential handoff

Choice and option topology -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

102 to 048: consequential handoff

Choice and option topology -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

102 to 049: consequential handoff

Choice and option topology -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

102 to 050: consequential handoff

Choice and option topology -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

102 to 051: consequential handoff

Choice and option topology -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

102 to 052: consequential handoff

Choice and option topology -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

102 to 053: consequential handoff

Choice and option topology -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

102 to 054: consequential handoff

Choice and option topology -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

102 to 055: consequential handoff

Choice and option topology -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

102 to 056: consequential handoff

Choice and option topology -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

102 to 057: consequential handoff

Choice and option topology -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

102 to 058: consequential handoff

Choice and option topology -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

102 to 059: consequential handoff

Choice and option topology -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

102 to 060: consequential handoff

Choice and option topology -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

102 to 061: consequential handoff

Choice and option topology -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

102 to 062: consequential handoff

Choice and option topology -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

102 to 063: consequential handoff

Choice and option topology -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

102 to 064: consequential handoff

Choice and option topology -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

102 to 065: consequential handoff

Choice and option topology -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

102 to 066: consequential handoff

Choice and option topology -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

102 to 067: consequential handoff

Choice and option topology -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

102 to 068: consequential handoff

Choice and option topology -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

102 to 069: consequential handoff

Choice and option topology -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

102 to 070: consequential handoff

Choice and option topology -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

102 to 071: consequential handoff

Choice and option topology -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

102 to 072: consequential handoff

Choice and option topology -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

102 to 073: consequential handoff

Choice and option topology -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

102 to 074: consequential handoff

Choice and option topology -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

102 to 075: consequential handoff

Choice and option topology -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

102 to 076: consequential handoff

Choice and option topology -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

102 to 077: consequential handoff

Choice and option topology -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

102 to 078: consequential handoff

Choice and option topology -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

102 to 079: consequential handoff

Choice and option topology -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

102 to 080: consequential handoff

Choice and option topology -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

102 to 081: consequential handoff

Choice and option topology -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

102 to 082: consequential handoff

Choice and option topology -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

102 to 083: consequential handoff

Choice and option topology -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

102 to 084: consequential handoff

Choice and option topology -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

102 to 085: consequential handoff

Choice and option topology -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

102 to 086: consequential handoff

Choice and option topology -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

102 to 087: consequential handoff

Choice and option topology -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

102 to 088: consequential handoff

Choice and option topology -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

102 to 089: consequential handoff

Choice and option topology -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

102 to 090: consequential handoff

Choice and option topology -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

102 to 091: consequential handoff

Choice and option topology -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

102 to 092: consequential handoff

Choice and option topology -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

102 to 093: consequential handoff

Choice and option topology -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

102 to 094: consequential handoff

Choice and option topology -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

102 to 095: consequential handoff

Choice and option topology -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

102 to 096: consequential handoff

Choice and option topology -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

102 to 097: consequential handoff

Choice and option topology -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

102 to 098: consequential handoff

Choice and option topology -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

102 to 099: consequential handoff

Choice and option topology -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

102 to 100: consequential handoff

Choice and option topology -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

102 to 101: consequential handoff

Choice and option topology -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

102 to 102: consequential handoff

Choice and option topology -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Choice and option topology becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 768-774; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

102 to 103: consequential handoff

Choice and option topology -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

102 to 104: consequential handoff

Choice and option topology -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

102 to 105: consequential handoff

Choice and option topology -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

102 to 106: consequential handoff

Choice and option topology -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

102 to 107: consequential handoff

Choice and option topology -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

102 to 108: consequential handoff

Choice and option topology -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

102 to 109: consequential handoff

Choice and option topology -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

102 to 110: consequential handoff

Choice and option topology -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

102 to 111: consequential handoff

Choice and option topology -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

102 to 112: consequential handoff

Choice and option topology -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

102 to 113: consequential handoff

Choice and option topology -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

102 to 114: consequential handoff

Choice and option topology -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

102 to 115: consequential handoff

Choice and option topology -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

102 to 116: consequential handoff

Choice and option topology -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

102 to 117: consequential handoff

Choice and option topology -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

102 to 118: consequential handoff

Choice and option topology -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

102 to 119: consequential handoff

Choice and option topology -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

102 to 120: consequential handoff

Choice and option topology -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Choice and option topology into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Binary free-choice / no-choice label. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Chooser, affected people, institutions and future option set. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective choice-topology intervention' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 768-774 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

102: Choice and option topology

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agency expands while downstream harm and coercive friction fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective choice-topology intervention or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

102: Choice and option topology

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

102: Choice and option topology

Healthcare / care team / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Healthcare / care team. handoff links treatment, safety, continuity, caregiving and costs. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agency expands while downstream harm and coercive friction fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective choice-topology intervention or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agency expands while downstream harm and coercive friction fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective choice-topology intervention or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

102: Choice and option topology

Scientific laboratory / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

Author's native acceptance: Agency expands while downstream harm and coercive friction fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective choice-topology intervention or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Choice and option topology

Digital / AI service / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agency expands while downstream harm and coercive friction fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective choice-topology intervention or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Choice and option topology

Interregional / planetary / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agency expands while downstream harm and coercive friction fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective choice-topology intervention or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Choice and option topology

Interregional / planetary / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agency expands while downstream harm and coercive friction fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

102: Choice and option topology

Interregional / planetary / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agency expands while downstream harm and coercive friction fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective choice-topology intervention or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Choice and option topology

Interregional / planetary / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agency expands while downstream harm and coercive friction fall. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

102: Choice and option topology

Interregional / planetary / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Choice and option topology is described in the Atlas as: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Chooser, affected people, institutions and future option set. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

102: Evidence and source reconstruction

Choice and option topology | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Boundary divergence

Choice and option topology | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

102: Causal diagram and identifiability

Choice and option topology | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

102: Receiving carrier identification

Choice and option topology | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

102: Hidden compensation accounting

Choice and option topology | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Native units and dimensional integrity

Choice and option topology | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Capacity specification

Choice and option topology | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Intervention design

Choice and option topology | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Incumbent parity contest

Choice and option topology | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Time-window and recurrence

Choice and option topology | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Ethical and legal safety

Choice and option topology | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Sensitivity and negative controls

Choice and option topology | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Replication and provenance

Choice and option topology | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

102: Cross-domain invariant contest

Choice and option topology | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 102: Choice and option topology; original author status: Constructive protocol. Native state: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Binary free-choice / no-choice label. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Nominal alternatives exist while executable humane alternatives are absent or prohibitively costly. The relevant receiving carriers are: Chooser, affected people, institutions and future option set.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agency expands while downstream harm and coercive friction fall.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective choice-topology intervention. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 102, pp. 768-774 (Rufino 2026).

Adapter 103: Truth, deception and disclosure

Conscious agency and responsibility | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity

RECORDED RECEIVING SCHEMA

Truth/lie binary detached from consequence topology

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Candidate receivers: Speaker, listener, harmed parties, institutions and future trust network.

EXISTING CAPACITY DESIGN

Verification, safe disclosure, correction, restitution and transition capacity

PROTECTED OUTCOME STATED BY THE AUTHOR

Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Sealed truth-cost / disclosure study. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

103 | Truth, deception and disclosure

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

103 | Truth, deception and disclosure

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

103 | Truth, deception and disclosure

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

103 | Truth, deception and disclosure

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

103 | Truth, deception and disclosure

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

103 | Truth, deception and disclosure

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 103, Truth, deception and disclosure. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Potential direct or institutional human pathway: Truth, deception and disclosure interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Verification, safe disclosure, correction, restitution and transition capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

103 to 001: consequential handoff

Truth, deception and disclosure -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

103 to 002: consequential handoff

Truth, deception and disclosure -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

103 to 003: consequential handoff

Truth, deception and disclosure -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

103 to 004: consequential handoff

Truth, deception and disclosure -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

103 to 005: consequential handoff

Truth, deception and disclosure -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

103 to 006: consequential handoff

Truth, deception and disclosure -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

103 to 007: consequential handoff

Truth, deception and disclosure -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

103 to 008: consequential handoff

Truth, deception and disclosure -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

103 to 009: consequential handoff

Truth, deception and disclosure -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

103 to 010: consequential handoff

Truth, deception and disclosure -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

103 to 011: consequential handoff

Truth, deception and disclosure -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

103 to 012: consequential handoff

Truth, deception and disclosure -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

103 to 013: consequential handoff

Truth, deception and disclosure -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

103 to 014: consequential handoff

Truth, deception and disclosure -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

103 to 015: consequential handoff

Truth, deception and disclosure -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

103 to 016: consequential handoff

Truth, deception and disclosure -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

103 to 017: consequential handoff

Truth, deception and disclosure -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

103 to 018: consequential handoff

Truth, deception and disclosure -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

103 to 019: consequential handoff

Truth, deception and disclosure -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

103 to 020: consequential handoff

Truth, deception and disclosure -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

103 to 021: consequential handoff

Truth, deception and disclosure -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

103 to 022: consequential handoff

Truth, deception and disclosure -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

103 to 023: consequential handoff

Truth, deception and disclosure -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

103 to 024: consequential handoff

Truth, deception and disclosure -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

103 to 025: consequential handoff

Truth, deception and disclosure -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

103 to 026: consequential handoff

Truth, deception and disclosure -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

103 to 027: consequential handoff

Truth, deception and disclosure -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

103 to 028: consequential handoff

Truth, deception and disclosure -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

103 to 029: consequential handoff

Truth, deception and disclosure -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

103 to 030: consequential handoff

Truth, deception and disclosure -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

103 to 031: consequential handoff

Truth, deception and disclosure -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

103 to 032: consequential handoff

Truth, deception and disclosure -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

103 to 033: consequential handoff

Truth, deception and disclosure -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

103 to 034: consequential handoff

Truth, deception and disclosure -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

103 to 035: consequential handoff

Truth, deception and disclosure -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

103 to 036: consequential handoff

Truth, deception and disclosure -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

103 to 037: consequential handoff

Truth, deception and disclosure -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

103 to 038: consequential handoff

Truth, deception and disclosure -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

103 to 039: consequential handoff

Truth, deception and disclosure -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

103 to 040: consequential handoff

Truth, deception and disclosure -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

103 to 041: consequential handoff

Truth, deception and disclosure -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

103 to 042: consequential handoff

Truth, deception and disclosure -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

103 to 043: consequential handoff

Truth, deception and disclosure -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

103 to 044: consequential handoff

Truth, deception and disclosure -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

103 to 045: consequential handoff

Truth, deception and disclosure -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

103 to 046: consequential handoff

Truth, deception and disclosure -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

103 to 047: consequential handoff

Truth, deception and disclosure -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

103 to 048: consequential handoff

Truth, deception and disclosure -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

103 to 049: consequential handoff

Truth, deception and disclosure -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

103 to 050: consequential handoff

Truth, deception and disclosure -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

103 to 051: consequential handoff

Truth, deception and disclosure -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

103 to 052: consequential handoff

Truth, deception and disclosure -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

103 to 053: consequential handoff

Truth, deception and disclosure -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

103 to 054: consequential handoff

Truth, deception and disclosure -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

103 to 055: consequential handoff

Truth, deception and disclosure -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

103 to 056: consequential handoff

Truth, deception and disclosure -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

103 to 057: consequential handoff

Truth, deception and disclosure -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

103 to 058: consequential handoff

Truth, deception and disclosure -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

103 to 059: consequential handoff

Truth, deception and disclosure -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

103 to 060: consequential handoff

Truth, deception and disclosure -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

103 to 061: consequential handoff

Truth, deception and disclosure -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

103 to 062: consequential handoff

Truth, deception and disclosure -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

103 to 063: consequential handoff

Truth, deception and disclosure -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

103 to 064: consequential handoff

Truth, deception and disclosure -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

103 to 065: consequential handoff

Truth, deception and disclosure -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

103 to 066: consequential handoff

Truth, deception and disclosure -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

103 to 067: consequential handoff

Truth, deception and disclosure -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

103 to 068: consequential handoff

Truth, deception and disclosure -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

103 to 069: consequential handoff

Truth, deception and disclosure -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

103 to 070: consequential handoff

Truth, deception and disclosure -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

103 to 071: consequential handoff

Truth, deception and disclosure -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

103 to 072: consequential handoff

Truth, deception and disclosure -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

103 to 073: consequential handoff

Truth, deception and disclosure -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

103 to 074: consequential handoff

Truth, deception and disclosure -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

103 to 075: consequential handoff

Truth, deception and disclosure -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

103 to 076: consequential handoff

Truth, deception and disclosure -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

103 to 077: consequential handoff

Truth, deception and disclosure -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

103 to 078: consequential handoff

Truth, deception and disclosure -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

103 to 079: consequential handoff

Truth, deception and disclosure -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

103 to 080: consequential handoff

Truth, deception and disclosure -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

103 to 081: consequential handoff

Truth, deception and disclosure -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

103 to 082: consequential handoff

Truth, deception and disclosure -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

103 to 083: consequential handoff

Truth, deception and disclosure -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

103 to 084: consequential handoff

Truth, deception and disclosure -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

103 to 085: consequential handoff

Truth, deception and disclosure -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

103 to 086: consequential handoff

Truth, deception and disclosure -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

103 to 087: consequential handoff

Truth, deception and disclosure -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

103 to 088: consequential handoff

Truth, deception and disclosure -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

103 to 089: consequential handoff

Truth, deception and disclosure -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

103 to 090: consequential handoff

Truth, deception and disclosure -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

103 to 091: consequential handoff

Truth, deception and disclosure -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

103 to 092: consequential handoff

Truth, deception and disclosure -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

103 to 093: consequential handoff

Truth, deception and disclosure -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

103 to 094: consequential handoff

Truth, deception and disclosure -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

103 to 095: consequential handoff

Truth, deception and disclosure -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

103 to 096: consequential handoff

Truth, deception and disclosure -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

103 to 097: consequential handoff

Truth, deception and disclosure -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

103 to 098: consequential handoff

Truth, deception and disclosure -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

103 to 099: consequential handoff

Truth, deception and disclosure -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

103 to 100: consequential handoff

Truth, deception and disclosure -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

103 to 101: consequential handoff

Truth, deception and disclosure -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

103 to 102: consequential handoff

Truth, deception and disclosure -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

103 to 103: consequential handoff

Truth, deception and disclosure -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Truth, deception and disclosure becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 775-781; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

103 to 104: consequential handoff

Truth, deception and disclosure -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

103 to 105: consequential handoff

Truth, deception and disclosure -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

103 to 106: consequential handoff

Truth, deception and disclosure -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

103 to 107: consequential handoff

Truth, deception and disclosure -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

103 to 108: consequential handoff

Truth, deception and disclosure -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

103 to 109: consequential handoff

Truth, deception and disclosure -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

103 to 110: consequential handoff

Truth, deception and disclosure -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

103 to 111: consequential handoff

Truth, deception and disclosure -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

103 to 112: consequential handoff

Truth, deception and disclosure -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

103 to 113: consequential handoff

Truth, deception and disclosure -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

103 to 114: consequential handoff

Truth, deception and disclosure -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

103 to 115: consequential handoff

Truth, deception and disclosure -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

103 to 116: consequential handoff

Truth, deception and disclosure -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

103 to 117: consequential handoff

Truth, deception and disclosure -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

103 to 118: consequential handoff

Truth, deception and disclosure -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

103 to 119: consequential handoff

Truth, deception and disclosure -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

103 to 120: consequential handoff

Truth, deception and disclosure -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Truth, deception and disclosure into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Truth/lie binary detached from consequence topology. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Speaker, listener, harmed parties, institutions and future trust network. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Verification, safe disclosure, correction, restitution and transition capacity. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Sealed truth-cost / disclosure study' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 775-781 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

103: Truth, deception and disclosure

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Sealed truth-cost / disclosure study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

103: Truth, deception and disclosure

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Sealed truth-cost / disclosure study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

103: Truth, deception and disclosure

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Sealed truth-cost / disclosure study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

103: Truth, deception and disclosure

Household / family / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

103: Truth, deception and disclosure

Household / family / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Sealed truth-cost / disclosure study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

103: Truth, deception and disclosure

Enterprise / cooperative / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Enterprise / cooperative. handoff links throughput, workers, buyers, capital and governance. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

103: Truth, deception and disclosure

Ecological catchment / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Sealed truth-cost / disclosure study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

103: Truth, deception and disclosure

Ecological catchment / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

103: Truth, deception and disclosure

Scientific laboratory / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Sealed truth-cost / disclosure study or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

103: Truth, deception and disclosure

Digital / AI service / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

103: Truth, deception and disclosure

Digital / AI service / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Truth, deception and disclosure is described in the Atlas as: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Speaker, listener, harmed parties, institutions and future trust network. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Verification, safe disclosure, correction, restitution and transition capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

103: Evidence and source reconstruction

Truth, deception and disclosure | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Verification, safe disclosure, correction, restitution and transition capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers.

RETEST AND SCOPE CONTROL

Candidate decisive method: Sealed truth-cost / disclosure study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

103: Boundary divergence

Truth, deception and disclosure | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

INTERVENTION WHOSE EFFECT MATTERS

103: Causal diagram and identifiability

Truth, deception and disclosure | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

INTERVENTION WHOSE EFFECT MATTERS

103: Receiving carrier identification

Truth, deception and disclosure | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Verification, safe disclosure, correction, restitution and transition capacity. Show a feasible native action rather than restating a goal.

103: Hidden compensation accounting

Truth, deception and disclosure | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Verification, safe disclosure, correction, restitution and transition capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers.

RETEST AND SCOPE CONTROL

Candidate decisive method: Sealed truth-cost / disclosure study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

103: Native units and dimensional integrity

Truth, deception and disclosure | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Verification, safe disclosure, correction, restitution and transition capacity. Show a feasible native action rather than restating a goal.

103: Capacity specification

Truth, deception and disclosure | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Verification, safe disclosure, correction, restitution and transition capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers.

RETEST AND SCOPE CONTROL

Candidate decisive method: Sealed truth-cost / disclosure study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

103: Intervention design

Truth, deception and disclosure | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

103: Incumbent parity contest

Truth, deception and disclosure | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

103: Sensitivity and negative controls

Truth, deception and disclosure | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers.

RETEST AND SCOPE CONTROL

Candidate decisive method: Sealed truth-cost / disclosure study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

103: Cross-domain invariant contest

Truth, deception and disclosure | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 103: Truth, deception and disclosure; original author status: Constructive protocol. Native state: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Truth/lie binary detached from consequence topology. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Truth creates concentrated cost or deception remains locally profitable because receiving capacity is absent. The relevant receiving carriers are: Speaker, listener, harmed parties, institutions and future trust network.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Verification, safe disclosure, correction, restitution and transition capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Fidelity rises while truthful disclosure no longer requires avoidable destruction of material carriers.

RETEST AND SCOPE CONTROL

Candidate decisive method: Sealed truth-cost / disclosure study. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 103, pp. 775-781 (Rufino 2026).

Adapter 104: Responsibility and causal attribution

Conscious agency and responsibility | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement

RECORDED RECEIVING SCHEMA

Moral label detached from the action-producing state

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Responsibility is either erased by context or overstated by ignoring real constraints.
Candidate receivers: Actor, victims, institutions, community and future actors.

EXISTING CAPACITY DESIGN

Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair

PROTECTED OUTCOME STATED BY THE AUTHOR

Attribution, safety, restitution and future agency improve without hiding causal contribution

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Blinded case reconstruction with preregistered causal criteria. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104 | Responsibility and causal attribution

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

104 | Responsibility and causal attribution

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

104 | Responsibility and causal attribution

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

104 | Responsibility and causal attribution

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

104 | Responsibility and causal attribution

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

104 | Responsibility and causal attribution

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 104, Responsibility and causal attribution. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Potential direct or institutional human pathway: Responsibility and causal attribution interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Responsibility is either erased by context or overstated by ignoring real constraints.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Attribution, safety, restitution and future agency improve without hiding causal contribution. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

104 to 001: consequential handoff

Responsibility and causal attribution -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

104 to 002: consequential handoff

Responsibility and causal attribution -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

104 to 003: consequential handoff

Responsibility and causal attribution -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

104 to 004: consequential handoff

Responsibility and causal attribution -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

104 to 005: consequential handoff

Responsibility and causal attribution -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

104 to 006: consequential handoff

Responsibility and causal attribution -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

104 to 007: consequential handoff

Responsibility and causal attribution -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

104 to 008: consequential handoff

Responsibility and causal attribution -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

104 to 009: consequential handoff

Responsibility and causal attribution -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

104 to 010: consequential handoff

Responsibility and causal attribution -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

104 to 011: consequential handoff

Responsibility and causal attribution -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

104 to 012: consequential handoff

Responsibility and causal attribution -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

104 to 013: consequential handoff

Responsibility and causal attribution -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

104 to 014: consequential handoff

Responsibility and causal attribution -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

104 to 015: consequential handoff

Responsibility and causal attribution -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

104 to 016: consequential handoff

Responsibility and causal attribution -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

104 to 017: consequential handoff

Responsibility and causal attribution -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

104 to 018: consequential handoff

Responsibility and causal attribution -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

104 to 019: consequential handoff

Responsibility and causal attribution -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

104 to 020: consequential handoff

Responsibility and causal attribution -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

104 to 021: consequential handoff

Responsibility and causal attribution -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

104 to 022: consequential handoff

Responsibility and causal attribution -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

104 to 023: consequential handoff

Responsibility and causal attribution -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

104 to 024: consequential handoff

Responsibility and causal attribution -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

104 to 025: consequential handoff

Responsibility and causal attribution -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

104 to 026: consequential handoff

Responsibility and causal attribution -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

104 to 027: consequential handoff

Responsibility and causal attribution -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

104 to 028: consequential handoff

Responsibility and causal attribution -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

104 to 029: consequential handoff

Responsibility and causal attribution -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

104 to 030: consequential handoff

Responsibility and causal attribution -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

104 to 031: consequential handoff

Responsibility and causal attribution -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

104 to 032: consequential handoff

Responsibility and causal attribution -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

104 to 033: consequential handoff

Responsibility and causal attribution -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

104 to 034: consequential handoff

Responsibility and causal attribution -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

104 to 035: consequential handoff

Responsibility and causal attribution -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

104 to 036: consequential handoff

Responsibility and causal attribution -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

104 to 037: consequential handoff

Responsibility and causal attribution -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

104 to 038: consequential handoff

Responsibility and causal attribution -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

104 to 039: consequential handoff

Responsibility and causal attribution -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

104 to 040: consequential handoff

Responsibility and causal attribution -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

104 to 041: consequential handoff

Responsibility and causal attribution -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

104 to 042: consequential handoff

Responsibility and causal attribution -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

104 to 043: consequential handoff

Responsibility and causal attribution -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

104 to 044: consequential handoff

Responsibility and causal attribution -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

104 to 045: consequential handoff

Responsibility and causal attribution -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

104 to 046: consequential handoff

Responsibility and causal attribution -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

104 to 047: consequential handoff

Responsibility and causal attribution -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

104 to 048: consequential handoff

Responsibility and causal attribution -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

104 to 049: consequential handoff

Responsibility and causal attribution -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

104 to 050: consequential handoff

Responsibility and causal attribution -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

104 to 051: consequential handoff

Responsibility and causal attribution -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

104 to 052: consequential handoff

Responsibility and causal attribution -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

104 to 053: consequential handoff

Responsibility and causal attribution -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

104 to 054: consequential handoff

Responsibility and causal attribution -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

104 to 055: consequential handoff

Responsibility and causal attribution -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

104 to 056: consequential handoff

Responsibility and causal attribution -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

104 to 057: consequential handoff

Responsibility and causal attribution -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

104 to 058: consequential handoff

Responsibility and causal attribution -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

104 to 059: consequential handoff

Responsibility and causal attribution -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

104 to 060: consequential handoff

Responsibility and causal attribution -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

104 to 061: consequential handoff

Responsibility and causal attribution -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

104 to 062: consequential handoff

Responsibility and causal attribution -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

104 to 063: consequential handoff

Responsibility and causal attribution -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

104 to 064: consequential handoff

Responsibility and causal attribution -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

104 to 065: consequential handoff

Responsibility and causal attribution -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

104 to 066: consequential handoff

Responsibility and causal attribution -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

104 to 067: consequential handoff

Responsibility and causal attribution -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

104 to 068: consequential handoff

Responsibility and causal attribution -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

104 to 069: consequential handoff

Responsibility and causal attribution -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

104 to 070: consequential handoff

Responsibility and causal attribution -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

104 to 071: consequential handoff

Responsibility and causal attribution -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

104 to 072: consequential handoff

Responsibility and causal attribution -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

104 to 073: consequential handoff

Responsibility and causal attribution -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

104 to 074: consequential handoff

Responsibility and causal attribution -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

104 to 075: consequential handoff

Responsibility and causal attribution -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

104 to 076: consequential handoff

Responsibility and causal attribution -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

104 to 077: consequential handoff

Responsibility and causal attribution -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

104 to 078: consequential handoff

Responsibility and causal attribution -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

104 to 079: consequential handoff

Responsibility and causal attribution -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

104 to 080: consequential handoff

Responsibility and causal attribution -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

104 to 081: consequential handoff

Responsibility and causal attribution -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

104 to 082: consequential handoff

Responsibility and causal attribution -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

104 to 083: consequential handoff

Responsibility and causal attribution -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

104 to 084: consequential handoff

Responsibility and causal attribution -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

104 to 085: consequential handoff

Responsibility and causal attribution -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

104 to 086: consequential handoff

Responsibility and causal attribution -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

104 to 087: consequential handoff

Responsibility and causal attribution -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

104 to 088: consequential handoff

Responsibility and causal attribution -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

104 to 089: consequential handoff

Responsibility and causal attribution -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

104 to 090: consequential handoff

Responsibility and causal attribution -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

104 to 091: consequential handoff

Responsibility and causal attribution -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

104 to 092: consequential handoff

Responsibility and causal attribution -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

104 to 093: consequential handoff

Responsibility and causal attribution -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

104 to 094: consequential handoff

Responsibility and causal attribution -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

104 to 095: consequential handoff

Responsibility and causal attribution -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

104 to 096: consequential handoff

Responsibility and causal attribution -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

104 to 097: consequential handoff

Responsibility and causal attribution -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

104 to 098: consequential handoff

Responsibility and causal attribution -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

104 to 099: consequential handoff

Responsibility and causal attribution -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

104 to 100: consequential handoff

Responsibility and causal attribution -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

104 to 101: consequential handoff

Responsibility and causal attribution -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

104 to 102: consequential handoff

Responsibility and causal attribution -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

104 to 103: consequential handoff

Responsibility and causal attribution -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

104 to 104: consequential handoff

Responsibility and causal attribution -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Responsibility and causal attribution becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 782-788; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

104 to 105: consequential handoff

Responsibility and causal attribution -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

104 to 106: consequential handoff

Responsibility and causal attribution -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

104 to 107: consequential handoff

Responsibility and causal attribution -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

104 to 108: consequential handoff

Responsibility and causal attribution -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

104 to 109: consequential handoff

Responsibility and causal attribution -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

104 to 110: consequential handoff

Responsibility and causal attribution -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

104 to 111: consequential handoff

Responsibility and causal attribution -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

104 to 112: consequential handoff

Responsibility and causal attribution -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

104 to 113: consequential handoff

Responsibility and causal attribution -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

104 to 114: consequential handoff

Responsibility and causal attribution -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

104 to 115: consequential handoff

Responsibility and causal attribution -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

104 to 116: consequential handoff

Responsibility and causal attribution -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

104 to 117: consequential handoff

Responsibility and causal attribution -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

104 to 118: consequential handoff

Responsibility and causal attribution -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

104 to 119: consequential handoff

Responsibility and causal attribution -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

104 to 120: consequential handoff

Responsibility and causal attribution -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Responsibility and causal attribution into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Moral label detached from the action-producing state. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Actor, victims, institutions, community and future actors. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Blinded case reconstruction with preregistered causal criteria' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 782-788 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

104: Responsibility and causal attribution

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Responsibility and causal attribution

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Responsibility and causal attribution

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Responsibility and causal attribution

Household / family / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Responsibility and causal attribution

Household / family / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

104: Responsibility and causal attribution

Household / family / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

104: Responsibility and causal attribution

Enterprise / cooperative / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Enterprise / cooperative. handoff links throughput, workers, buyers, capital and governance. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

104: Responsibility and causal attribution

Local government / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

104: Responsibility and causal attribution

Public infrastructure / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Responsibility and causal attribution

Interregional / planetary / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Responsibility and causal attribution is described in the Atlas as: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Responsibility is either erased by context or overstated by ignoring real constraints. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Actor, victims, institutions, community and future actors. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Attribution, safety, restitution and future agency improve without hiding causal contribution. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Blinded case reconstruction with preregistered causal criteria or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Evidence and source reconstruction

Responsibility and causal attribution | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Boundary divergence

Responsibility and causal attribution | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Causal diagram and identifiability

Responsibility and causal attribution | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Receiving carrier identification

Responsibility and causal attribution | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Hidden compensation accounting

Responsibility and causal attribution | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Native units and dimensional integrity

Responsibility and causal attribution | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Capacity specification

Responsibility and causal attribution | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Intervention design

Responsibility and causal attribution | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Incumbent parity contest

Responsibility and causal attribution | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Time-window and recurrence

Responsibility and causal attribution | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Ethical and legal safety

Responsibility and causal attribution | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Sensitivity and negative controls

Responsibility and causal attribution | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Replication and provenance

Responsibility and causal attribution | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

104: Cross-domain invariant contest

Responsibility and causal attribution | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 104: Responsibility and causal attribution; original author status: High-stakes protocol. Native state: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Moral label detached from the action-producing state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Responsibility is either erased by context or overstated by ignoring real constraints. The relevant receiving carriers are: Actor, victims, institutions, community and future actors.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Attribution, safety, restitution and future agency improve without hiding causal contribution.

RETEST AND SCOPE CONTROL

Candidate decisive method: Blinded case reconstruction with preregistered causal criteria. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 104, pp. 782-788 (Rufino 2026).

Adapter 105: Consent, coercion and autonomy

Conscious agency and responsibility | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity

RECORDED RECEIVING SCHEMA

Signed/expressed consent treated as sufficient state

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Candidate receivers: Decision maker, counterparties, dependents and future self.

EXISTING CAPACITY DESIGN

Real exit, recourse, reversible consent, information symmetry and alternative capacity

PROTECTED OUTCOME STATED BY THE AUTHOR

Agreement quality and autonomy rise together while coercive burden falls

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Prospective consent-quality audit. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105 | Consent, coercion and autonomy

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 105, Consent, coercion and autonomy. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Potential direct or institutional human pathway: Consent, coercion and autonomy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Apparent agreement is purchased by narrowed alternatives or irreversible dependency.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK
