Investigate whether Real exit, recourse, reversible consent, information symmetry and alternative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agreement quality and autonomy rise together while coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

105 | Consent, coercion and autonomy

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 105, Consent, coercion and autonomy. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Potential direct or institutional human pathway: Consent, coercion and autonomy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Apparent agreement is purchased by narrowed alternatives or irreversible dependency.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Real exit, recourse, reversible consent, information symmetry and alternative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agreement quality and autonomy rise together while coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

105 | Consent, coercion and autonomy

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 105, Consent, coercion and autonomy. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Potential direct or institutional human pathway: Consent, coercion and autonomy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Apparent agreement is purchased by narrowed alternatives or irreversible dependency.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Real exit, recourse, reversible consent, information symmetry and alternative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agreement quality and autonomy rise together while coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

105 | Consent, coercion and autonomy

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 105, Consent, coercion and autonomy. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Potential direct or institutional human pathway: Consent, coercion and autonomy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Apparent agreement is purchased by narrowed alternatives or irreversible dependency.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Real exit, recourse, reversible consent, information symmetry and alternative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agreement quality and autonomy rise together while coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

105 | Consent, coercion and autonomy

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 105, Consent, coercion and autonomy. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Potential direct or institutional human pathway: Consent, coercion and autonomy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Apparent agreement is purchased by narrowed alternatives or irreversible dependency.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Real exit, recourse, reversible consent, information symmetry and alternative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agreement quality and autonomy rise together while coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

105 | Consent, coercion and autonomy

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 105, Consent, coercion and autonomy. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Potential direct or institutional human pathway: Consent, coercion and autonomy interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Apparent agreement is purchased by narrowed alternatives or irreversible dependency.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Real exit, recourse, reversible consent, information symmetry and alternative capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Agreement quality and autonomy rise together while coercive burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

105 to 001: consequential handoff

Consent, coercion and autonomy -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

105 to 002: consequential handoff

Consent, coercion and autonomy -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

105 to 003: consequential handoff

Consent, coercion and autonomy -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

105 to 004: consequential handoff

Consent, coercion and autonomy -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

105 to 005: consequential handoff

Consent, coercion and autonomy -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

105 to 006: consequential handoff

Consent, coercion and autonomy -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

105 to 007: consequential handoff

Consent, coercion and autonomy -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

105 to 008: consequential handoff

Consent, coercion and autonomy -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

105 to 009: consequential handoff

Consent, coercion and autonomy -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

105 to 010: consequential handoff

Consent, coercion and autonomy -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

105 to 011: consequential handoff

Consent, coercion and autonomy -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

105 to 012: consequential handoff

Consent, coercion and autonomy -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

105 to 013: consequential handoff

Consent, coercion and autonomy -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

105 to 014: consequential handoff

Consent, coercion and autonomy -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

105 to 015: consequential handoff

Consent, coercion and autonomy -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

105 to 016: consequential handoff

Consent, coercion and autonomy -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

105 to 017: consequential handoff

Consent, coercion and autonomy -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

105 to 018: consequential handoff

Consent, coercion and autonomy -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

105 to 019: consequential handoff

Consent, coercion and autonomy -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

105 to 020: consequential handoff

Consent, coercion and autonomy -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

105 to 021: consequential handoff

Consent, coercion and autonomy -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

105 to 022: consequential handoff

Consent, coercion and autonomy -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

105 to 023: consequential handoff

Consent, coercion and autonomy -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

105 to 024: consequential handoff

Consent, coercion and autonomy -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

105 to 025: consequential handoff

Consent, coercion and autonomy -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

105 to 026: consequential handoff

Consent, coercion and autonomy -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

105 to 027: consequential handoff

Consent, coercion and autonomy -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

105 to 028: consequential handoff

Consent, coercion and autonomy -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

105 to 029: consequential handoff

Consent, coercion and autonomy -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

105 to 030: consequential handoff

Consent, coercion and autonomy -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

105 to 031: consequential handoff

Consent, coercion and autonomy -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

105 to 032: consequential handoff

Consent, coercion and autonomy -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

105 to 033: consequential handoff

Consent, coercion and autonomy -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

105 to 034: consequential handoff

Consent, coercion and autonomy -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

105 to 035: consequential handoff

Consent, coercion and autonomy -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

105 to 036: consequential handoff

Consent, coercion and autonomy -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

105 to 037: consequential handoff

Consent, coercion and autonomy -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

105 to 038: consequential handoff

Consent, coercion and autonomy -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

105 to 039: consequential handoff

Consent, coercion and autonomy -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

105 to 040: consequential handoff

Consent, coercion and autonomy -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

105 to 041: consequential handoff

Consent, coercion and autonomy -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

105 to 042: consequential handoff

Consent, coercion and autonomy -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

105 to 043: consequential handoff

Consent, coercion and autonomy -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

105 to 044: consequential handoff

Consent, coercion and autonomy -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

105 to 045: consequential handoff

Consent, coercion and autonomy -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

105 to 046: consequential handoff

Consent, coercion and autonomy -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

105 to 047: consequential handoff

Consent, coercion and autonomy -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

105 to 048: consequential handoff

Consent, coercion and autonomy -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

105 to 049: consequential handoff

Consent, coercion and autonomy -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

105 to 050: consequential handoff

Consent, coercion and autonomy -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

105 to 051: consequential handoff

Consent, coercion and autonomy -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

105 to 052: consequential handoff

Consent, coercion and autonomy -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

105 to 053: consequential handoff

Consent, coercion and autonomy -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

105 to 054: consequential handoff

Consent, coercion and autonomy -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

105 to 055: consequential handoff

Consent, coercion and autonomy -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

105 to 056: consequential handoff

Consent, coercion and autonomy -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

105 to 057: consequential handoff

Consent, coercion and autonomy -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

105 to 058: consequential handoff

Consent, coercion and autonomy -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

105 to 059: consequential handoff

Consent, coercion and autonomy -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

105 to 060: consequential handoff

Consent, coercion and autonomy -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

105 to 061: consequential handoff

Consent, coercion and autonomy -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

105 to 062: consequential handoff

Consent, coercion and autonomy -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

105 to 063: consequential handoff

Consent, coercion and autonomy -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

105 to 064: consequential handoff

Consent, coercion and autonomy -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

105 to 065: consequential handoff

Consent, coercion and autonomy -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

105 to 066: consequential handoff

Consent, coercion and autonomy -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

105 to 067: consequential handoff

Consent, coercion and autonomy -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

105 to 068: consequential handoff

Consent, coercion and autonomy -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

105 to 069: consequential handoff

Consent, coercion and autonomy -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

105 to 070: consequential handoff

Consent, coercion and autonomy -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

105 to 071: consequential handoff

Consent, coercion and autonomy -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

105 to 072: consequential handoff

Consent, coercion and autonomy -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

105 to 073: consequential handoff

Consent, coercion and autonomy -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

105 to 074: consequential handoff

Consent, coercion and autonomy -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

105 to 075: consequential handoff

Consent, coercion and autonomy -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

105 to 076: consequential handoff

Consent, coercion and autonomy -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

105 to 077: consequential handoff

Consent, coercion and autonomy -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

105 to 078: consequential handoff

Consent, coercion and autonomy -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

105 to 079: consequential handoff

Consent, coercion and autonomy -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

105 to 080: consequential handoff

Consent, coercion and autonomy -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

105 to 081: consequential handoff

Consent, coercion and autonomy -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

105 to 082: consequential handoff

Consent, coercion and autonomy -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

105 to 083: consequential handoff

Consent, coercion and autonomy -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

105 to 084: consequential handoff

Consent, coercion and autonomy -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

105 to 085: consequential handoff

Consent, coercion and autonomy -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

105 to 086: consequential handoff

Consent, coercion and autonomy -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

105 to 087: consequential handoff

Consent, coercion and autonomy -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

105 to 088: consequential handoff

Consent, coercion and autonomy -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

105 to 089: consequential handoff

Consent, coercion and autonomy -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

105 to 090: consequential handoff

Consent, coercion and autonomy -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

105 to 091: consequential handoff

Consent, coercion and autonomy -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

105 to 092: consequential handoff

Consent, coercion and autonomy -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

105 to 093: consequential handoff

Consent, coercion and autonomy -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

105 to 094: consequential handoff

Consent, coercion and autonomy -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

105 to 095: consequential handoff

Consent, coercion and autonomy -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

105 to 096: consequential handoff

Consent, coercion and autonomy -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

105 to 097: consequential handoff

Consent, coercion and autonomy -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

105 to 098: consequential handoff

Consent, coercion and autonomy -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

105 to 099: consequential handoff

Consent, coercion and autonomy -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

105 to 100: consequential handoff

Consent, coercion and autonomy -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

105 to 101: consequential handoff

Consent, coercion and autonomy -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

105 to 102: consequential handoff

Consent, coercion and autonomy -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

105 to 103: consequential handoff

Consent, coercion and autonomy -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

105 to 104: consequential handoff

Consent, coercion and autonomy -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

105 to 105: consequential handoff

Consent, coercion and autonomy -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Consent, coercion and autonomy becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 789-795; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

105 to 106: consequential handoff

Consent, coercion and autonomy -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

105 to 107: consequential handoff

Consent, coercion and autonomy -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

105 to 108: consequential handoff

Consent, coercion and autonomy -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

105 to 109: consequential handoff

Consent, coercion and autonomy -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

105 to 110: consequential handoff

Consent, coercion and autonomy -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

105 to 111: consequential handoff

Consent, coercion and autonomy -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

105 to 112: consequential handoff

Consent, coercion and autonomy -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

105 to 113: consequential handoff

Consent, coercion and autonomy -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

105 to 114: consequential handoff

Consent, coercion and autonomy -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

105 to 115: consequential handoff

Consent, coercion and autonomy -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

105 to 116: consequential handoff

Consent, coercion and autonomy -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

105 to 117: consequential handoff

Consent, coercion and autonomy -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

105 to 118: consequential handoff

Consent, coercion and autonomy -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

105 to 119: consequential handoff

Consent, coercion and autonomy -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

105 to 120: consequential handoff

Consent, coercion and autonomy -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Consent, coercion and autonomy into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Signed/expressed consent treated as sufficient state. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Decision maker, counterparties, dependents and future self. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective consent-quality audit' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 789-795 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

105: Consent, coercion and autonomy

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Consent, coercion and autonomy is described in the Atlas as: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective consent-quality audit or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Consent, coercion and autonomy

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Consent, coercion and autonomy is described in the Atlas as: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective consent-quality audit or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

105: Consent, coercion and autonomy

Healthcare / care team / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Healthcare / care team. handoff links treatment, safety, continuity, caregiving and costs. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Consent, coercion and autonomy is described in the Atlas as: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective consent-quality audit or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

105: Consent, coercion and autonomy

Scientific laboratory / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Consent, coercion and autonomy is described in the Atlas as: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Consent, coercion and autonomy is described in the Atlas as: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective consent-quality audit or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Consent, coercion and autonomy

Interregional / planetary / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Consent, coercion and autonomy is described in the Atlas as: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective consent-quality audit or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Consent, coercion and autonomy

Interregional / planetary / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Consent, coercion and autonomy is described in the Atlas as: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective consent-quality audit or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Consent, coercion and autonomy

Interregional / planetary / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Consent, coercion and autonomy is described in the Atlas as: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Prospective consent-quality audit or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Consent, coercion and autonomy

Interregional / planetary / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Consent, coercion and autonomy is described in the Atlas as: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Apparent agreement is purchased by narrowed alternatives or irreversible dependency. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Decision maker, counterparties, dependents and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Agreement quality and autonomy rise together while coercive burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

105: Evidence and source reconstruction

Consent, coercion and autonomy | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Boundary divergence

Consent, coercion and autonomy | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Causal diagram and identifiability

Consent, coercion and autonomy | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Receiving carrier identification

Consent, coercion and autonomy | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Hidden compensation accounting

Consent, coercion and autonomy | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Native units and dimensional integrity

Consent, coercion and autonomy | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Capacity specification

Consent, coercion and autonomy | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Intervention design

Consent, coercion and autonomy | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Incumbent parity contest

Consent, coercion and autonomy | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Time-window and recurrence

Consent, coercion and autonomy | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Ethical and legal safety

Consent, coercion and autonomy | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Sensitivity and negative controls

Consent, coercion and autonomy | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Replication and provenance

Consent, coercion and autonomy | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

105: Cross-domain invariant contest

Consent, coercion and autonomy | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 105: Consent, coercion and autonomy; original author status: High-stakes protocol. Native state: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Signed/expressed consent treated as sufficient state. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Apparent agreement is purchased by narrowed alternatives or irreversible dependency. The relevant receiving carriers are: Decision maker, counterparties, dependents and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Agreement quality and autonomy rise together while coercive burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Prospective consent-quality audit. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 105, pp. 789-795 (Rufino 2026).

Adapter 106: Addiction, compulsion and short-horizon relief

Conscious agency and responsibility | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set

RECORDED RECEIVING SCHEMA

Substance/behavior category or abstinence binary

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Candidate receivers: Person, body, relationships, household, community and future self.

EXISTING CAPACITY DESIGN

Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden

PROTECTED OUTCOME STATED BY THE AUTHOR

Relief, agency, health and social function improve while dependency burden falls

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Longitudinal regulated intervention with multi-carrier outcomes. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106 | Addiction, compulsion and short-horizon relief

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

106 | Addiction, compulsion and short-horizon relief

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

106 | Addiction, compulsion and short-horizon relief

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

106 | Addiction, compulsion and short-horizon relief

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

106 | Addiction, compulsion and short-horizon relief

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

106 | Addiction, compulsion and short-horizon relief

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 106, Addiction, compulsion and short-horizon relief. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Potential direct or institutional human pathway: Addiction, compulsion and short-horizon relief interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Relief, agency, health and social function improve while dependency burden falls. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

106 to 001: consequential handoff

Addiction, compulsion and short-horizon relief -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

106 to 002: consequential handoff

Addiction, compulsion and short-horizon relief -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

106 to 003: consequential handoff

Addiction, compulsion and short-horizon relief -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

106 to 004: consequential handoff

Addiction, compulsion and short-horizon relief -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

106 to 005: consequential handoff

Addiction, compulsion and short-horizon relief -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

106 to 006: consequential handoff

Addiction, compulsion and short-horizon relief -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

106 to 007: consequential handoff

Addiction, compulsion and short-horizon relief -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

106 to 008: consequential handoff

Addiction, compulsion and short-horizon relief -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

106 to 009: consequential handoff

Addiction, compulsion and short-horizon relief -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

106 to 010: consequential handoff

Addiction, compulsion and short-horizon relief -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

106 to 011: consequential handoff

Addiction, compulsion and short-horizon relief -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

106 to 012: consequential handoff

Addiction, compulsion and short-horizon relief -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

106 to 013: consequential handoff

Addiction, compulsion and short-horizon relief -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

106 to 014: consequential handoff

Addiction, compulsion and short-horizon relief -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

106 to 015: consequential handoff

Addiction, compulsion and short-horizon relief -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

106 to 016: consequential handoff

Addiction, compulsion and short-horizon relief -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

106 to 017: consequential handoff

Addiction, compulsion and short-horizon relief -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

106 to 018: consequential handoff

Addiction, compulsion and short-horizon relief -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

106 to 019: consequential handoff

Addiction, compulsion and short-horizon relief -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

106 to 020: consequential handoff

Addiction, compulsion and short-horizon relief -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

106 to 021: consequential handoff

Addiction, compulsion and short-horizon relief -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

106 to 022: consequential handoff

Addiction, compulsion and short-horizon relief -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

106 to 023: consequential handoff

Addiction, compulsion and short-horizon relief -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

106 to 024: consequential handoff

Addiction, compulsion and short-horizon relief -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

106 to 025: consequential handoff

Addiction, compulsion and short-horizon relief -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

106 to 026: consequential handoff

Addiction, compulsion and short-horizon relief -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

106 to 027: consequential handoff

Addiction, compulsion and short-horizon relief -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

106 to 028: consequential handoff

Addiction, compulsion and short-horizon relief -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

106 to 029: consequential handoff

Addiction, compulsion and short-horizon relief -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

106 to 030: consequential handoff

Addiction, compulsion and short-horizon relief -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

106 to 031: consequential handoff

Addiction, compulsion and short-horizon relief -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

106 to 032: consequential handoff

Addiction, compulsion and short-horizon relief -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

106 to 033: consequential handoff

Addiction, compulsion and short-horizon relief -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

106 to 034: consequential handoff

Addiction, compulsion and short-horizon relief -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

106 to 035: consequential handoff

Addiction, compulsion and short-horizon relief -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

106 to 036: consequential handoff

Addiction, compulsion and short-horizon relief -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

106 to 037: consequential handoff

Addiction, compulsion and short-horizon relief -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

106 to 038: consequential handoff

Addiction, compulsion and short-horizon relief -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

106 to 039: consequential handoff

Addiction, compulsion and short-horizon relief -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

106 to 040: consequential handoff

Addiction, compulsion and short-horizon relief -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

106 to 041: consequential handoff

Addiction, compulsion and short-horizon relief -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

106 to 042: consequential handoff

Addiction, compulsion and short-horizon relief -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

106 to 043: consequential handoff

Addiction, compulsion and short-horizon relief -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

106 to 044: consequential handoff

Addiction, compulsion and short-horizon relief -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

106 to 045: consequential handoff

Addiction, compulsion and short-horizon relief -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

106 to 046: consequential handoff

Addiction, compulsion and short-horizon relief -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

106 to 047: consequential handoff

Addiction, compulsion and short-horizon relief -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

106 to 048: consequential handoff

Addiction, compulsion and short-horizon relief -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

106 to 049: consequential handoff

Addiction, compulsion and short-horizon relief -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

106 to 050: consequential handoff

Addiction, compulsion and short-horizon relief -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

106 to 051: consequential handoff

Addiction, compulsion and short-horizon relief -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

106 to 052: consequential handoff

Addiction, compulsion and short-horizon relief -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

106 to 053: consequential handoff

Addiction, compulsion and short-horizon relief -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

106 to 054: consequential handoff

Addiction, compulsion and short-horizon relief -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

106 to 055: consequential handoff

Addiction, compulsion and short-horizon relief -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

106 to 056: consequential handoff

Addiction, compulsion and short-horizon relief -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

106 to 057: consequential handoff

Addiction, compulsion and short-horizon relief -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

106 to 058: consequential handoff

Addiction, compulsion and short-horizon relief -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

106 to 059: consequential handoff

Addiction, compulsion and short-horizon relief -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

106 to 060: consequential handoff

Addiction, compulsion and short-horizon relief -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

106 to 061: consequential handoff

Addiction, compulsion and short-horizon relief -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

106 to 062: consequential handoff

Addiction, compulsion and short-horizon relief -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

106 to 063: consequential handoff

Addiction, compulsion and short-horizon relief -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

106 to 064: consequential handoff

Addiction, compulsion and short-horizon relief -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

106 to 065: consequential handoff

Addiction, compulsion and short-horizon relief -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

106 to 066: consequential handoff

Addiction, compulsion and short-horizon relief -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

106 to 067: consequential handoff

Addiction, compulsion and short-horizon relief -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

106 to 068: consequential handoff

Addiction, compulsion and short-horizon relief -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

106 to 069: consequential handoff

Addiction, compulsion and short-horizon relief -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

106 to 070: consequential handoff

Addiction, compulsion and short-horizon relief -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

106 to 071: consequential handoff

Addiction, compulsion and short-horizon relief -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

106 to 072: consequential handoff

Addiction, compulsion and short-horizon relief -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

106 to 073: consequential handoff

Addiction, compulsion and short-horizon relief -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

106 to 074: consequential handoff

Addiction, compulsion and short-horizon relief -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

106 to 075: consequential handoff

Addiction, compulsion and short-horizon relief -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

106 to 076: consequential handoff

Addiction, compulsion and short-horizon relief -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

106 to 077: consequential handoff

Addiction, compulsion and short-horizon relief -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

106 to 078: consequential handoff

Addiction, compulsion and short-horizon relief -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

106 to 079: consequential handoff

Addiction, compulsion and short-horizon relief -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

106 to 080: consequential handoff

Addiction, compulsion and short-horizon relief -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

106 to 081: consequential handoff

Addiction, compulsion and short-horizon relief -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

106 to 082: consequential handoff

Addiction, compulsion and short-horizon relief -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

106 to 083: consequential handoff

Addiction, compulsion and short-horizon relief -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

106 to 084: consequential handoff

Addiction, compulsion and short-horizon relief -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

106 to 085: consequential handoff

Addiction, compulsion and short-horizon relief -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

106 to 086: consequential handoff

Addiction, compulsion and short-horizon relief -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

106 to 087: consequential handoff

Addiction, compulsion and short-horizon relief -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

106 to 088: consequential handoff

Addiction, compulsion and short-horizon relief -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

106 to 089: consequential handoff

Addiction, compulsion and short-horizon relief -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

106 to 090: consequential handoff

Addiction, compulsion and short-horizon relief -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

106 to 091: consequential handoff

Addiction, compulsion and short-horizon relief -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

106 to 092: consequential handoff

Addiction, compulsion and short-horizon relief -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

106 to 093: consequential handoff

Addiction, compulsion and short-horizon relief -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

106 to 094: consequential handoff

Addiction, compulsion and short-horizon relief -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

106 to 095: consequential handoff

Addiction, compulsion and short-horizon relief -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

106 to 096: consequential handoff

Addiction, compulsion and short-horizon relief -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

106 to 097: consequential handoff

Addiction, compulsion and short-horizon relief -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

106 to 098: consequential handoff

Addiction, compulsion and short-horizon relief -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

106 to 099: consequential handoff

Addiction, compulsion and short-horizon relief -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

106 to 100: consequential handoff

Addiction, compulsion and short-horizon relief -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

106 to 101: consequential handoff

Addiction, compulsion and short-horizon relief -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

106 to 102: consequential handoff

Addiction, compulsion and short-horizon relief -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

106 to 103: consequential handoff

Addiction, compulsion and short-horizon relief -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

106 to 104: consequential handoff

Addiction, compulsion and short-horizon relief -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

106 to 105: consequential handoff

Addiction, compulsion and short-horizon relief -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

106 to 106: consequential handoff

Addiction, compulsion and short-horizon relief -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Addiction, compulsion and short-horizon relief becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 796-802; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

106 to 107: consequential handoff

Addiction, compulsion and short-horizon relief -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

106 to 108: consequential handoff

Addiction, compulsion and short-horizon relief -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

106 to 109: consequential handoff

Addiction, compulsion and short-horizon relief -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

106 to 110: consequential handoff

Addiction, compulsion and short-horizon relief -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

106 to 111: consequential handoff

Addiction, compulsion and short-horizon relief -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

106 to 112: consequential handoff

Addiction, compulsion and short-horizon relief -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

106 to 113: consequential handoff

Addiction, compulsion and short-horizon relief -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

106 to 114: consequential handoff

Addiction, compulsion and short-horizon relief -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

106 to 115: consequential handoff

Addiction, compulsion and short-horizon relief -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

106 to 116: consequential handoff

Addiction, compulsion and short-horizon relief -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

106 to 117: consequential handoff

Addiction, compulsion and short-horizon relief -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

106 to 118: consequential handoff

Addiction, compulsion and short-horizon relief -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

106 to 119: consequential handoff

Addiction, compulsion and short-horizon relief -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

106 to 120: consequential handoff

Addiction, compulsion and short-horizon relief -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Addiction, compulsion and short-horizon relief into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Substance/behavior category or abstinence binary. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Person, body, relationships, household, community and future self. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal regulated intervention with multi-carrier outcomes' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 796-802 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

106: Addiction, compulsion and short-horizon relief

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal regulated intervention with multi-carrier outcomes or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Addiction, compulsion and short-horizon relief

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal regulated intervention with multi-carrier outcomes or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Addiction, compulsion and short-horizon relief

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal regulated intervention with multi-carrier outcomes or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Addiction, compulsion and short-horizon relief

Household / family / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal regulated intervention with multi-carrier outcomes or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

106: Addiction, compulsion and short-horizon relief

Household / family / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

106: Addiction, compulsion and short-horizon relief

Household / family / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

106: Addiction, compulsion and short-horizon relief

School / university / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal regulated intervention with multi-carrier outcomes or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

106: Addiction, compulsion and short-horizon relief

School / university / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

106: Addiction, compulsion and short-horizon relief

Enterprise / cooperative / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Enterprise / cooperative. handoff links throughput, workers, buyers, capital and governance. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal regulated intervention with multi-carrier outcomes or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

106: Addiction, compulsion and short-horizon relief

Local government / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Local government / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Local government. handoff links service eligibility, public resources and excluded residents. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

Ecological catchment / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal regulated intervention with multi-carrier outcomes or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

106: Addiction, compulsion and short-horizon relief

Public infrastructure / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Addiction, compulsion and short-horizon relief is described in the Atlas as: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Person, body, relationships, household, community and future self. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Relief, agency, health and social function improve while dependency burden falls. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal regulated intervention with multi-carrier outcomes or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

106: Evidence and source reconstruction

Addiction, compulsion and short-horizon relief | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Boundary divergence

Addiction, compulsion and short-horizon relief | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Causal diagram and identifiability

Addiction, compulsion and short-horizon relief | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Receiving carrier identification

Addiction, compulsion and short-horizon relief | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Hidden compensation accounting

Addiction, compulsion and short-horizon relief | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Native units and dimensional integrity

Addiction, compulsion and short-horizon relief | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Capacity specification

Addiction, compulsion and short-horizon relief | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Intervention design

Addiction, compulsion and short-horizon relief | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Incumbent parity contest

Addiction, compulsion and short-horizon relief | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Time-window and recurrence

Addiction, compulsion and short-horizon relief | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Ethical and legal safety

Addiction, compulsion and short-horizon relief | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Sensitivity and negative controls

Addiction, compulsion and short-horizon relief | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Replication and provenance

Addiction, compulsion and short-horizon relief | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

106: Cross-domain invariant contest

Addiction, compulsion and short-horizon relief | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 106: Addiction, compulsion and short-horizon relief; original author status: Regulated empirical frontier. Native state: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Substance/behavior category or abstinence binary. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: A behavior successfully absorbs immediate burden while narrowing future agency and exporting cost. The relevant receiving carriers are: Person, body, relationships, household, community and future self.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Relief, agency, health and social function improve while dependency burden falls.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal regulated intervention with multi-carrier outcomes. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 106, pp. 796-802 (Rufino 2026).

Adapter 107: Crime, violence and reconciliation

Conscious agency and responsibility | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm

RECORDED RECEIVING SCHEMA

Offense label or actor-only risk score

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Candidate receivers: Victims, actor, families, community, institutions and future potential victims.

EXISTING CAPACITY DESIGN

Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger

PROTECTED OUTCOME STATED BY THE AUTHOR

Victim safety, accountability, recurrence, repair and future lawful agency improve together

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Longitudinal controlled justice-program evaluation. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026).

107 | Crime, violence and reconciliation

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

107 | Crime, violence and reconciliation

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

107 | Crime, violence and reconciliation

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

107 | Crime, violence and reconciliation

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

107 | Crime, violence and reconciliation

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

107 | Crime, violence and reconciliation

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 107, Crime, violence and reconciliation. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Potential direct or institutional human pathway: Crime, violence and reconciliation interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

107 to 001: consequential handoff

Crime, violence and reconciliation -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

107 to 002: consequential handoff

Crime, violence and reconciliation -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

107 to 003: consequential handoff

Crime, violence and reconciliation -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

107 to 004: consequential handoff

Crime, violence and reconciliation -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

107 to 005: consequential handoff

Crime, violence and reconciliation -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

107 to 006: consequential handoff

Crime, violence and reconciliation -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

107 to 007: consequential handoff

Crime, violence and reconciliation -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

107 to 008: consequential handoff

Crime, violence and reconciliation -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

107 to 009: consequential handoff

Crime, violence and reconciliation -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

107 to 010: consequential handoff

Crime, violence and reconciliation -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

107 to 011: consequential handoff

Crime, violence and reconciliation -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

107 to 012: consequential handoff

Crime, violence and reconciliation -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

107 to 013: consequential handoff

Crime, violence and reconciliation -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

107 to 014: consequential handoff

Crime, violence and reconciliation -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

107 to 015: consequential handoff

Crime, violence and reconciliation -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

107 to 016: consequential handoff

Crime, violence and reconciliation -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

107 to 017: consequential handoff

Crime, violence and reconciliation -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

107 to 018: consequential handoff

Crime, violence and reconciliation -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

107 to 019: consequential handoff

Crime, violence and reconciliation -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

107 to 020: consequential handoff

Crime, violence and reconciliation -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

107 to 021: consequential handoff

Crime, violence and reconciliation -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

107 to 022: consequential handoff

Crime, violence and reconciliation -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

107 to 023: consequential handoff

Crime, violence and reconciliation -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

107 to 024: consequential handoff

Crime, violence and reconciliation -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

107 to 025: consequential handoff

Crime, violence and reconciliation -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

107 to 026: consequential handoff

Crime, violence and reconciliation -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

107 to 027: consequential handoff

Crime, violence and reconciliation -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

107 to 028: consequential handoff

Crime, violence and reconciliation -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

107 to 029: consequential handoff

Crime, violence and reconciliation -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

107 to 030: consequential handoff

Crime, violence and reconciliation -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

107 to 031: consequential handoff

Crime, violence and reconciliation -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

107 to 032: consequential handoff

Crime, violence and reconciliation -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

107 to 033: consequential handoff

Crime, violence and reconciliation -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

107 to 034: consequential handoff

Crime, violence and reconciliation -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

107 to 035: consequential handoff

Crime, violence and reconciliation -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

107 to 036: consequential handoff

Crime, violence and reconciliation -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

107 to 037: consequential handoff

Crime, violence and reconciliation -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

107 to 038: consequential handoff

Crime, violence and reconciliation -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

107 to 039: consequential handoff

Crime, violence and reconciliation -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

107 to 040: consequential handoff

Crime, violence and reconciliation -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

107 to 041: consequential handoff

Crime, violence and reconciliation -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

107 to 042: consequential handoff

Crime, violence and reconciliation -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

107 to 043: consequential handoff

Crime, violence and reconciliation -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

107 to 044: consequential handoff

Crime, violence and reconciliation -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

107 to 045: consequential handoff

Crime, violence and reconciliation -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

107 to 046: consequential handoff

Crime, violence and reconciliation -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

107 to 047: consequential handoff

Crime, violence and reconciliation -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

107 to 048: consequential handoff

Crime, violence and reconciliation -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

107 to 049: consequential handoff

Crime, violence and reconciliation -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

107 to 050: consequential handoff

Crime, violence and reconciliation -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

107 to 051: consequential handoff

Crime, violence and reconciliation -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

107 to 052: consequential handoff

Crime, violence and reconciliation -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

107 to 053: consequential handoff

Crime, violence and reconciliation -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

107 to 054: consequential handoff

Crime, violence and reconciliation -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

107 to 055: consequential handoff

Crime, violence and reconciliation -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

107 to 056: consequential handoff

Crime, violence and reconciliation -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

107 to 057: consequential handoff

Crime, violence and reconciliation -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

107 to 058: consequential handoff

Crime, violence and reconciliation -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

107 to 059: consequential handoff

Crime, violence and reconciliation -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

107 to 060: consequential handoff

Crime, violence and reconciliation -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

107 to 061: consequential handoff

Crime, violence and reconciliation -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

107 to 062: consequential handoff

Crime, violence and reconciliation -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

107 to 063: consequential handoff

Crime, violence and reconciliation -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

107 to 064: consequential handoff

Crime, violence and reconciliation -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

107 to 065: consequential handoff

Crime, violence and reconciliation -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

107 to 066: consequential handoff

Crime, violence and reconciliation -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

107 to 067: consequential handoff

Crime, violence and reconciliation -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

107 to 068: consequential handoff

Crime, violence and reconciliation -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

107 to 069: consequential handoff

Crime, violence and reconciliation -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

107 to 070: consequential handoff

Crime, violence and reconciliation -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

107 to 071: consequential handoff

Crime, violence and reconciliation -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

107 to 072: consequential handoff

Crime, violence and reconciliation -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

107 to 073: consequential handoff

Crime, violence and reconciliation -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

107 to 074: consequential handoff

Crime, violence and reconciliation -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

107 to 075: consequential handoff

Crime, violence and reconciliation -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

107 to 076: consequential handoff

Crime, violence and reconciliation -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

107 to 077: consequential handoff

Crime, violence and reconciliation -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

107 to 078: consequential handoff

Crime, violence and reconciliation -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

107 to 079: consequential handoff

Crime, violence and reconciliation -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

107 to 080: consequential handoff

Crime, violence and reconciliation -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

107 to 081: consequential handoff

Crime, violence and reconciliation -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

107 to 082: consequential handoff

Crime, violence and reconciliation -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

107 to 083: consequential handoff

Crime, violence and reconciliation -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

107 to 084: consequential handoff

Crime, violence and reconciliation -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

107 to 085: consequential handoff

Crime, violence and reconciliation -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

107 to 086: consequential handoff

Crime, violence and reconciliation -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

107 to 087: consequential handoff

Crime, violence and reconciliation -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

107 to 088: consequential handoff

Crime, violence and reconciliation -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

107 to 089: consequential handoff

Crime, violence and reconciliation -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

107 to 090: consequential handoff

Crime, violence and reconciliation -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

107 to 091: consequential handoff

Crime, violence and reconciliation -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

107 to 092: consequential handoff

Crime, violence and reconciliation -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

107 to 093: consequential handoff

Crime, violence and reconciliation -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

107 to 094: consequential handoff

Crime, violence and reconciliation -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

107 to 095: consequential handoff

Crime, violence and reconciliation -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

107 to 096: consequential handoff

Crime, violence and reconciliation -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

107 to 097: consequential handoff

Crime, violence and reconciliation -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

107 to 098: consequential handoff

Crime, violence and reconciliation -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

107 to 099: consequential handoff

Crime, violence and reconciliation -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

107 to 100: consequential handoff

Crime, violence and reconciliation -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

107 to 101: consequential handoff

Crime, violence and reconciliation -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

107 to 102: consequential handoff

Crime, violence and reconciliation -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

107 to 103: consequential handoff

Crime, violence and reconciliation -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

107 to 104: consequential handoff

Crime, violence and reconciliation -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

107 to 105: consequential handoff

Crime, violence and reconciliation -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

107 to 106: consequential handoff

Crime, violence and reconciliation -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

107 to 107: consequential handoff

Crime, violence and reconciliation -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Crime, violence and reconciliation becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 803-809; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

107 to 108: consequential handoff

Crime, violence and reconciliation -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

107 to 109: consequential handoff

Crime, violence and reconciliation -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

107 to 110: consequential handoff

Crime, violence and reconciliation -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

107 to 111: consequential handoff

Crime, violence and reconciliation -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

107 to 112: consequential handoff

Crime, violence and reconciliation -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

107 to 113: consequential handoff

Crime, violence and reconciliation -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

107 to 114: consequential handoff

Crime, violence and reconciliation -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

107 to 115: consequential handoff

Crime, violence and reconciliation -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

107 to 116: consequential handoff

Crime, violence and reconciliation -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

107 to 117: consequential handoff

Crime, violence and reconciliation -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

107 to 118: consequential handoff

Crime, violence and reconciliation -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

107 to 119: consequential handoff

Crime, violence and reconciliation -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

107 to 120: consequential handoff

Crime, violence and reconciliation -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Crime, violence and reconciliation into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Offense label or actor-only risk score. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Victims, actor, families, community, institutions and future potential victims. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Longitudinal controlled justice-program evaluation' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 803-809 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

107: Crime, violence and reconciliation

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal controlled justice-program evaluation or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

107: Crime, violence and reconciliation

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

107: Crime, violence and reconciliation

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal controlled justice-program evaluation or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

107: Crime, violence and reconciliation

Healthcare / care team / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Healthcare / care team. handoff links treatment, safety, continuity, caregiving and costs. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

107: Crime, violence and reconciliation

Ecological catchment / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal controlled justice-program evaluation or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026).

107: Crime, violence and reconciliation

Ecological catchment / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Ecological catchment. handoff links habitat, resource flows, affected communities and time. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

107: Crime, violence and reconciliation

Scientific laboratory / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

107: Crime, violence and reconciliation

Scientific laboratory / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

107: Crime, violence and reconciliation

Scientific laboratory / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Scientific laboratory. handoff links observation, instrument limits, replication and interpretation. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal controlled justice-program evaluation or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

107: Crime, violence and reconciliation

Digital / AI service / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Longitudinal controlled justice-program evaluation or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

107: Crime, violence and reconciliation

Digital / AI service / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

107: Crime, violence and reconciliation

Digital / AI service / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Digital / AI service. handoff links model representation, human decisions, access and failure modes. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

107: Crime, violence and reconciliation

Interregional / planetary / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Victim safety, accountability, recurrence, repair and future lawful agency improve together. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

107: Crime, violence and reconciliation

Interregional / planetary / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Interregional / planetary. handoff links transboundary effects, governance and deferred consequences. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Crime, violence and reconciliation is described in the Atlas as: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Victims, actor, families, community, institutions and future potential victims. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

107: Evidence and source reconstruction

Crime, violence and reconciliation | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal controlled justice-program evaluation. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026).

107: Boundary divergence

Crime, violence and reconciliation | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

107: Receiving carrier identification

Crime, violence and reconciliation | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal controlled justice-program evaluation. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

107: Hidden compensation accounting

Crime, violence and reconciliation | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal controlled justice-program evaluation. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026).

107: Native units and dimensional integrity

Crime, violence and reconciliation | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal controlled justice-program evaluation. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

107: Capacity specification

Crime, violence and reconciliation | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal controlled justice-program evaluation. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026).

107: Intervention design

Crime, violence and reconciliation | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal controlled justice-program evaluation. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026).

107: Incumbent parity contest

Crime, violence and reconciliation | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal controlled justice-program evaluation. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026).

107: Time-window and recurrence

Crime, violence and reconciliation | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

107: Ethical and legal safety

Crime, violence and reconciliation | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026).

107: Sensitivity and negative controls

Crime, violence and reconciliation | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

107: Replication and provenance

Crime, violence and reconciliation | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

107: Cross-domain invariant contest

Crime, violence and reconciliation | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 107: Crime, violence and reconciliation; original author status: High-stakes protocol. Native state: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Offense label or actor-only risk score. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Prevention, punishment or rehabilitation optimizes one carrier while exporting burden to victims, families or future safety. The relevant receiving carriers are: Victims, actor, families, community, institutions and future potential victims.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Show a feasible native action rather than restating a goal.

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Victim safety, accountability, recurrence, repair and future lawful agency improve together.

RETEST AND SCOPE CONTROL

Candidate decisive method: Longitudinal controlled justice-program evaluation. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 107, pp. 803-809 (Rufino 2026).

Adapter 108: Animal sentience and welfare

Conscious agency and responsibility | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory

RECORDED RECEIVING SCHEMA

Commodity/yield schema that excludes the animal as a carrier

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Candidate receivers: Animals, workers, consumers, farmers, land, ecosystems and communities.

EXISTING CAPACITY DESIGN

Welfare, alternative-production, livelihood-transition and ecological capacity

PROTECTED OUTCOME STATED BY THE AUTHOR

Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Multi-carrier welfare, nutrition and livelihood trial. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108 | Animal sentience and welfare

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 108, Animal sentience and welfare. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Potential direct or institutional human pathway: Animal sentience and welfare interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Welfare, alternative-production, livelihood-transition and ecological capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

108 | Animal sentience and welfare

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 108, Animal sentience and welfare. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Potential direct or institutional human pathway: Animal sentience and welfare interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Welfare, alternative-production, livelihood-transition and ecological capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

108 | Animal sentience and welfare

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 108, Animal sentience and welfare. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Potential direct or institutional human pathway: Animal sentience and welfare interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Welfare, alternative-production, livelihood-transition and ecological capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

108 | Animal sentience and welfare

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 108, Animal sentience and welfare. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Potential direct or institutional human pathway: Animal sentience and welfare interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Welfare, alternative-production, livelihood-transition and ecological capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

108 | Animal sentience and welfare

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 108, Animal sentience and welfare. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Potential direct or institutional human pathway: Animal sentience and welfare interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Welfare, alternative-production, livelihood-transition and ecological capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

108 | Animal sentience and welfare

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 108, Animal sentience and welfare. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Potential direct or institutional human pathway: Animal sentience and welfare interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Welfare, alternative-production, livelihood-transition and ecological capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

108 to 001: consequential handoff

Animal sentience and welfare -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

108 to 002: consequential handoff

Animal sentience and welfare -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

108 to 003: consequential handoff

Animal sentience and welfare -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

108 to 004: consequential handoff

Animal sentience and welfare -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

108 to 005: consequential handoff

Animal sentience and welfare -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

108 to 006: consequential handoff

Animal sentience and welfare -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

108 to 007: consequential handoff

Animal sentience and welfare -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

108 to 008: consequential handoff

Animal sentience and welfare -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

108 to 009: consequential handoff

Animal sentience and welfare -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

108 to 010: consequential handoff

Animal sentience and welfare -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

108 to 011: consequential handoff

Animal sentience and welfare -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

108 to 012: consequential handoff

Animal sentience and welfare -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

108 to 013: consequential handoff

Animal sentience and welfare -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

108 to 014: consequential handoff

Animal sentience and welfare -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

108 to 015: consequential handoff

Animal sentience and welfare -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

108 to 016: consequential handoff

Animal sentience and welfare -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

108 to 017: consequential handoff

Animal sentience and welfare -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

108 to 018: consequential handoff

Animal sentience and welfare -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

108 to 019: consequential handoff

Animal sentience and welfare -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

108 to 020: consequential handoff

Animal sentience and welfare -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

108 to 021: consequential handoff

Animal sentience and welfare -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

108 to 022: consequential handoff

Animal sentience and welfare -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

108 to 023: consequential handoff

Animal sentience and welfare -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

108 to 024: consequential handoff

Animal sentience and welfare -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

108 to 025: consequential handoff

Animal sentience and welfare -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

108 to 026: consequential handoff

Animal sentience and welfare -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

108 to 027: consequential handoff

Animal sentience and welfare -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

108 to 028: consequential handoff

Animal sentience and welfare -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

108 to 029: consequential handoff

Animal sentience and welfare -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

108 to 030: consequential handoff

Animal sentience and welfare -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

108 to 031: consequential handoff

Animal sentience and welfare -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

108 to 032: consequential handoff

Animal sentience and welfare -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

108 to 033: consequential handoff

Animal sentience and welfare -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

108 to 034: consequential handoff

Animal sentience and welfare -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

108 to 035: consequential handoff

Animal sentience and welfare -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

108 to 036: consequential handoff

Animal sentience and welfare -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

108 to 037: consequential handoff

Animal sentience and welfare -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

108 to 038: consequential handoff

Animal sentience and welfare -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

108 to 039: consequential handoff

Animal sentience and welfare -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

108 to 040: consequential handoff

Animal sentience and welfare -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

108 to 041: consequential handoff

Animal sentience and welfare -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

108 to 042: consequential handoff

Animal sentience and welfare -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

108 to 043: consequential handoff

Animal sentience and welfare -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

108 to 044: consequential handoff

Animal sentience and welfare -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

108 to 045: consequential handoff

Animal sentience and welfare -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

108 to 046: consequential handoff

Animal sentience and welfare -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

108 to 047: consequential handoff

Animal sentience and welfare -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

108 to 048: consequential handoff

Animal sentience and welfare -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

108 to 049: consequential handoff

Animal sentience and welfare -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

108 to 050: consequential handoff

Animal sentience and welfare -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

108 to 051: consequential handoff

Animal sentience and welfare -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

108 to 052: consequential handoff

Animal sentience and welfare -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

108 to 053: consequential handoff

Animal sentience and welfare -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

108 to 054: consequential handoff

Animal sentience and welfare -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

108 to 055: consequential handoff

Animal sentience and welfare -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

108 to 056: consequential handoff

Animal sentience and welfare -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

108 to 057: consequential handoff

Animal sentience and welfare -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

108 to 058: consequential handoff

Animal sentience and welfare -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

108 to 059: consequential handoff

Animal sentience and welfare -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

108 to 060: consequential handoff

Animal sentience and welfare -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

108 to 061: consequential handoff

Animal sentience and welfare -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

108 to 062: consequential handoff

Animal sentience and welfare -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

108 to 063: consequential handoff

Animal sentience and welfare -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

108 to 064: consequential handoff

Animal sentience and welfare -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

108 to 065: consequential handoff

Animal sentience and welfare -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

108 to 066: consequential handoff

Animal sentience and welfare -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

108 to 067: consequential handoff

Animal sentience and welfare -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

108 to 068: consequential handoff

Animal sentience and welfare -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

108 to 069: consequential handoff

Animal sentience and welfare -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

108 to 070: consequential handoff

Animal sentience and welfare -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

108 to 071: consequential handoff

Animal sentience and welfare -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

108 to 072: consequential handoff

Animal sentience and welfare -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

108 to 073: consequential handoff

Animal sentience and welfare -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

108 to 074: consequential handoff

Animal sentience and welfare -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

108 to 075: consequential handoff

Animal sentience and welfare -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

108 to 076: consequential handoff

Animal sentience and welfare -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

108 to 077: consequential handoff

Animal sentience and welfare -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

108 to 078: consequential handoff

Animal sentience and welfare -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

108 to 079: consequential handoff

Animal sentience and welfare -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

108 to 080: consequential handoff

Animal sentience and welfare -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

108 to 081: consequential handoff

Animal sentience and welfare -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

108 to 082: consequential handoff

Animal sentience and welfare -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

108 to 083: consequential handoff

Animal sentience and welfare -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

108 to 084: consequential handoff

Animal sentience and welfare -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

108 to 085: consequential handoff

Animal sentience and welfare -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

108 to 086: consequential handoff

Animal sentience and welfare -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

108 to 087: consequential handoff

Animal sentience and welfare -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

108 to 088: consequential handoff

Animal sentience and welfare -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

108 to 089: consequential handoff

Animal sentience and welfare -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

108 to 090: consequential handoff

Animal sentience and welfare -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

108 to 091: consequential handoff

Animal sentience and welfare -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

108 to 092: consequential handoff

Animal sentience and welfare -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

108 to 093: consequential handoff

Animal sentience and welfare -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

108 to 094: consequential handoff

Animal sentience and welfare -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

108 to 095: consequential handoff

Animal sentience and welfare -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

108 to 096: consequential handoff

Animal sentience and welfare -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

108 to 097: consequential handoff

Animal sentience and welfare -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

108 to 098: consequential handoff

Animal sentience and welfare -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

108 to 099: consequential handoff

Animal sentience and welfare -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

108 to 100: consequential handoff

Animal sentience and welfare -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

108 to 101: consequential handoff

Animal sentience and welfare -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

108 to 102: consequential handoff

Animal sentience and welfare -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

108 to 103: consequential handoff

Animal sentience and welfare -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

108 to 104: consequential handoff

Animal sentience and welfare -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

108 to 105: consequential handoff

Animal sentience and welfare -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

108 to 106: consequential handoff

Animal sentience and welfare -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

108 to 107: consequential handoff

Animal sentience and welfare -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

108 to 108: consequential handoff

Animal sentience and welfare -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Animal sentience and welfare becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 810-816; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

108 to 109: consequential handoff

Animal sentience and welfare -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Collective agency and institutional choice; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 817-823; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

108 to 110: consequential handoff

Animal sentience and welfare -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

108 to 111: consequential handoff

Animal sentience and welfare -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

108 to 112: consequential handoff

Animal sentience and welfare -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

108 to 113: consequential handoff

Animal sentience and welfare -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

108 to 114: consequential handoff

Animal sentience and welfare -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

108 to 115: consequential handoff

Animal sentience and welfare -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Predation, livestock and food-system transformation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Yield, price or human nutrition alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Animals, humans, workers, farmers, consumers, land, ecosystems and future food security. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Welfare, alternative proteins, regenerative land use, livelihood transition and nutrition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Phased regional transition with preregistered carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 860-866; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 115 pp. 860-866.

108 to 116: consequential handoff

Animal sentience and welfare -> Learning, plasticity and cultural evolution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Learning, plasticity and cultural evolution: Neural plasticity, memory, skill, belief, imitation, teaching, incentives and social transmission.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Learning, plasticity and cultural evolution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Test score, output or adoption count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Learner, teachers, peers, institutions, future self and cultural network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Feedback, practice, memory, rest, social scaffolding and plural knowledge capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal transfer-and-retention experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 867-873; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 116 pp. 867-873.

108 to 117: consequential handoff

Animal sentience and welfare -> Self-organization and emergence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Self-organization and emergence: Local interactions, gradients, constraints, feedback, network topology, resource flows and macrostate.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Self-organization and emergence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Macro outcome without micro-carrier ledger. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Components, neighborhoods, emergent structure and external environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Boundary conditions, damping, redundancy, resource routing and adaptive feedback capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Multi-scale simulation plus physical/biological holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 874-880; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 117 pp. 874-880.

108 to 118: consequential handoff

Animal sentience and welfare -> Creation, provenance and dependency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Creation, provenance and dependency: Origin lineage, creator-created dependency, resources, control, autonomy, maintenance and reciprocal effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Creation, provenance and dependency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Ownership or authorship treated as sufficient relationship model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Creators, created systems, maintainers, users, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Provenance, stewardship, autonomy-transition and reciprocal-viability architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Longitudinal creator-created dependency audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 881-887; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 118 pp. 881-887.

108 to 119: consequential handoff

Animal sentience and welfare -> Cosmological evolution and structure formation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Cosmological evolution and structure formation: Spacetime geometry, fields, matter/radiation, density structure, expansion, gravitation and observational state.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Cosmological evolution and structure formation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Single scale or observable treated as complete cosmic state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: Observed regions, fields/matter components, instruments, models and observers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Cross-scale observation, uncertainty, model-comparison and instrumentation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Preregistered cross-survey predictive holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 888-894; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 119 pp. 888-894.

108 to 120: consequential handoff

Animal sentience and welfare -> Cross-substrate consciousness, temporal coexistence and closure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

PROPOSED RECEIVER AND STATE

Cross-substrate consciousness, temporal coexistence and closure: The entire coupled consequential state across Adapters 001-119, including dependencies, time horizons and current consciousness-legibility.

INTERFACE AND COUPLING STATUS

Proposed interface from Animal sentience and welfare into Cross-substrate consciousness, temporal coexistence and closure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Commodity/yield schema that excludes the animal as a carrier. Receiver's limited view: Any local adapter, species, institution or observer claiming closure from its own schema alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Candidate receiver carriers: All materially coupled conscious carriers reached through direct, indirect and delayed dependency paths. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Receiving capacity: Coordinated capacity construction across relevant adapters, phased through time, while preserving openness to newly legible consciousness and.... Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Multi-carrier welfare, nutrition and livelihood trial' with a receiver study of 'Time-locked system-of-systems closure test across multiple adapters'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 810-816 and 895-901; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026). Receiver Adapter 120 pp. 895-901.

108: Animal sentience and welfare

Household / family / Insufficient capacity | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Animal sentience and welfare is described in the Atlas as: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Multi-carrier welfare, nutrition and livelihood trial or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Animal sentience and welfare

Household / family / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Animal sentience and welfare is described in the Atlas as: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Use Multi-carrier welfare, nutrition and livelihood trial or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Animal sentience and welfare

Household / family / Delayed effects | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Animal sentience and welfare is described in the Atlas as: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Multi-carrier welfare, nutrition and livelihood trial or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Animal sentience and welfare

Household / family / Measurement uncertainty | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Animal sentience and welfare is described in the Atlas as: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Measurement uncertainty, meaning causal pathway or protected-carrier outcome is not yet identifiable. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under measurement uncertainty, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Multi-carrier welfare, nutrition and livelihood trial or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

108: Animal sentience and welfare

Household / family / Coordination failure | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Animal sentience and welfare is described in the Atlas as: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Coordination failure, meaning individually reasonable actions create jointly harmful or inefficient interactions. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under coordination failure, test whether altering topology before the action is safer than boundary-aware re-selection.

Household / family / Adversarial / inequitable distribution | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Household / family. decision affects caretakers, time, participation and household reserve. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Animal sentience and welfare is described in the Atlas as: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Adversarial / inequitable distribution, meaning locally favored actors can externalize burden onto less-protected carriers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

Candidate setting: School / university. hand-off links learning, credentialing, accessible support and opportunity. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Animal sentience and welfare is described in the Atlas as: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Delayed effects, meaning beneficial local outcome may create later burdens in coupled receivers. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under delayed effects, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Multi-carrier welfare, nutrition and livelihood trial or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Animal sentience and welfare is described in the Atlas as: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Multi-carrier welfare, nutrition and livelihood trial or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Insufficient capacity, meaning receiver cannot accept full proposed influx under observed resource limits. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under insufficient capacity, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Multi-carrier welfare, nutrition and livelihood trial or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

108: Animal sentience and welfare

Public infrastructure / Schema mismatch | one domain-native research configuration

DESIGN SCENARIO / NOT A HISTORICAL EVENT

RESEARCH ENVIRONMENT

Candidate setting: Public infrastructure. handoff links material flows, reliability, maintenance and external exposure. No real-world site is asserted by this planning scenario.

NATIVE MECHANISM TO PRESERVE

Animal sentience and welfare is described in the Atlas as: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory. Any deployment must preserve the established physical, biological, legal or institutional mechanism of this domain.

OBSERVED-IN-ATLAS CANDIDATE BLOCKER

Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. Additional scenario stressor: Schema mismatch, meaning institutional representation misses a material part of the evidence-grounded state. This stressor has not been observed in a specific population here.

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under schema mismatch, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

LERM CAUSAL WORK ORDER

Define actionable event a and comparator a0. Estimate D_a(j,k,tau) for Animals, workers, consumers, farmers, land, ecosystems and communities. Identify pathways and hidden compensation using credible data rather than narrative fit.

IAMF-P CONSTRUCTIVE PROPOSAL

Evaluate a capacity build based on: Welfare, alternative-production, livelihood-transition and ecological capacity. Under adversarial / inequitable distribution, test whether altering topology before the action is safer than boundary-aware re-selection.

MANDATORY COUNTERFACTUAL AND SAFETY

Use the strongest admissible incumbent; hold information, intervention budget and horizon equal. Reject options that violate safety, consent or governing physical constraints.

CONSEQUENTIAL SUCCESS MEASUREMENTS

Author's native acceptance: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced. Specify thresholds, subgroup exposure, future reserve and uncertainty before releasing the intervention.

NEXT REPRODUCIBLE OPERATION

Use Multi-carrier welfare, nutrition and livelihood trial or a more valid native design. If no solution has been shown, report the binding constraint and next legitimate construction search; do not invent a PASS.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Evidence and source reconstruction

Animal sentience and welfare | protocol 1 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Evidence and source reconstruction. Establish what is observed, reported, derived, simulated and currently unavailable. Audit definitions, dates and units.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Boundary divergence

Animal sentience and welfare | protocol 2 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Boundary divergence. Predeclare local and consequential objectives, identical feasible action sets, and a measurable divergence test.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Causal diagram and identifiability

Animal sentience and welfare | protocol 3 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Causal diagram and identifiability. Draw the candidate causal graph; identify confounders, mediators, spillovers and selection mechanisms.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Receiving carrier identification

Animal sentience and welfare | protocol 4 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Receiving carrier identification. Predict the destination, path and delay of consequential burdens before measuring post-state outcomes.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Hidden compensation accounting

Animal sentience and welfare | protocol 5 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Hidden compensation accounting. Measure which agent, reserve, budget, ecosystem or later period silently carries the load.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Native units and dimensional integrity

Animal sentience and welfare | protocol 6 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Native units and dimensional integrity. Define each carrier outcome in its own units; avoid offsetting unlike harms with unsupported scalar sums.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Capacity specification

Animal sentience and welfare | protocol 7 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Capacity specification. Identify the binding receiver constraint and specify the smallest permissible constructive action.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Intervention design

Animal sentience and welfare | protocol 8 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Intervention design. Choose randomized, natural, observational or mechanistic evidence compatible with safety and identifiability.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Incumbent parity contest

Animal sentience and welfare | protocol 9 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Incumbent parity contest. Compare against strongest existing local, boundary-aware, causal and resource-constrained methods.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Time-window and recurrence

Animal sentience and welfare | protocol 10 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Time-window and recurrence. Measure early, intermediate and delayed outcomes, including reserve depletion and changing bottlenecks.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Ethical and legal safety

Animal sentience and welfare | protocol 11 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Ethical and legal safety. Determine affected rights, vulnerable groups, irreversible harms, consent, permissions and safety constraints.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Sensitivity and negative controls

Animal sentience and welfare | protocol 12 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Sensitivity and negative controls. Vary unmeasured confounding, missingness, cost, thresholds and adverse spillover assumptions.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Replication and provenance

Animal sentience and welfare | protocol 13 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Replication and provenance. Version the kernel, code, data, transformation decisions, negative findings and external replication.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

108: Cross-domain invariant contest

Animal sentience and welfare | protocol 14 of 14

RESEARCH PROTOCOL / NO NEW EMPIRICAL RESULT

ORIGINAL DOMAIN AND PRIOR RECORD

Adapter 108: Animal sentience and welfare; original author status: Ethical / empirical frontier. Native state: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

EVALUATION OBJECTIVE

Cross-domain invariant contest. Keep K_R fixed while swapping M_d; test whether new measurements produce predictions beyond domain incumbents.

SCHEMA AND CANDIDATE BIAS

Currently described receiver representation: Commodity/yield schema that excludes the animal as a carrier. Distinguish genuine measurement failure from domain states that do not exist.

CAUSAL PATHWAY TO DISCRIMINATE

Atlas candidate bottleneck: Human nutrition or commercial gain is produced by unrepresented animal or ecological burden. The relevant receiving carriers are: Animals, workers, consumers, farmers, land, ecosystems and communities.

INTERVENTION WHOSE EFFECT MATTERS

Proposed constructive design: Welfare, alternative-production, livelihood-transition and ecological capacity. Show a feasible native action rather than restating a goal.

WHAT TO REPORT

Record exact sources, units, time, local and consequential objectives, strongest comparator, effect sizes, uncertainty and documented harms. Reference native goal: Nutrition and livelihoods improve while animal and ecological burden also improves or is materially reduced.

RETEST AND SCOPE CONTROL

Candidate decisive method: Multi-carrier welfare, nutrition and livelihood trial. Determine whether the fixed operator adds results beyond domain science, and retain negative findings.

CONSEQUENCE OF NON-PASS

Make the next constraint legible: missing causal evidence, insufficient capacity, unacceptable cost, physical impossibility, or external protected-carrier burden. Do not claim success without verified outcomes.

Source: Atlas Adapter 108, pp. 810-816 (Rufino 2026).

Adapter 109: Collective agency and institutional choice

Conscious agency and responsibility | Internal carrier and capacity reconstruction

ANALYTICAL DESIGN / NOT AN OBSERVED IMPLEMENTATION

DOMAIN-NATIVE STATE

Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory

RECORDED RECEIVING SCHEMA

Organization treated as a single actor without internal carrier structure

CANDIDATE BURDEN AND RECEIVING CARRIERS

Blocker in the source Atlas: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence. Candidate receivers: Members, minorities, leaders, outsiders, institutions and future administrations.

EXISTING CAPACITY DESIGN

Distributed decision provenance, dissent channels, accountability and cross-boundary capacity

PROTECTED OUTCOME STATED BY THE AUTHOR

Collective performance and legitimacy rise without burden concentration or responsibility diffusion

SCIENTIFIC NEXT STEP

Atlas proposed decisive test: Prospective institutional decision audit. This remains a proposed testing route, not proof of a completed successful implementation.

ORIGINALITY AND CONSTRUCTION OBLIGATION

Run causal receiving-carrier diagnosis before action; compare construction against strong established methods; do not accept positive averages as proof that all material carriers benefited.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026).

109 | Collective agency and institutional choice

Individual human / person | Insufficient capacity

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 109, Collective agency and institutional choice. Native state: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory. Potential direct or institutional human pathway: Collective agency and institutional choice interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Insufficient capacity: The human has limited time, health, physical access, material resources, protective support or opportunity. Source Atlas proposed limiting condition: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Distributed decision provenance, dissent channels, accountability and cross-boundary capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Collective performance and legitimacy rise without burden concentration or responsibility diffusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

109 | Collective agency and institutional choice

Individual human / person | Schema mismatch

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 109, Collective agency and institutional choice. Native state: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory. Potential direct or institutional human pathway: Collective agency and institutional choice interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Schema mismatch: The person has evidence-grounded capabilities or needs that institutional identifiers, scores or labels do not adequately recognize. Source Atlas proposed limiting condition: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Distributed decision provenance, dissent channels, accountability and cross-boundary capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Collective performance and legitimacy rise without burden concentration or responsibility diffusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

109 | Collective agency and institutional choice

Individual human / person | Delayed effects

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 109, Collective agency and institutional choice. Native state: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory. Potential direct or institutional human pathway: Collective agency and institutional choice interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Delayed effects: A short-term change influences future-self health, skills, income, dependence, options or relationships. Source Atlas proposed limiting condition: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Distributed decision provenance, dissent channels, accountability and cross-boundary capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Collective performance and legitimacy rise without burden concentration or responsibility diffusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

109 | Collective agency and institutional choice

Individual human / person | Measurement uncertainty

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 109, Collective agency and institutional choice. Native state: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory. Potential direct or institutional human pathway: Collective agency and institutional choice interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Measurement uncertainty: The record lacks consented individual outcomes, counterfactuals, follow-up, or reliable protection metrics. Source Atlas proposed limiting condition: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

Investigate whether Distributed decision provenance, dissent channels, accountability and cross-boundary capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Collective performance and legitimacy rise without burden concentration or responsibility diffusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

109 | Collective agency and institutional choice

Individual human / person | Coordination failure

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 109, Collective agency and institutional choice. Native state: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory. Potential direct or institutional human pathway: Collective agency and institutional choice interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Coordination failure: Family, employer, provider, government or technical systems hand off obligations to the individual without coordinated support. Source Atlas proposed limiting condition: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Distributed decision provenance, dissent channels, accountability and cross-boundary capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Collective performance and legitimacy rise without burden concentration or responsibility diffusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

109 | Collective agency and institutional choice

Individual human / person | Adversarial / inequitable distribution

PERSON AS PRIMARY CONSEQUENTIAL CARRIER

Study setting: Individual human / person. The person is an actual agent with dignity, physical needs, autonomy, relationships, and a future self, not simply a household, institution, metric or interchangeable resource.

NATIVE DOMAIN AND CAUSAL INTERFACE

Adapter 109, Collective agency and institutional choice. Native state: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory. Potential direct or institutional human pathway: Collective agency and institutional choice interacts with a person through the native system, if the linkage is empirically identified.

CRITICAL CONDITION TO INVESTIGATE

Adversarial / inequitable distribution: Unequal power, coercion, inaccessible systems, discrimination or exploitative incentives shift costs to a person. Source Atlas proposed limiting condition: Collective decisions hide minority burdens or diffuse accountability until no node owns the consequence.

OBSERVATION / RECORD REQUIRED

Identify whether an individual is directly or indirectly exposed; document time, agency, consent, rights, health, access, capacity, and delayed effects where causally relevant. Evidence of no person-level link remains an honest result.

LERM RECEIVING-CARRIER TRACE

Define a domain-native action and a fair comparator, trace what the specific person receives, what the person supplies in hidden compensation, and which other actors or future states bear consequences.

IAMF-P CONSTRUCTIVE TASK

Investigate whether Distributed decision provenance, dissent channels, accountability and cross-boundary capacity can be adapted to build a genuine receiving capacity for that individual without shifting harm. A design proposal does not demonstrate a working intervention.

MUTUAL UPTICK AND NEXT OPERATION

Candidate Atlas goal: Collective performance and legitimacy rise without burden concentration or responsibility diffusion. Measure actual individual and other protected-carrier outcomes before and after an authorized action, over appropriate horizons. If unmet, record the limiting constraint and next ethically admissible construction search.

109 to 001: consequential handoff

Collective agency and institutional choice -> Whole-person quality of life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Whole-person quality of life: Health, function, time, autonomy, relationships, safety, income, environment and future capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Whole-person quality of life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single score, diagnosis, income bracket or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, household, caregivers, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Whole-life state model plus coordinated capacity across health, time, income and environment. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal cohort with preregistered multidimensional outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 51-57; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 001 pp. 51-57.

109 to 002: consequential handoff

Collective agency and institutional choice -> Nutrition and metabolism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Nutrition and metabolism: Diet, metabolic state, affordability, culture, timing, microbiome and activity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Nutrition and metabolism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Calories/macros or generic diet categories. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Body, household budget, food system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Adaptive nutrition and access architecture with feedback and affordability constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Randomized adaptive nutrition trial with cost and adherence carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 58-64; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 002 pp. 58-64.

109 to 003: consequential handoff

Collective agency and institutional choice -> Sleep and recovery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Sleep and recovery: Sleep architecture, circadian timing, stress, workload, environment and recovery reserve.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Sleep and recovery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Hours slept or wearable score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Body, cognition, household schedule. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Recovery controller integrating timing, environment, workload and physiology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal crossover study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 65-71; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 003 pp. 65-71.

109 to 004: consequential handoff

Collective agency and institutional choice -> Reproductive and sexual health | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Reproductive and sexual health: Endocrine, reproductive, sexual, relational, consent, fertility and safety state.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Reproductive and sexual health; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single fertility, disease or risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Individual, partner, future child, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Longitudinal reproductive-state architecture plus consent/safety controls. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Clinical trials + patient-reported and partner- impact carriers'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 72-78; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 004 pp. 72-78.

109 to 005: consequential handoff

Collective agency and institutional choice -> Disability and accessibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Disability and accessibility: Capabilities plus environmental demands, interfaces and support.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Disability and accessibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Deficit-only person label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, caregiver, workplace, public space. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Environment-first accessibility architecture plus assistive capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Before/after environment redesign with workload measures'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 79-85; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 005 pp. 79-85.

109 to 006: consequential handoff

Collective agency and institutional choice -> Mobility and physical function | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Mobility and physical function: Strength, pain, balance, endurance, environment, assistive devices.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Mobility and physical function; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single functional score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Body, caregiver, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Adaptive rehabilitation plus environment and device redesign. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Controlled rehabilitation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 86-92; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 006 pp. 86-92.

109 to 007: consequential handoff

Collective agency and institutional choice -> Family and caregiving | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Family and caregiving: Needs, capacities, schedules, money, emotional load, dependency and support network.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Family and caregiving; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Household role labels. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Primary caregiver, dependents, siblings, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Care-load ledger, shared coordination and external capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective household burden study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 93-99; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 007 pp. 93-99.

109 to 008: consequential handoff

Collective agency and institutional choice -> Safety and personal security | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Safety and personal security: Threat exposure, environment, support, mobility and response capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Safety and personal security; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Incident count or generic risk class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, community, responder. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Safety architecture that increases protection without reducing autonomy. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective safety intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 100-106; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 008 pp. 100-106.

109 to 009: consequential handoff

Collective agency and institutional choice -> Housing and domestic environment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Housing and domestic environment: Shelter, cost, commute, safety, air, heat, crowding and social context.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Housing and domestic environment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Property price or occupancy status. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Resident, landlord, neighborhood, city. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Whole-cost housing and location architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Matched housing intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 107-113; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 009 pp. 107-113.

109 to 010: consequential handoff

Collective agency and institutional choice -> Human longevity and life-course planning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Human longevity and life-course planning: Healthspan, lifespan, finances, relationships, purpose and care capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Human longevity and life-course planning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Chronological age or retirement age. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, family, institutions, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Life-course capital and care architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal life-course cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 114-120; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 010 pp. 114-120.

109 to 011: consequential handoff

Collective agency and institutional choice -> Psychology and social legibility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Psychology and social legibility: Longitudinal capability, burden, trauma, environment, relationships and compensation.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Psychology and social legibility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Snapshot diagnosis or social category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, family, employer, clinician. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Multidimensional schema plus support matched to hidden burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal external cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 122-128; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 011 pp. 122-128.

109 to 012: consequential handoff

Collective agency and institutional choice -> Identity and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Identity and self-model: Attributes, history, roles, values, capabilities and contexts.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Identity and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single identity label or credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person and receiving institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Selective multi-context identity graph with provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Cross-context identity study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 129-135; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 012 pp. 129-135.

109 to 013: consequential handoff

Collective agency and institutional choice -> Relationships and intimacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Relationships and intimacy: Needs, boundaries, consent, trust, history, resources and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Relationships and intimacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Relationship status or personality label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Partners and wider support network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Reciprocal state and burden ledger plus consent architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Dyadic longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 136-142; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 013 pp. 136-142.

109 to 014: consequential handoff

Collective agency and institutional choice -> Parenting and child development | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Parenting and child development: Biology, attachment, education, safety, resources, environment and agency.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Parenting and child development; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Age norm, grade or behavior label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Child, parent, school, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Developmental state map plus distributed support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal family-school cohort'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 143-149; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 014 pp. 143-149.

109 to 015: consequential handoff

Collective agency and institutional choice -> Purpose and self-actualization | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Purpose and self-actualization: Capabilities, values, opportunity, health, autonomy and social contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Purpose and self-actualization; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Career status, wealth or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, relationships, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Whole-person capability architecture and burden guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal multidimensional evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 150-156; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 015 pp. 150-156.

109 to 016: consequential handoff

Collective agency and institutional choice -> Existential wellbeing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Existential wellbeing: Meaning, mortality awareness, belonging, agency and life coherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Existential wellbeing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Symptom or productivity proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Voluntary meaning-reflection and support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Patient/user-reported longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 157-163; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 016 pp. 157-163.

109 to 017: consequential handoff

Collective agency and institutional choice -> Spiritual life | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Spiritual life: Belief, practice, meaning, community, conscience and autonomy.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Spiritual life; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Institutional affiliation alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Individual, family, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Voluntary, transparent, safeguarding-centered spiritual/community architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Ethical observational study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 164-170; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 017 pp. 164-170.

109 to 018: consequential handoff

Collective agency and institutional choice -> Religion and community institutions | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Religion and community institutions: Doctrine, governance, resources, safeguarding and member experience.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Religion and community institutions; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Membership or doctrinal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Members, families, leaders, wider community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Transparent governance, reporting, safeguarding and exit rights. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Institutional longitudinal audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 171-177; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 018 pp. 171-177.

109 to 019: consequential handoff

Collective agency and institutional choice -> Emotion and affect regulation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Emotion and affect regulation: Internal state, context, physiology, cognition and social feedback.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Emotion and affect regulation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Valence score or symptom label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person and relationships. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: State-aware regulation architecture with physiological feedback. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Crossover intervention study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 178-184; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 019 pp. 178-184.

109 to 020: consequential handoff

Collective agency and institutional choice -> Trust and fidelity between people | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Trust and fidelity between people: History, promises, evidence, uncertainty and reciprocity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Trust and fidelity between people; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Trusted/untrusted binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: People and institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Dynamic provenance and expectation architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective trust-repair study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 185-191; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 020 pp. 185-191.

109 to 021: consequential handoff

Collective agency and institutional choice -> Healthcare delivery | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Healthcare delivery: Clinical state, logistics, caregiver capacity, finance and post-discharge environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Healthcare delivery; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Episode-of-care schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Patient, caregiver, outpatient system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Consequential discharge/care orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 193-199; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 021 pp. 193-199.

109 to 022: consequential handoff

Collective agency and institutional choice -> Diagnostics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Diagnostics: Underlying disease state, uncertainty, test characteristics and downstream actions.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Diagnostics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single test result. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Patient, clinician, payer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Bayesian multi-source diagnostic schema + uncertainty communication. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective blinded diagnostic study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 200-206; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 022 pp. 200-206.

109 to 023: consequential handoff

Collective agency and institutional choice -> Cancer ecology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Cancer ecology: Clone mix, immune state, microenvironment, host reserve and therapy exposure.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Cancer ecology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Stage/tumor-size snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Resistant clones, healthy tissue, immune system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Adaptive ecological state estimator + resistance/host capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Preclinical then clinical adaptive trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 207-213; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 023 pp. 207-213.

109 to 024: consequential handoff

Collective agency and institutional choice -> Neuroscience and neurodegeneration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Neuroscience and neurodegeneration: Neural, glial, vascular, metabolic, network and functional state.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Neuroscience and neurodegeneration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single biomarker or visible function. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Neural networks, metabolism, caregiver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Multimodal state estimator + restorative capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Multimodal longitudinal intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 214-220; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 024 pp. 214-220.

109 to 025: consequential handoff

Collective agency and institutional choice -> Aging biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Aging biology: Coupled damage, repair, senescence, immunity, metabolism and regeneration.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Aging biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Age scalar or isolated hallmark. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Cells, tissues, immune system, metabolism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Moving-bottleneck RVG controller across damage/repair channels. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Preclinical multi-pathway study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 221-227; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 025 pp. 221-227.

109 to 026: consequential handoff

Collective agency and institutional choice -> Immunology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Immunology: Immune activation, tolerance, pathogen/tumor signals and tissue damage.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Immunology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single cytokine or cell-count schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Pathogen, immune cells, host tissue. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: State-dependent immune control balancing clearance and collateral damage. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Controlled biological study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 228-234; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 026 pp. 228-234.

109 to 027: consequential handoff

Collective agency and institutional choice -> Infectious disease | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Infectious disease: Pathogen dynamics, host immunity, behavior, network spread and treatment.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Infectious disease; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Case count or pathogen-only model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Patients, contacts, health system, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Multi-carrier containment + treatment + livelihood capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective outbreak protocol'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 235-241; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 027 pp. 235-241.

109 to 028: consequential handoff

Collective agency and institutional choice -> Microbiome | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Microbiome: Host physiology plus microbial ecology and diet/environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Microbiome; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Species abundance snapshot. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Host and microbial community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Functional ecosystem state model and adaptive intervention. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Controlled longitudinal study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 242-248; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 028 pp. 242-248.

109 to 029: consequential handoff

Collective agency and institutional choice -> Genomics and proteomics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Genomics and proteomics: Variants, expression, proteins, pathways, context and phenotype.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Genomics and proteomics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single marker/pathogenicity label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Cells, tissues, patient. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Multi-omic causal state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective multi-omic validation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 249-255; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 029 pp. 249-255.

109 to 030: consequential handoff

Collective agency and institutional choice -> Surgery and rehabilitation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Surgery and rehabilitation: Anatomy, function, pain, recovery capacity, home support and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Surgery and rehabilitation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Procedure success or anatomical correction. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Patient, caregiver, rehab system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Prehabilitation + procedure + recovery orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Pragmatic trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 256-262; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 030 pp. 256-262.

109 to 031: consequential handoff

Collective agency and institutional choice -> Early-childhood development and education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Early-childhood development and education: Development, safety, language, nutrition, play, attachment and resources.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Early-childhood development and education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Age milestone or readiness score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Child, caregiver, educator. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Integrated developmental support architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 264-270; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 031 pp. 264-270.

109 to 032: consequential handoff

Collective agency and institutional choice -> K-12 education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

K-12 education: Knowledge, skills, wellbeing, context, resources and learning trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into K-12 education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Grade/test score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Student, teacher, family. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Capability graph + adaptive learning + wellbeing constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Cluster randomized trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 271-277; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 032 pp. 271-277.

109 to 033: consequential handoff

Collective agency and institutional choice -> Higher education | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Higher education: Capability, knowledge, network, finances and career pathways.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Higher education; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Degree/GPA credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Student, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Capability/provenance portfolio + adaptive pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal graduate outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 278-284; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 033 pp. 278-284.

109 to 034: consequential handoff

Collective agency and institutional choice -> Vocational and workforce learning | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Vocational and workforce learning: Skills, task demand, wages, mobility and employer needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Vocational and workforce learning; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Course completion certificate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Worker, employer, training provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Skill-to-task provenance and placement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Matched labor-market evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 285-291; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 034 pp. 285-291.

109 to 035: consequential handoff

Collective agency and institutional choice -> Scientific research | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Scientific research: Hypotheses, methods, data, negative results, replication and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Scientific research; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Publication/citation unit. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Researchers, institutions, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Experiment provenance + negative-result + replication architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Cross-lab replication program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 292-298; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 035 pp. 292-298.

109 to 036: consequential handoff

Collective agency and institutional choice -> Justice and courts | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Justice and courts: Facts, evidence, harm, intent, procedure, history and remedies.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Justice and courts; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Case category or docket state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Victims, accused, families, courts, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Causal provenance + harm/restitution + recurrence architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective process evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 299-305; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 036 pp. 299-305.

109 to 037: consequential handoff

Collective agency and institutional choice -> Policing and public safety systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Policing and public safety systems: Threat, context, evidence, community trust, capacity and alternatives.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Policing and public safety systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Incident/offense label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Residents, officers, victims, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Evidence-first response selection + prevention/support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Independent public evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 306-312; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 037 pp. 306-312.

109 to 038: consequential handoff

Collective agency and institutional choice -> Corrections, rehabilitation and reintegration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Corrections, rehabilitation and reintegration: Risk, harm, needs, skills, housing, work and social support.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Corrections, rehabilitation and reintegration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Sentence/recidivism risk label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, family, community, justice system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Rehabilitation + restitution + housing/work capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal controlled program'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 313-319; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 038 pp. 313-319.

109 to 039: consequential handoff

Collective agency and institutional choice -> Public administration | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Public administration: Citizen state, eligibility, documents, services and agency capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Public administration; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Program-specific record. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Citizen, frontline staff, budget. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Interoperable verified state + once-only data + case orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Agency pilot with citizen/staff metrics'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 320-326; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 039 pp. 320-326.

109 to 040: consequential handoff

Collective agency and institutional choice -> Governance and institutional design | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Governance and institutional design: Authority, incentives, information, accountability, resources and affected populations.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Governance and institutional design; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Organizational chart or legal mandate. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Citizens, agencies, future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Cross-boundary outcome ledger + accountability and capacity design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective institutional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 327-333; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 040 pp. 327-333.

109 to 041: consequential handoff

Collective agency and institutional choice -> Beauty and aesthetics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Beauty and aesthetics: Biology, preference, culture, identity, safety, cost and perception.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Beauty and aesthetics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Universal beauty standard or product category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, body, household. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Personalized aesthetic/safety state architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Consumer/clinical outcome study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 335-341; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 041 pp. 335-341.

109 to 042: consequential handoff

Collective agency and institutional choice -> Fashion and apparel | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Fashion and apparel: Identity, fit, comfort, durability, labor, inventory and lifecycle.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Fashion and apparel; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Size/SKU/category schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Wearer, worker, retailer, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Adaptive sizing + provenance + circularity architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Retail field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 342-348; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 042 pp. 342-348.

109 to 043: consequential handoff

Collective agency and institutional choice -> Luxury goods | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Luxury goods: Provenance, scarcity, condition, access, identity, inventory and lifecycle value.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Luxury goods; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Price/status/authenticity binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Buyer, seller, inventory, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Provenance + condition + access + reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Operational field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 349-355; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 043 pp. 349-355.

109 to 044: consequential handoff

Collective agency and institutional choice -> Hospitality | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Hospitality: Guest needs, staff capacity, time, room state, logistics and locality.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Hospitality; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Booking/reservation state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Guest, staff, operator, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: End-to-end experience and workload orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Property-level A/B evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 356-362; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 044 pp. 356-362.

109 to 045: consequential handoff

Collective agency and institutional choice -> Travel and tourism | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Travel and tourism: Mobility, cost, safety, experience, local capacity and environment.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Travel and tourism; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Itinerary/booking schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Traveler, worker, resident, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Consequential itinerary/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Destination pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 363-369; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 045 pp. 363-369.

109 to 046: consequential handoff

Collective agency and institutional choice -> Art and cultural markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Art and cultural markets: Creative work, provenance, rights, cultural meaning, scarcity and audience.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Art and cultural markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Price/ownership/engagement proxy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Artist, audience, collector, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Rights/provenance/value-sharing architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Marketplace field study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 370-376; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 046 pp. 370-376.

109 to 047: consequential handoff

Collective agency and institutional choice -> Music and entertainment | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Music and entertainment: Creative contribution, rights, attention, audience value and platform economics.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Music and entertainment; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Stream/view count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Creators, audiences, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Contribution/provenance + value-distribution architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 377-383; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 047 pp. 377-383.

109 to 048: consequential handoff

Collective agency and institutional choice -> Gaming and virtual worlds | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Gaming and virtual worlds: Player goals, time, identity, economy, safety and creator contribution.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Gaming and virtual worlds; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Retention/spend metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Players, creators, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Cross-reality value and safety controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 384-390; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 048 pp. 384-390.

109 to 049: consequential handoff

Collective agency and institutional choice -> Sports and performance | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Sports and performance: Performance, health, training load, recovery, team dynamics and career horizon.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Sports and performance; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Win/score/output metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Athlete, team, family, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Load/recovery/career controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective team study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 391-397; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 049 pp. 391-397.

109 to 050: consequential handoff

Collective agency and institutional choice -> Experience design and events | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Experience design and events: Attention, emotion, logistics, accessibility, staff load and community impact.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Experience design and events; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Attendance/NPS/ticket revenue. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Guests, staff, locality. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: End-to-end experience-state orchestration. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Event A/B study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 398-404; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 050 pp. 398-404.

109 to 051: consequential handoff

Collective agency and institutional choice -> Currency and monetary experience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Currency and monetary experience: Purchasing power, liquidity, settlement, access, trust and macro context.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Currency and monetary experience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Nominal unit/FX quote. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Households, firms, intermediaries. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Consequential monetary-state and settlement architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Historical + prospective policy-neutral system test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 406-412; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 051 pp. 406-412.

109 to 052: consequential handoff

Collective agency and institutional choice -> Payments and remittances | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Payments and remittances: Amount, fees, FX, settlement time, access, fraud and recipient liquidity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Payments and remittances; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Successful transfer binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Sender, receiver, provider. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: End-to-end transfer optimization with transparent provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Transaction-level field test'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 413-419; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 052 pp. 413-419.

109 to 053: consequential handoff

Collective agency and institutional choice -> Banking and liquidity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Banking and liquidity: Deposits, credit, liquidity, capital, customer state and network exposures.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Banking and liquidity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Product/account or institution-local balance sheet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Banks, customers, counterparties, public. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Network consequential balance sheet + capacity buffers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Stress test + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 420-426; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 053 pp. 420-426.

109 to 054: consequential handoff

Collective agency and institutional choice -> Credit and underwriting | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Credit and underwriting: Cashflow, assets, obligations, trajectory, capability and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Credit and underwriting; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Static score/category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Borrower, lender, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Dynamic provenance/capacity underwriting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective lending trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 427-433; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 054 pp. 427-433.

109 to 055: consequential handoff

Collective agency and institutional choice -> Insurance and resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Insurance and resilience: Hazard, exposure, prevention, coverage, recovery and incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Insurance and resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Loss probability/policy class. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Policyholder, insurer, community. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Prevention + resilience + coverage architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Pilot product evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 434-440; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 055 pp. 434-440.

109 to 056: consequential handoff

Collective agency and institutional choice -> Capital markets and investing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Capital markets and investing: Price, cashflow, externalities, network risk and long-horizon value.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Capital markets and investing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Return/risk factor set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Investor, firm, workers, public, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Consequential asset ledger with carrier constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Historical backtest + prospective paper portfolio'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 441-447; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 056 pp. 441-447.

109 to 057: consequential handoff

Collective agency and institutional choice -> Private wealth and family capital | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Private wealth and family capital: Financial, human, social, health and intergenerational capital.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Private wealth and family capital; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Portfolio net worth. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Client, family, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Whole-capital balance sheet + goals/capacity controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal client evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 448-454; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 057 pp. 448-454.

109 to 058: consequential handoff

Collective agency and institutional choice -> Labor and talent markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Labor and talent markets: Capability, workload, pay, health, learning and opportunity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Labor and talent markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Job title/CV/credential. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Worker, family, employer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Capability-state + workload + mobility architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Workplace pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 455-461; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 058 pp. 455-461.

109 to 059: consequential handoff

Collective agency and institutional choice -> Organizations and enterprises | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Organizations and enterprises: Functions, dependencies, people, cash, knowledge and customer value.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Organizations and enterprises; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Department/KPI structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Workers, customers, suppliers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Enterprise consequential graph + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Multi-team field experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 462-468; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 059 pp. 462-468.

109 to 060: consequential handoff

Collective agency and institutional choice -> Entrepreneurship and venture creation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Entrepreneurship and venture creation: Unmet burden, carrier, willingness to pay, build cost and adoption.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Entrepreneurship and venture creation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Existing market category/TAM. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Founder initially, then customer/system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Mutual-Uptick blocker discovery + missing-capacity build. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Pilot venture with carrier ledger'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 469-475; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 060 pp. 469-475.

109 to 061: consequential handoff

Collective agency and institutional choice -> Artificial intelligence | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Artificial intelligence: Model state, source reality, user intent, provenance, uncertainty and downstream action.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Artificial intelligence; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Prompt/context window/model output. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: User, verifier, downstream system, compute. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Persistent schema/provenance layer + self-audit and escalation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Sealed cross-model benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 477-483; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 061 pp. 477-483.

109 to 062: consequential handoff

Collective agency and institutional choice -> Software systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Software systems: Requirements, dependencies, state, users, infrastructure and technical debt.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Software systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Feature/ticket/local module schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Developers, users, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Dependency/provenance graph + consequential release controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Repository-level prospective benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 484-490; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 062 pp. 484-490.

109 to 063: consequential handoff

Collective agency and institutional choice -> Cybersecurity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Cybersecurity: Actual attack graph, identities, vulnerabilities, privileges and attacker state.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Cybersecurity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Defender inventory/rules/log view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Systems, users, analysts, business continuity. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Self-updating attack schema + carrier prediction + safe containment/failover. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Red-team sealed telemetry benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 491-497; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 063 pp. 491-497.

109 to 064: consequential handoff

Collective agency and institutional choice -> Data infrastructure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Data infrastructure: Datasets, lineage, semantics, permissions, quality and downstream uses.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Data infrastructure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Table/file/schema local view. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Analysts, models, users, compliance. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Provenance graph + semantic reconciliation layer. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Enterprise data benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 498-504; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 064 pp. 498-504.

109 to 065: consequential handoff

Collective agency and institutional choice -> Privacy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Privacy: Data state, purposes, consent, exposure, value and future misuse.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Privacy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Consent checkbox or access-control list. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, organization, future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Selective disclosure + provenance + minimization architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Field trial + attack testing'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 505-511; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 065 pp. 505-511.

109 to 066: consequential handoff

Collective agency and institutional choice -> Digital identity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Digital identity: Attributes, credentials, context, revocation, privacy and trust.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Digital identity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single identifier/account. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, verifier, issuer. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Selective-verification credential graph. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Cross-service pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 512-518; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 066 pp. 512-518.

109 to 067: consequential handoff

Collective agency and institutional choice -> Internet and communications | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Internet and communications: Topology, capacity, latency, content, trust and user needs.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Internet and communications; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Throughput/uptime metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Users, networks, platforms. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Consequential routing + fidelity/provenance layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Network/application experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 519-525; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 067 pp. 519-525.

109 to 068: consequential handoff

Collective agency and institutional choice -> Media and information ecosystems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Media and information ecosystems: Claims, evidence, incentives, attention, creators and audiences.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Media and information ecosystems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Engagement/feed rank. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Audience, creator, public discourse. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Claim provenance + quality + incentive reconciliation. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Platform experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 526-532; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 068 pp. 526-532.

109 to 069: consequential handoff

Collective agency and institutional choice -> Language and translation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Language and translation: Meaning, context, culture, pragmatics and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Language and translation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Word/token correspondence. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Speakers, institutions, models. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Semantic/provenance translation with ambiguity tracking. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Blind human evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 533-539; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 069 pp. 533-539.

109 to 070: consequential handoff

Collective agency and institutional choice -> Knowledge and ontologies | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Knowledge and ontologies: Entities, relations, provenance, incompatible schemas and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Knowledge and ontologies; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single ontology/taxonomy. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Researchers, AI, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Cross-schema translation + minimal sufficient ontology. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Cross-domain benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 540-546; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 070 pp. 540-546.

109 to 071: consequential handoff

Collective agency and institutional choice -> Energy and power grids | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Energy and power grids: Generation, load, storage, network constraints, prices and reliability.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Energy and power grids; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Local device efficiency or node KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Grid nodes, customers, storage, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Consequential grid controller + capacity placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Grid simulation + pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 548-554; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 071 pp. 548-554.

109 to 072: consequential handoff

Collective agency and institutional choice -> Water and irrigation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Water and irrigation: Withdrawals, consumptive use, return flows, storage, aquifers and ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Water and irrigation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Farm/project efficiency. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Downstream users, rivers, aquifers, ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Basin-wide accounting + catchment + allocation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Basin holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 555-561; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 072 pp. 555-561.

109 to 073: consequential handoff

Collective agency and institutional choice -> Food and agriculture | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Food and agriculture: Yield, soil, water, inputs, nutrition, labor, market and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Food and agriculture; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Yield/acre or commodity price. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Farmer, consumer, soil, ecosystem. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Coupled regenerative production controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Multi-season farm trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 562-568; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 073 pp. 562-568.

109 to 074: consequential handoff

Collective agency and institutional choice -> Supply chains and logistics | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Supply chains and logistics: Inventory, demand, transport, suppliers, lead times and risk.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Supply chains and logistics; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Node-level cost/service KPI. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Suppliers, warehouses, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Carrier-aware flow controller + buffer placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Historical + live pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 569-575; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 074 pp. 569-575.

109 to 075: consequential handoff

Collective agency and institutional choice -> Manufacturing | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Manufacturing: Materials, energy, machines, labor, quality, maintenance and waste.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Manufacturing; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Unit cost/OEE. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Workers, machines, environment, customers. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Closed-loop production and maintenance architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Factory pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 576-582; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 075 pp. 576-582.

109 to 076: consequential handoff

Collective agency and institutional choice -> Waste and circular materials | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Waste and circular materials: Material composition, location, contamination, residual value and logistics.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Waste and circular materials; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Waste tonnage/disposal category. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Communities, environment, future production. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Material provenance + recapture + transformation capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Municipal/industrial pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 583-589; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 076 pp. 583-589.

109 to 077: consequential handoff

Collective agency and institutional choice -> Transportation and mobility | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Transportation and mobility: Trips, time, safety, access, energy, congestion and land use.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Transportation and mobility; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Vehicle throughput/speed. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Travelers, neighborhoods, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Multimodal consequential mobility controller. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'City corridor pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 590-596; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 077 pp. 590-596.

109 to 078: consequential handoff

Collective agency and institutional choice -> Cities and urban systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Cities and urban systems: Housing, jobs, transport, health, utilities, safety and public space.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Cities and urban systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Agency-by-agency city data. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Residents, agencies, infrastructure. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: City consequential digital twin + coordinated capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'District pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 597-603; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 078 pp. 597-603.

109 to 079: consequential handoff

Collective agency and institutional choice -> Climate and disaster resilience | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Climate and disaster resilience: Hazard, exposure, vulnerability, infrastructure, food, health and recovery.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Climate and disaster resilience; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Hazard forecast alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: People, infrastructure, ecosystems, economy. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Anticipatory catchment + prepositioned capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective matched pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 604-610; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 079 pp. 604-610.

109 to 080: consequential handoff

Collective agency and institutional choice -> Ecology and biodiversity | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Ecology and biodiversity: Species, habitats, flows, extraction, communities and climate.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Ecology and biodiversity; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Protected-area/local species metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Species, habitats, communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Landscape-scale leakage/carrier accounting + livelihoods. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Landscape holdout study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 611-617; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 080 pp. 611-617.

109 to 081: consequential handoff

Collective agency and institutional choice -> Cell biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Cell biology: Signaling, organelles, metabolism, damage, repair and cell-state transitions.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Cell biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single pathway/marker. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Organelles, pathways, neighboring cells. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Multi-state cellular controller + capacity targeting. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'In-vitro perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 619-625; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 081 pp. 619-625.

109 to 082: consequential handoff

Collective agency and institutional choice -> Molecular biology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Molecular biology: Molecules, conformations, binding networks, concentrations and kinetics.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Molecular biology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single interaction/target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Molecules, pathways, host system. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Reaction/network state model + off-target carrier control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Bench experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 626-632; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 082 pp. 626-632.

109 to 083: consequential handoff

Collective agency and institutional choice -> Nanotechnology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Nanotechnology: Particle properties, surfaces, transport, environment and biological interaction.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Nanotechnology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Particle spec alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Cells, environment, users. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Lifecycle and interaction-aware nano design. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Bench + environmental tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 633-639; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 083 pp. 633-639.

109 to 084: consequential handoff

Collective agency and institutional choice -> Chemistry and reaction systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Chemistry and reaction systems: Species, reaction network, kinetics, energy, byproducts and separation.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Chemistry and reaction systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Target yield/selectivity. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Reactor, environment, downstream process. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Consequential reaction-network optimization + recovery loops. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Reactor experiments'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 640-646; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 084 pp. 640-646.

109 to 085: consequential handoff

Collective agency and institutional choice -> Materials science | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Materials science: Microstructure, defects, stress, temperature, lifecycle and manufacturing.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Materials science; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Bulk property spec. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Material, structure, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Defect-aware multiproperty design + recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Lab characterization'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 647-653; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 085 pp. 647-653.

109 to 086: consequential handoff

Collective agency and institutional choice -> Classical mechanics and control | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Classical mechanics and control: Physical state, dynamics, sensors, actuators and disturbance.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Classical mechanics and control; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Partial state observation/local control objective. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Plant, actuator, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Representation-aware full-state controller + regenerative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Physical bench experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 654-660; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 086 pp. 654-660.

109 to 087: consequential handoff

Collective agency and institutional choice -> Thermodynamics and nonequilibrium systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Thermodynamics and nonequilibrium systems: Energy, entropy, gradients, reservoirs, flows and constraints.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Thermodynamics and nonequilibrium systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Local efficiency/temperature metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Reservoirs, environment, components. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Whole-boundary energy/exergy and recovery architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Physical experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 661-667; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 087 pp. 661-667.

109 to 088: consequential handoff

Collective agency and institutional choice -> Electromagnetism and circuits | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Electromagnetism and circuits: Fields, voltages, currents, topology, storage and losses.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Electromagnetism and circuits; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Local component state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Circuit elements, sources, loads. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Full-network state estimation + capacity/recovery placement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Bench circuit experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 668-674; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 088 pp. 668-674.

109 to 089: consequential handoff

Collective agency and institutional choice -> Quantum systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Quantum systems: Quantum state, observables, measurement, control and decoherence.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Quantum systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Accessible observable set. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Quantum system, apparatus, environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Constraint-respecting measurement/control schema + capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Laboratory quantum experiment'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 675-681; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 089 pp. 675-681.

109 to 090: consequential handoff

Collective agency and institutional choice -> Pure mathematics and formal systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Pure mathematics and formal systems: Objects, relations, axioms, language, proofs and translations.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Pure mathematics and formal systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Chosen signature/type system/quotient. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Proof system, translator, solver. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Minimal sufficient schema preserving required relations. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Machine-checked theorem suite'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 682-688; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 090 pp. 682-688.

109 to 091: consequential handoff

Collective agency and institutional choice -> Statistics and causal inference | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Statistics and causal inference: Data-generating process, sampling, measurement, confounding and uncertainty.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Statistics and causal inference; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Chosen model/estimand. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Decision makers, future samples, affected groups. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Provenance-aware multi-model causal state + identifiability guardrails. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Simulation + multi-dataset benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 690-696; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 091 pp. 690-696.

109 to 092: consequential handoff

Collective agency and institutional choice -> Logic and reasoning systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Logic and reasoning systems: Premises, inference rules, contradictions, uncertainty and goals.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Logic and reasoning systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single logical calculus. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Reasoner, downstream decision. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Multi-logic translation + contradiction provenance. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Formal benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 697-703; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 092 pp. 697-703.

109 to 093: consequential handoff

Collective agency and institutional choice -> Geography and territorial systems | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Geography and territorial systems: People, ecosystems, infrastructure, flows and administrative boundaries.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Geography and territorial systems; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Jurisdiction/map boundary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Border communities, watersheds, networks. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Flow-based territorial state model. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Regional pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 704-710; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 093 pp. 704-710.

109 to 094: consequential handoff

Collective agency and institutional choice -> Informal economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Informal economy: Real work, exchange, trust, risk and household needs outside formal records.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Informal economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Formal registry/tax/business schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Workers, households, state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Low-friction recognition, protection and access architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Field pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 711-717; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 094 pp. 711-717.

109 to 095: consequential handoff

Collective agency and institutional choice -> Illicit and black markets | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Illicit and black markets: Hidden demand, supply, coercion, enforcement, prices and harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Illicit and black markets; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Official market data that excludes hidden exchange. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Victims, communities, lawful firms, institutions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Lawful substitutes, prevention, provenance, treatment/rehabilitation and targeted enforcement. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Independent harm-reduction/public-safety evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 718-724; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 095 pp. 718-724.

109 to 096: consequential handoff

Collective agency and institutional choice -> Orbital and space economy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Orbital and space economy: Spacecraft, debris, spectrum, energy, logistics and operator incentives.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Orbital and space economy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Mission-local success metric. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Other spacecraft, operators, orbital environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Orbital consequential ledger + shared capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Simulation + mission pilot'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 725-731; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 096 pp. 725-731.

109 to 097: consequential handoff

Collective agency and institutional choice -> Extraterrestrial settlement | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Extraterrestrial settlement: Life support, energy, materials, health, governance and closed ecology.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Extraterrestrial settlement; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Earth-derived subsystem silos. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Crew, machines, habitat ecology. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Closed-loop consequential state + autonomous capacity construction. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Analog habitat + mission tests'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 732-738; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 097 pp. 732-738.

109 to 098: consequential handoff

Collective agency and institutional choice -> Astrobiology and biosignatures | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Astrobiology and biosignatures: Unknown life chemistries, environments, signals and contamination risks.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Astrobiology and biosignatures; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Earth-centric life schema. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Scientific program, environment, future missions. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Plural biosignature schema + provenance/contamination control. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Blind benchmark + mission data'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 739-745; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 098 pp. 739-745.

109 to 099: consequential handoff

Collective agency and institutional choice -> Planetary systems and stewardship | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Planetary systems and stewardship: Atmosphere, hydrology, geology, biosphere, resources and settlements.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Planetary systems and stewardship; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Sector-local resource model. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Settlements, ecosystems, future generations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Closed-loop planetary resource and restoration architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Earth analog + simulation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 746-752; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 099 pp. 746-752.

109 to 100: consequential handoff

Collective agency and institutional choice -> Unknown and not-yet-named realities | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Unknown and not-yet-named realities: Any newly observed substrate, scale, agent, value dimension or exchange mode.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Unknown and not-yet-named realities; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: No adequate schema exists yet. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Unknown until carrier tracing identifies it. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Instantiate M_d, define schema, measure gap, trace carrier, construct capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Freeze kernel before learning outcomes; then holdout/replicate'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 753-759; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 100 pp. 753-759.

109 to 101: consequential handoff

Collective agency and institutional choice -> Conscious experience and self-model | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Conscious experience and self-model: Perception, affect, memory, self-model, attention, internal accessibility and embodied state.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Conscious experience and self-model; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: A receiving observer reduces another system to behavior, category or output alone. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Experiencing system, observers, dependent systems and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Cross-modal state representation with provenance, uncertainty and non-erasure constraints. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective multi-method cross-observer study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 761-767; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 101 pp. 761-767.

109 to 102: consequential handoff

Collective agency and institutional choice -> Choice and option topology | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Choice and option topology: Actual options, perceived options, cost, risk, time, capacity, knowledge, coercion and expected consequence.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Choice and option topology; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Binary free-choice / no-choice label. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Chooser, affected people, institutions and future option set. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Feasible-option map plus prebuilt low-friction lawful/prosocial pathways. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective choice-topology intervention'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 768-774; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 102 pp. 768-774.

109 to 103: consequential handoff

Collective agency and institutional choice -> Truth, deception and disclosure | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Truth, deception and disclosure: Belief, evidence, incentives, threat, reputation, disclosure cost, dependency and repair capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Truth, deception and disclosure; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Truth/lie binary detached from consequence topology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Speaker, listener, harmed parties, institutions and future trust network. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Verification, safe disclosure, correction, restitution and transition capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Sealed truth-cost / disclosure study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 775-781; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 103 pp. 775-781.

109 to 104: consequential handoff

Collective agency and institutional choice -> Responsibility and causal attribution | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Responsibility and causal attribution: Knowledge, foresight, control, alternatives, coercion, causal contribution, action and resulting displacement.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Responsibility and causal attribution; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Moral label detached from the action-producing state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Actor, victims, institutions, community and future actors. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Causal-attribution ledger integrating option topology, foreseeability, control, harm and repair. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Blinded case reconstruction with preregistered causal criteria'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 782-788; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 104 pp. 782-788.

109 to 105: consequential handoff

Collective agency and institutional choice -> Consent, coercion and autonomy | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Consent, coercion and autonomy: Information, power, alternatives, dependency, exit, reversibility, time pressure and capacity.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Consent, coercion and autonomy; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Signed/expressed consent treated as sufficient state. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Decision maker, counterparties, dependents and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Real exit, recourse, reversible consent, information symmetry and alternative capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective consent-quality audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 789-795; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 105 pp. 789-795.

109 to 106: consequential handoff

Collective agency and institutional choice -> Addiction, compulsion and short-horizon relief | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Addiction, compulsion and short-horizon relief: Distress, reward, relief, dependence, physiology, social setting, opportunity and future option set.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Addiction, compulsion and short-horizon relief; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Substance/behavior category or abstinence binary. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Person, body, relationships, household, community and future self. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Replacement regulation capacity plus medical/social/economic support matched to the absorbed burden. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal regulated intervention with multi-carrier outcomes'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 796-802; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 106 pp. 796-802.

109 to 107: consequential handoff

Collective agency and institutional choice -> Crime, violence and reconciliation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Crime, violence and reconciliation: Actor state, victim state, opportunity, motives, option topology, weapons/access, social environment and foreseeable harm.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Crime, violence and reconciliation; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Offense label or actor-only risk score. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Victims, actor, families, community, institutions and future potential victims. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Prevention, containment where needed, restitution, rehabilitation and reintegration capacity in one ledger. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal controlled justice-program evaluation'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 803-809; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 107 pp. 803-809.

109 to 108: consequential handoff

Collective agency and institutional choice -> Animal sentience and welfare | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Animal sentience and welfare: Physiology, behavior, social state, environment, pain/pleasure proxies, health and life trajectory.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Animal sentience and welfare; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Commodity/yield schema that excludes the animal as a carrier. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Animals, workers, consumers, farmers, land, ecosystems and communities. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Welfare, alternative-production, livelihood-transition and ecological capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Multi-carrier welfare, nutrition and livelihood trial'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 810-816; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 108 pp. 810-816.

109 to 109: consequential handoff

Collective agency and institutional choice -> Collective agency and institutional choice | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

INTERFACE AND COUPLING STATUS

This is a within-domain loop: the post-state of Collective agency and institutional choice becomes the next native state under its existing map. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Organization treated as a single actor without internal carrier structure. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Prospective institutional decision audit'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 817-823; WITHIN-DOMAIN RECURRENCE. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 109 pp. 817-823.

109 to 110: consequential handoff

Collective agency and institutional choice -> Human-AI co-agency | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Human-AI co-agency: Human intent, model state, training/provenance, tools, permissions, action, reversibility, dependency and downstream effects.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Human-AI co-agency; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Model output or benchmark score treated as the whole system. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: User, non-user, model operator, workers, institutions, infrastructure and environment. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Persistent provenance, human control, reversibility, portability, verification and receivingcapacity layers. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Sealed native-vs-K_R assisted agent benchmark'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 824-830; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 110 pp. 824-830.

109 to 111: consequential handoff

Collective agency and institutional choice -> Evolution and natural selection | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Evolution and natural selection: Genotype, phenotype, environment, mutation, recombination, drift, selection, gene flow and lineage history.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Evolution and natural selection; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Fitness proxy or single-trait narrative. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Individuals, lineages, populations, interacting species and ecosystems. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Diversity, ecological capacity and intervention guardrails where deliberate action exists. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Time-locked population/genomic holdout'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 832-838; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 111 pp. 832-838.

109 to 112: consequential handoff

Collective agency and institutional choice -> Reproduction, inheritance, mitosis and meiosis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Reproduction, inheritance, mitosis and meiosis: Chromosomes, cell-cycle state, replication, recombination, segregation, repair and developmental context.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Reproduction, inheritance, mitosis and meiosis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Outcome-only birth/division count. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Parent cell/organism, daughter cells, gametes, offspring and lineage. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Checkpoint, repair, redundancy and developmental-support capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Lineage-resolved perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 839-845; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 112 pp. 839-845.

109 to 113: consequential handoff

Collective agency and institutional choice -> Development and morphogenesis | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Development and morphogenesis: Gene regulation, gradients, cell fate, tissue geometry, signaling, mechanics, resources and developmental time.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Development and morphogenesis; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Single marker or endpoint morphology. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Cells, tissues, organs, organism and developmental future state. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Stage-aware multi-pathway support, repair and resource architecture. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Longitudinal developmental perturbation study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 846-852; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 113 pp. 846-852.

109 to 114: consequential handoff

Collective agency and institutional choice -> Metabolism, diet and consumption | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Metabolism, diet and consumption: Incoming matter/energy/information, digestion, transport, microbiome, storage, elimination and metabolic regulation.

INTERFACE AND COUPLING STATUS

Proposed interface from Collective agency and institutional choice into Metabolism, diet and consumption; a physical, institutional or informational pathway must first be observed before a causal edge can be asserted. No edge is presumed to exist solely because both domains appear in the Atlas.

SCHEMA TRANSFORMATION

Source's limited view: Organization treated as a single actor without internal carrier structure. Receiver's limited view: Calories/macros or one nutrient target. Design a non-lossy handoff or explicitly record what is dropped.

WHO COULD CARRY THE BURDEN?

Origin carriers: Members, minorities, leaders, outsiders, institutions and future administrations. Candidate receiver carriers: Gut, microbiome, liver, tissues, household, food system and future organism. Each must be assessed in native units, including time-shifted burdens.

CANDIDATE CONSTRUCTIVE BRIDGE

Origin capacity: Distributed decision provenance, dissent channels, accountability and cross-boundary capacity. Receiving capacity: Adaptive conversion, buffering, storage, elimination and access capacity. Specify which receiving bottleneck a verified interaction would actually encounter.

MINIMUM DECISIVE EXPERIMENT

Pair a native study of 'Prospective institutional decision audit' with a receiver study of 'Controlled longitudinal multi-carrier nutrition study'. Preserve matched baseline, causal identification, resource parity and follow-up.

INTERPRETATION AND GATE

Original source pp. 817-823 and 853-859; CROSS-DOMAIN POTENTIAL HANDOFF. Not evidence that either implementation has reached Mutual Uptick.

Source: Atlas Adapter 109, pp. 817-823 (Rufino 2026). Receiver Adapter 114 pp. 853-859.

109 to 115: consequential handoff

Collective agency and institutional choice -> Predation, livestock and food-system transformation | candidate causal interface

ANALYTICAL COUPLING / REAL EDGE NOT YET IDENTIFIED

ORIGINATING DOMAIN AND STATE

Collective agency and institutional choice: Shared beliefs, rules, authority, voting, incentives, information, dissent, enforcement and institutional memory.

PROPOSED RECEIVER AND STATE

Predation, livestock and food-system transformation: Predator-prey relations, husbandry, feed, land, labor, animal state, nutrition, culture, price and ecology.

INTERFACE AND COUPLING STATUS
